Shayln,

Sorry for the delay. Our first special session was last week so kinda hectic. Settled in now. Let me look into this with our DNR Secretary and circle back shortly. Look forward to catching up.

Thank you. Kyle

Hi Kyle: I hope you are getting settled! Would love to touch base with you whenever you get a moment re: Washington Mardi Gras and this policy issue below that is impacting VG and other LNG export facilities…

FT: US energy security role in question as gas exports receive new scrutiny
Some Biden administration officials push review of approval process for LNG terminals

The US natural gas industry is on high alert as the Biden administration reconsiders the way it licences massive new export terminals for the fuel, under pressure from climate campaigners escalating a fight against fossil energy infrastructure. Construction of liquefied natural gas terminals along the Gulf of Mexico and Atlantic coasts have vaulted the US above Qatar as the top global LNG exporter, enabling it to replace critical European supplies after Russia's full-scale invasion of Ukraine.

The multibillion-dollar terminals have also become targets for climate activists who argue they lock in dependence on planet-warming fossil fuels for decades. Activists have intensified their campaign as President Joe Biden seeks re-election this year. Campaigners have urged the US Department of Energy to update how it decides whether new LNG export projects are in the "public interest".

They want it to delay approval of Venture Global's CP2 terminal in Louisiana, which is next in line for a permit and one of the largest projects along the Gulf coast. Such authorisations, for exporting LNG to countries that lack a free trade agreement with the US, have been routine since the first projects were proposed more than a decade ago. Some Biden officials were now pushing for a significant review of the approval process, arguing that there was a better understanding of the environmental impact caused by infrastructure leaks and emissions, said a source with knowledge of the discussions who cautioned that no decision had been taken.

Industry executives say such a review would serve as a de facto moratorium on new projects, and warned of grave consequences as a result. "Any infringement of US supply would have the same impact on the global economy as an economic sanction and would cause ripple effects spanning from deindustrialisation to food insecurity," said Mike Sabel, chief executive of Venture Global.

Together with a neighbouring project under development, Venture's CP2 would give the company alone an export capacity of more than 65mn tonnes of LNG a year, second only to Qatar. Activists have dubbed the project a "carbon bomb". "If the industry builds out everything it wants, there will be more greenhouse gases from US-exported LNG than from everything that happens in the continent of Europe," said Bill McKibben, head of climate campaign group 350.org. "That's why we're asking the Department of Energy to halt new permits while they refigure their formula for deciding what's in the public interest." Some local activists in Louisiana and Texas are also protesting LNG expansion. "We can't be approving more facilities and out of the same mouth talking about reaching climate goals and talking about phasing down fossil fuels," said Roishetta Sibley Ozane, an activist based in Sulphur, Louisiana.

The US became the world's largest LNG exporter in 2023. Its seven existing terminals can produce as much as 86mn tonnes a year, according to the Energy Information Administration — enough to satisfy the combined gas needs of Germany and France. Five more projects under development will add another 73mn tonnes a year and the energy department is reviewing proposals for at least another 16.

The activists' campaign spotlights a dilemma for Biden, who promised on the campaign trail to lead a transition away from fossil fuels but has witnessed record levels of US oil and gas production and exports. After Russia's invasion of Ukraine, he encouraged the growth of US LNG to shore up European supplies. In November, more than 60 Democratic lawmakers called on the energy department to reassess how it determines whether new LNG projects are in the public interest citing "climate" concerns.

The American Petroleum Institute said that any Biden administration review of LNG approvals was a "really, really big deal", which threatened to shut down development of the industry and undermine Europe's energy security. "What I think this means is that is least for 2024, there would be no permits granted for LNG export in the United States," said Mike Sommers, API chief executive. "There is no reason to proceed with the development of a new LNG terminal if you don't have permission to export it."

Nick Dell'Osso, chief executive of gas producer Chesapeake Energy, said it was critical that regulators understood that as demand for the commodity booms, "the US is the most stable place from which to receive it".

Securing Energy for Europe, a large state-owned energy company in Germany, wrote to US regulators in December urging them to approve Venture's CP2, arguing it was "vital to Germany's energy security". Japanese power company Jera wrote a similar letter in support of CP2.

But analysts said there was a change of mood within the Biden administration in the run-up to the 2024 election. "The LNG industry — after touting its role in helping Europe survive a near-cut-off of Russian gas — now faces new scrutiny," said Ben Cahill, senior fellow at the Center for Strategic and International Studies.

Kyle:

We read a Bloomberg report this afternoon (included below) which indicated that language is being considered by the GOP as part of the Ukraine supplemental that would approve 4 projects but exclude CP2 LNG. The non-FTA application for CP2 has been in front of DOE since December of 2021. CP2 received its FEIS from FERC over eight months ago. In other words, it is absolutely ripe for approval.

Below is some background for your consideration. I am also attaching a chart that S&P released this week with LNG projects that are awaiting approval, and it clearly shows CP2 is by far the most commercially advanced project that will actually happen. This would be why the White House may not want it in a package. They can claim they approved projects, knowing that most of them will never get built.

What's wrong with the LNG language reportedly in play? It fails to recognize that:

- Approving only the 4 projects (Port Arthur 2, Commonwealth, Magnolia & Lake Charles) does not move the needle to bring US LNG supply to the market.

Why?

- With the exception of Lake Charles (which has been denied an extension to their permit from DOE), **the other 3 projects either do not have contracts, have minimal contracts, or have only signed non-binding HOAs.**

Why does CP2 need to be included?

- CP2 is the only project impacted by the pause that is the furthest commercialized with significant binding offtake contracts (the entirety of Phase One).
- Venture Global has fully sold/commercialized all of phase one of the project with binding contracts with allies including Germany (ENBW and SEFE), Japan (JERA and INPEX) as well as other portfolio players.

- CP2 is the only project with the financing to immediately move forward and bring new U.S. LNG into the market.

- CP2 is a 20-billion-dollar investment based in the State of Louisiana that will support tens of thousands of jobs.

- Venture Global is already over $2 Billion dollars into construction at CP2 (because we are unique and construct our modules and other equipment at offsite facilities)

- CP2 has gotten its DOE FTA, Final Environmental Impact Statement form FERC and is awaiting a final Commission vote expected at the end of April and DOE non-FTA approval.

- What is also at DOE is a CP uprate, which is very small .4MTPA upsizing of Calcasieu Pass.

BLOOMBERG:

GOP Considering Requiring LNG Approvals in Ukraine Aid (Correct)
By Ari Natter, Erik Wasson and Billy House | April 4, 2024 2:00PM ET

- House language under review would lift freeze on some projects
- Facilities by Commonwealth, Magnolia could be green-lighted

Corrects language in the third paragraph referencing House Democratic leaders.

Republican House leadership is considering including a provision in a potential aid package for Ukraine that would require the Biden administration to approve some liquefied natural gas export projects, according to people familiar with the matter.

The wording, which has yet to be finalized, could set a threshold that effectively requires some LNG export projects that are awaiting approval by the Department of Energy to be green-lighted, one of the people said. The situation remains fluid and discussions on the matter remain in flux, said the person, who was granted anonymity to discuss non-public deliberations.

It remains to be seen if the package that Speaker Mike Johnson brings to the floor, which could also include border security reforms, could get the needed votes to pass the House and if President Joe Biden would sign it into law. A White House spokesperson previously said a report that White House aides were open to lifting the ban "is not true." House Democratic leaders are aware of the language and are opposed, two Democrats said. Its passage would alienate progressives, whom Biden has already angered over his handling of Israel as well as the approval of a massive oil drilling project in Alaska.

A spokesperson for Johnson, who has previously argued the administration's LNG permit pause is hurting Ukraine by increasing reliance on Russian natural gas, declined to comment Thursday.

Projects considered "ripe" for decision before the Energy Department because they have received requisite approvals by the Federal Energy Regulatory Commission include LNG export facilities in Louisiana proposed by privately held Commonwealth LNG, Magnolia LNG, as well as the Lake Charles export project planned by Energy Transfer LP and an expansion of an Sempra's existing LNG export facility in Port Arthur, Texas. Notably, such an approach would not benefit the CP2 massive export facility also in Louisiana planned by Venture Global LNG Inc. which is still pending before FERC.

Johnson, speaking in an Easter interview on Fox News Sunday, hinted that he planned to bring a Ukraine aid package that could include language reversing the permitting pause to the floor after the House returns from its spring recess April 9.

Read More: Biden Freezes Licenses to Export Gas, Imperiling Projects

The Biden administration ordered the halt in approving new licenses to export LNG to European and some Asian countries that are not US free-trade partners while the Energy Department scrutinizes how the shipments affect climate change, the economy and national security. The moratorium threatens to disrupt plans for multibillion-dollar export projects along the US Gulf Coast.

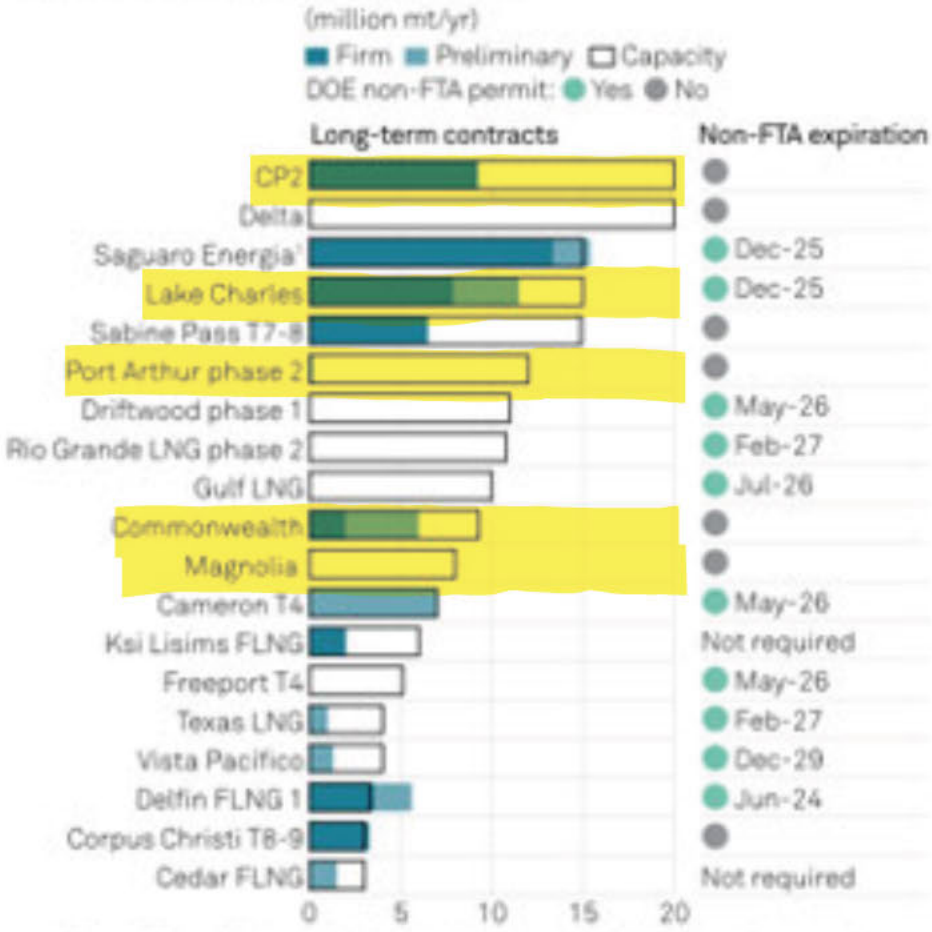

While the administration isn't inclined to trade away the pause, the president's support could hinge on how such a measure is worded, Clearview Energy Partners said in a note Wednesday, that added one possible approach Johnson may take could be to condition funding in the supplemental on the approval of a specific amount of export capacity.

"If he had no other option, we believe President Biden might sign a bill which merely blocked the pause, as the DOE still could retain discretion over the pace" of LNG export approvals, the Washington-based consultancy said. "However, if the bill were to mandate approvals, we think it could draw a veto."

The inclusion of language rolling back the administration's LNG permit pause could entice some previously reluctant Republicans to vote for the Ukraine aid package by giving them a win in blocking a Biden climate priority and a chance to argue they are countering Russia and helping American natural gas producers. But the move would also alienate Democrats whose support would be needed to pass the measure and are pushing back strongly against the measure's inclusion.

"The vast majority of our caucus would see this as going backward on climate at the worst possible time," said Representative Jared Huffman, a California Democrat. "We have the votes to pass Ukraine aid without doing a Faustian deal."

Selected projects targeting FID

1) Saguaro Trains 1-2 have a non-FTA permit. The proposed Train 3 has an application pending.

The permits at issue under the US pause allow LNG exports to countries that lack free trade agreements with the US. Projects in Mexico need the approvals because they would use US feedgas.

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Based on Estimates Generated by LED in March '24

CP2

- 10-year Abatement on Terminal Property Tax Protects 80% of Capital Investment
    - Note: ITEP previously (& for Plaq and CP1) covered 100% of cap ex on Terminals for 10 years (it was reduced to 80% exemption during the Bel Edwards Administration)
    - Abatement Period Ends 10 years from the date when Full Operations are achieved (for CP2, abatement period is assumed to end in 2039)

- Expected to create approximately **1,400 new jobs** (400 of which are direct at CP2)
  Note: average compensation (excl. benefits) for permanent CP2 jobs = $140k

- Cameron Parish Property Taxes During the 10-Year Abatement (applied against 20% of Capital Investment on the Terminal + Property Taxes on Cap Ex for Pipeline from day 1 of operations of CPX) Period: **$1.9 Billion**, broken out as follows:
    - Parish Taxes – $774m
    - Road Taxes - $85m
    - School Taxes – $441m
    - Drainage taxes – $59m
    - Other/Misc. Parish Taxes - $547m

- Cameron Parish Property Taxes During the 20-YearsFollowing Abatement (2039-2059): an additional **$2.4 Billion**

- Total Estimated Cameron Parish Property Taxes thru 2059: **$4.3 Billion**

Plaq LNG

- 10-year Abatement on Terminal Property Tax Protects 100% of Capital Investment
    - Abatement Period is assumed to end in 2036

- Expected to create approximately **1,400 new jobs** (400 of which are direct at CP2)
  Note: average compensation (excl. benefits) for permanent Plaq jobs = $140k

- Plaquemines Parish Property Taxes During the 10-Year Abatement Period: **$209 Million**, broken out as follows:
    - Parish Taxes - $120m
    - Road Taxes - $5m
    - School Taxes - $84m

- Plaquemines Parish Property Taxes During the 20-YearsFollowing Abatement (2036-2056): an additional **$898 Million**

- Total Estimated Plaquemines Parish Property Taxes thru 2056**: $1.1 Billion**

CP2 + Plaquemines

- Expected to create approximately **3,000 high-paying jobs** (direct + indirect)
- Expected to pay more than **$2 Billion** of Parish Property taxes during the ITEP Abatement Period (between now and 2039, about $130m per year on average)
- Expected to pay approximately **$5.5 Billion in** total Parish Property taxes during construction and operations (between now and 2059, about $140m per year on average)

NOTES to Explain Material Differences Between the Plaq and CP2 Property Tax Estimates

1) Property taxes in Plaq Parish are very low vs. most other Parishes in Louisiana and they are significantly lower than Cameron property taxes, specifically: Plaq taxes are at 70 mills vs. Cameron at 170 mills
2) CP2's cap ex is $3.5b higher than that assumed for Plaq ($22b vs. $18.5b)
3) The ITEP protection (for the LNG terminals) is different: Plaq's terminal is 100% exempt from tax for 10 years; CP2's terminal is 80% exempt from tax for 10 years

JT, Kyle, Julia and Andrew:

Thank you again for taking the time to meet with me last week. I enjoyed our discussion and the opportunity to meet you.

I'm following up to provide the Cooperative Endeavor Agreement I mentioned last week between Venture Global and the Plaquemines Parish Government. We are funding the rehabilitation of the Parish's Point Celeste Pump Station under this CEA. Kyle, I believe, requested a copy of it and I have attached it for your reference. I'm happy to discuss it live if that would be helpful.

I'm also attaching an update note re: our Plaquemines LNG project that we sent to the Plaquemines Parish Council, President, Sheriff & School Superintendent last month. The update covers a range of topics, including taxes we've paid to PPG/School District ($330m by year-end 2024); permanent operations jobs we've filled at our Plaquemines Facility (nearly 500, > 90% to LA residents); the growth of our technical training programs (provided to residents free of charge) in Plaquemines Parish (via partnership with PP School Board + Nunez CC); the various community initiatives & events we've sponsored in 2024 (> 90 YTD); and the funding we've provided to the Plaquemines Port so far (>$60m). If you have questions or would like to discuss any of these topics, please just let me know.

I look forward to seeing you again sometime soon, and I hope that you and your families have a great Thanksgiving.

Millard, Commissioner Cormier and Kyle:

Good day.

I wanted to circle back to see if you might be available to meet next Wednesday 13th or Thursday (14th)?

Any time those days will work for me if you have availability.

Please let me know when you have a moment.

And if next week does not work, how about the following Wednesday (20th) or Thursday (21st).

I look forward to meeting you.

Thank you,

Commissioner Cormier, Deputy Chief of Staff Ardoin and Millard--- I'd like to introduce/reconnect you to Fory Musser; he is the Senior VP of Development at Venture Global LNG and is cc'd on this email.

Fory and I were chatting about rail/port/multimodal approaches for Venture Global both in Plaquemines and Cameron Parishes and I thought it would be appropriate to get everyone connected on those fronts.

Maybe we can set up a call or meeting in the near future.

Best,

JTH

COOPERATIVE ENDEAVOR AGREEMENT

This COOPERATIVE ENDEAVOR AGREEMENT ("CEA") is made and entered into as of this 23rd day of May, 2024 by and between Plaquemines Land Ventures, LLC ("**PLV**") and the Plaquemines Parish Government ("**PPG**"), a political subdivision of the State of Louisiana, whose address is 333 F. Edward Hebert Blvd., Belle Chasse, LA 70037.

RECITALS

WHEREAS, Article VII, Section 14(C) of the Louisiana Constitution provides that the state and its political subdivisions or political corporations may engage in cooperative endeavors with each other, with the United States or its agencies, or with any public or private association, corporation, or individual; and,

WHERAS, PPG owns and operates the Pointe Celeste Pumping Station ("**Pumping Station**") which is located in Pointe Celeste, Louisiana, Plaquemines Parish; and

WHEREAS, the Pumping Station is in need of the approved and agreed upon repairs and improvements as set out in Exhibit A (the "**Work**"); and

WHEREAS, PLV a private, non-Louisiana business entity doing business in Plaquemines Parish, desires to complete the work through third party contractors at PLV's own cost and expense; and,

WHEREAS, PPG agrees to allow PLV and the Contractors access and to the Pumping Station to effect such repairs and improvements; and,

WHEREAS, PPG and PLV intend to enter this CEA as contemplated by the Louisiana Constitution, NOW THEREFORE, in consideration of the premises, representations, warranties, covenants, agreements and undertaking hereinafter made, the Parties agree as follows:

AGREEMENT

A. PPG'S RESPONSIBILTIES:

1. PPG shall:

a. Provide PLV and the Contractors access to the Pumping Station, with minimal interruption or interference from the public, to allow for the organized and agreed upon sequencing and completion of the Work; and

b. Maintain ownership, possession, control and garde of the Pumping Station prior, during and after completion of the Work.

c. Upon completion of the Work, PPG shall staff and operate the pump station during inclement weather events; provide an adequate fuel supply to operate the pump station for extended periods; and conduct routine scheduled maintenance to ensure readiness and reliability of pump station. This Section A.1.c. shall survive the expiration or temriantion of this Agreement.

B. PLV'S RESPONSIBILITY:

a. PLV shall complete or cause third party contractors (the "**Contractor(s)**") to complete the Work, at PLV's cost and expense,

b. In connection with the Work, PLV shall require that the Contractors:

i. Perform the Work in a good and workmanlike manner; and

ii. Maintain the insurance coverage outlined in Exhibit B attached hereto (the "**Insurance Policies**") and include PPG as an additional insured on the Insurance Policies (except for Workers' compensation Insurance and Property Insurance).

c. Upon completion of the Work, PLV shall:

i. Transfer any warranties for the Work from the Contractor(s) to PPG including any warranty of fitness, workmanship, and materials.

ii. Assign all contracts and agreements in respect of the Work from the Contractors to PPG.

C. JOINT RESPONSIBILTIES:

a. PLV and PPG agree to work cooperatively and expeditiously to allow for the timely completion of the work as outlined and agreed upon in the scope of services as outlined in "Exhibit A"

   i. PPG shall designate Jonah Arceneaux; a member of the Engineering Department; and Donald Ragas Jr; Supt. of Flood Control to work collectively with PLV's engineering designee, Robert Havlik; to ensure the work being performed as outlined in the scope of services is to the standards and statisfaction to PPG and PLV;

b. No change to the scope or plan for the work shall be made without mutual agreement of PPG and PLV.

INDEMNIFICATION

PLV agrees to defend, indemnify, and hold harmless PPG and its members, directors, officers, employees, agents, successors, assigns and its related entities for all claims, causes of action and/or lawsuits, judgments, damages arising in connection with the completion of the Work, and further, including but not limited to, any such claims, causes of action and/or lawsuits arising from the negligence, fault, intentional act or willful and wanton misconduct of PLV, its employees, agents, invitees, visitors, or contracting parties.

PPG agrees to defend, indemnify, and hold harmless PLV and its members, directors, officers, employees, agents, successors, assigns and its related entities for all claims, causes of action and/or lawsuits, judgments, damages arising from negligence, fault, the intentional acts or willful and wanton misconduct of PPG, its employees, agents, invitees, visitors, or contracting parties, or arising from vices or defects related to the structural components of the Pumping Station which are not included in the Work, including but not limited to, the exterior walls, load-bearing interior walls, and roof, or vices or defects involving asbestos or lead-based paint or other environmental hazards, if any.

START DATE AND TERM

PLV and PPG agree that PLV and the Contractors may start implementing the Work upon execution of this CEA by both parties hereto, and that the CEA will terminate upon PPG's acceptance of the Work (provided that the Work shall be deemed accepted and acceptable unless PPG provides written notice of any deficiencies within thirty (30) days of completion as notified by PLV), except for insurance and indemnity obligations provided herein.

ENTIRE AGREEMENT

With regard to the subject matter hereof, this CEA, including any attachments that are expressly referred to in this CEA contains the entire agreement between the parties hereto and supersedes any and all agreements or contracts previously entered into by the Parties. No representations were made or relied upon by either party, other than those expressly set forth in this CEA.

LEGAL COMPLIANCE

PPG shall comply with all federal, state, and local laws and regulations, including, specifically, the Louisiana Code of Governmental ethics (R.S 42:1101, *et seq.*) in carrying out the provisions of this CEA. PLV shall comply with all applicable federal, state, and local laws and regulations in carrying out the provisions of this CEA.

RELATIONSHIP OF THE PARTIES

PLV shall not be construed to be an employee, agent, partner, representative of, or in joint venture with, PPG.

AMENDMENT

Any alteration, variation, modification, or waiver of any provision of this CEA shall be valid only when it has been reduced to written form and executed by the parties hereto.

CHOICE OF LAW

The validity, interpretation, and performance of this CEA shall be controlled by and construed in accordance with the laws of the State of Louisiana and venue for the adjudication or alternative dispute resolution of any and all claims shall be in the 25th Judicial District for the Parish of Plaquemines, State of Louisiana.

MULTIPLE ORIGINALS

This CEA may be executed in multiple counterparts, all of which shall constitute one and the same agreement and each of which shall be deemed an original.

IN WITNESS WHEREOF, PLV and PPG have executed this CEA as of the 23rd day of MAY, 2024.

Scope of Work

partco LLC

108 Southpark Road

Lafayette, La. 70508

337-270-5454

5/20/2024

Attn: Charlie Burt,

As per our discussion on the time frame of combining phase 1& 2, we will be able to work the job as outlined below: A detailed project schedule will be provided.

Partco LLC will provide the supervision, labor, tools, required equipment, consumables and supplies to perform the subsequent work tasks:

1. MSA and Task order executed.
2. Order rebuilt 0 hour diesel engines for #3&4 pumps. (Three-week delivery to our shop)
    a. Caterpillar C13
    b. Horsepower - 480HP @2300rpm, 360hp @1500rpm
    c. Rebuilt w/ a 1 yr warranty
3. Schedule crane and welder.
4. The day prior to the crane arrival, we will go unbolt, and disconnect the #4 pump.
5. The pump and gear box will be pulled and loaded on the truck headed to the machine shop. (Disconnecting will take one day and loading out will take one day).

Gear and Pump Repairs will consist of:

The gear boxes will be disassembled and cleaned. They will be inspected for all clearances and wear patterns. All new seals and bearings will be ordered and installed. If new gears are needed, all involved will be notified. The gears from Philadelphia Gear are extremely expensive and have a very long delivery time. The internal lube lines will be pressure tested and checked for leaks. Any repairs needed will be done. The oil pump will be disassembled, checked and repaired or replaced if needed. The unit will be reassembled and ready for install.

The pumps will be disassembled, and all external pieces will be blasted and coated for inspection. All of the internals will be checked for wear, and clearances. New bushings will be manufactured and installed. New shafts will be made where needed. The impellers will be repaired where possible. If non-repairable, everyone involved will be notified immediately. The pump will be reassembled with all repairs made back to factory specifications, and with new lube lines to all bushings. All lube lines will be protected from debris everywhere possible.

6. Drain and move fuel tanks while crane is on location.
    a. Fuel tanks will be drained/filtered into cutting boxes. Additional 500 gallon fuel tanks will be in place and used while the permanent tanks are being relocated and installed.
7. Install new fuel lines while repairing trash screens. (Two weeks)
    a. New Fuel lines will consist of a 4" main header off of tank, with (2) 2" socket welded sch 80 pipe
8. Pull the trash screens from the #1 and 2 pump suction area, repair and reinstall. Then pull the trash screen on #3 &4 repair and reinstall these as well. (Two weeks in at this point)
9. Complete new fuel lines.
10. Remove roof over #3 & 4 engines and install new engines. (Three weeks in)
11. Reinstall roof and repair as needed. (Four weeks in)
12. All fuel lines and trash rakes are completed. New engines are in place.
13. Install pump and gear box from unit #4 is repaired (estimated time frame of 4-5 weeks from removal) we will have the crane available to pull the #2 gear box and pump to send it to the machine shop for repair.
14. Install the repaired pump in place of the #2 pump and gear box. (2 days total) Estimated time frame to have #2 pump up and completely functional is 5 to 6 weeks.
    a. ***Key Milstone***
15. Finish tie ins on the two new engines. (Exhaust, coolant lines, alignments, and drive shaft repairs). (6 to 7 weeks in at this point)
16. Install repaired pump and gear box on #4 engine. (11 to 13 weeks)
17. Pull #3 pump and gear box for repairs.
18. Install final pump and gear box. Station complete at 100% in 17 to 18 weeks.
19. Final Walkthrough

- Estimated Project Start Date: 5-23-24
    - Key Milestone Date: 7-15-24: #2 Unit 100% Capacity
- Estimated Project Completion Date: 10-3-24

Estimated Cost of Project: $1,122,000.00 (one million, one hundred twenty two thousand)

PROPIETARY STATEMENT:

This information is confidential and is the property of Partco LLC and shall be retained in confidence by the recipient and shall not be published or otherwise disclosed to third party. Partco LLC would like to thank you for the opportunity to bid on this project, if you have any questions please call or contact Partco LLC by phone or email.
Sincerely,

Charlie Cook

Field Service Manager

Partco LLC

[redacted] **Cell**

Exhibit B

Insurance Policies

Contractors shall secure, pay for, and provide, at no additional cost or expense to PPG, the following insurance coverages:

(a) **Workers' Compensation Insurance** with statutory limits in accordance with all applicable state, federal and maritime laws, and **Employer's Liability Insurance** with minimum limits of **$1,000,000 per accident/occurrence** for each bodily injury by accident, and **$1,000,000 per occurrence and $1,000,000 in the aggregate** for each employee for disease. No "alternative" forms of coverage will be permitted. If optional under state legal requirements, insurance must cover all employees regardless.

(b) **Commercial General Liability Insurance** with minimum limits of **$1,000,000 combined single limit per occurrence and $2,000,000 in the aggregate**, including, but not limited to, coverage for bodily injury liability, property damage liability, and personal/advertising injury liability.

(c) **Automobile Liability Insurance** with minimum limits of **$1,000,000 combined single limit per accident/occurrence** for bodily injury liability and property damage liability, including, but not limited to, coverage for all owned, hired and non-owned vehicles or automotive equipment used by or for the Contractors and including coverage for contractual liability for those liabilities assumed by the Contractors.

All policies of insurance shall add PPG as additional insured.

Subject: Plaquemines LNG Update sent on behalf of Michael Sabel and Robert Pender

Date: Fri, 4 Oct 2024 17:58:09 +0000

President Hinkley, Sheriff Turlich, Superintendent Ritz and Plaquemines Parish Council Members:

We write to provide you with an update regarding the significant progress we have made in the construction and commissioning of Plaquemines LNG, as well as recent community investment and initiatives.

But first we want to express our deep appreciation to President Hinkley, Sheriff Turlich, Superintendent Ritz and each of the Parish Council members, and your respective staff for your strong and consistent support of Venture Global and Plaquemines LNG. Our longstanding partnership with you has made our project's success to-date possible and it will remain vital moving forward. Thank you.

PLNG Status Update

Phase One construction of Plaquemines LNG is well advanced and we are nearing first LNG production later this year. We recently concluded a successful "cooldown" process where we conveyed LNG from a carrier moored at our docks into the first phase of the facility. This process will facilitate a faster start to our commissioning process, and we remain on track to begin producing first LNG in 2024 even as we continue commissioning and construction of the Project. Our construction workforce reached its peak level during this past Summer and we are now heavily engaged in the early commissioning of the first phase of the facility. We appreciate the Parish's collaboration with us and we are excited about these milestones and hope that you are, too.

Parish Revenue and Economic Impact

We are also gratified to be able to meaningfully contribute to the economic prosperity of Plaquemines Parish. Through August 2024, Plaquemines LNG and its contractors have paid a total of $260 million in sales taxes directly to Plaquemines Parish taxing entities. We currently estimate that we and our contractors will pay approximately $70 million in additional sales taxes through the end of 2024, with more sales taxes to be paid to the Parish in 2025. These figures, although significant, do not include the increased sales tax payments made to the Parish due to the higher general economic activity in the Parish associated with the construction of Plaquemines LNG.

We understand that the Parish Government and the Parish School System have been able to increase pay and benefits for their staff multiple times as a direct result of those increased revenues from Plaquemines LNG, which is well-deserved by the Parish Government's dedicated workforce and the employees of its strong-performing educational system. We couldn't be more proud of the immediate and substantial financial impact that Plaquemines LNG is having throughout the Parish, and we thank you for your partnership and support to make it happen.

We have been delighted with, and benefitted from, the participation by many talented Louisiana businesses in Plaquemines LNG's construction. To-date, Plaquemines LNG has purchased more than $2 billion of equipment, goods and services from Louisiana businesses; and we remain focused on maximizing opportunities for businesses from Plaquemines and the surrounding parishes to be involved in supporting both the construction and long-term operations of the Project.

In addition, we are proud to be materially supporting the growth and development of the Plaquemines Port Harbor & Terminal District. Our contractual payments to the Port since 2016 exceed $64 million, and we will continue to make significant annual contractual payments to the Port for decades.

PLNG Careers

To date, Plaquemines LNG has hired nearly 500 operators and other permanent, full-time staff, with operators earning an average annual total compensation exceeding $100,000. More than 25% of these new, permanent hires are from Plaquemines Parish; approximately 75% are from Plaquemines, Jefferson, Orleans or St. Bernard Parishes; and more than 90% were Louisiana residents before their hire by Plaquemines LNG.

Will-to-Skill Program

Venture Global's Will-to-Skill Program, launched in 2020, has provided free technical training to 159 Plaquemines Parish residents seeking better economic opportunities in various skilled trades. The free-of-charge program has changed many lives and families for the better by equipping Parish residents with the skills needed to secure high-paying, reliable, and family-supporting jobs. We have invested more than $500,000 to complete 14 cohorts in the Parish so far, and have two additional courses planned for the balance of 2024, with more to come in 2025.

Community Initiatives

Through a Cooperative Endeavor Agreement with the Parish, Venture Global is funding the rehabilitation of the Pointe Celeste Pump station, totaling approximately $1.5 million. Completion of the rehabilitation is targeted before year-end. We have also been engaged with the Parish regarding our potential provision and funding of reverse-osmosis equipment to support the Port Sulphur water treatment plant restoration and upgrade.

On top of the aforementioned contributions and support for the Plaquemines Parish community, in 2024 alone we have provided more than $500,000 in financial support across 80 different charitable, festival, recreational, and educational events and initiatives in Plaquemines Parish.

These efforts are consistent with Venture Global's long-standing commitment to giving back to the communities in which we operate and helping to enhance the quality of life in the Parish. Our team is always open to exploring new ways to help the community and partnering with the Council and other community leaders when needed. We look forward to continue growing our partnership with the Parish for decades to come.

All the best,

Hi Kyle:

As promised, our project team has pulled together some background notes responding to each of your questions/points below. Mike is happy to speak with you and/or the Governor on this as well if needed, we just wanted to provide the full background on the front end.

Thanks!
Shaylyn

General

- IFI is a solid company that supplies industrial fabrics (geo-grid) to the industry. **We at VG have used their products for other work, including some of our marine offloading facility refurbishment.**
- IFI supplied to this project ~48,000 LF of silt fence.
- Venture Global did a competitive bid for the geo-grid for the project. IFI was not the selected bidder. The parent company that won the bid has 100's of employees in Louisiana and the distributor that they use also has 100's of employees in Louisiana (their gid is manufactured in Georgia). IFI's grid is manufactured in Texas.

The Governor asked me to email and ask you to look into Louisiana's Industrial Fabrics presentation to the Shaw Yard and their subsurface grid materials to Venture Global's Engineer (Worley Engineering) and their contractor (Odin Construction). It is our understanding both deemed it superior and more cost effective and ordered from Industrial Fabrics.

- Neither Worley Engineering nor Odin deemed any product to be superior or more cost effective.
- Worley did not do the engineering for the Shaw Yard.
- The material (geo-grid) for the Shaw Yard was not ordered from IFI by Odin. This was confirmed on 8/6/2024.
- Odin has a long relationship with IFI (and others) and had originally asked IFI for a quotation for geo-grid for the Shaw Yard during initial project design.
- Work at the Shaw Yard (approximately 20 acres) used IFI geo-grid. This was because we had some on hand, and Odin (as I recall) had access to some additional IFI grid. This allowed us to get started.
- Our pricing review confirmed that for the CP2 site, as well as the Shaw Yard, that the IFI geo grid is not more cost effective. The overall cost/value is based upon detailed review of the actual soil conditions, the performance of the geo-grid utilized, and the amount of stone required over the grid. As the stone is by far the largest cost, higher performance grid can save substantial cost.
- As we progress the installation in all areas, regardless of the type of grid or the supplier, we continue to do testing to validate we are installing the best product that meets the design requirements at the lowest overall cost.
- We don't share cost/bid data with or between suppliers.

After the project director for Venture Global found out, we understand he overrode them and purchased from a Georgia Company that cost twice as much and it is not as strong. 40% of the yard failed due to the lack of strength.

- Not correct understanding.
- There was no purchase from IFI.
- The 'Georgia' company competed with IFI on the supply was found to be a better overall value. All products from the 'Georgia' company are purchased via a Louisiana distributor that employs 100's of people in Louisiana.
- I visited the IFI manufacturing facility in Texas and met with their senior leadership and owner. We reviewed their information provided in their quotations and discussed other products and opportunities that we may have for this project and in the future.
- There are areas at the Shaw Yard that were found to have (unexpected) sub-surface water. We are installing other controls to cut off the sub-surface water and resolve the issue. The grid has not failed. And it isn't accurate to say that '40% of the yard failed' as ~70% of the Yard hasn't been finished.

Industrial Fabric then met with Odin to propose their product to fix the issue and we have been told that the VG project director refused again opting for the Georgia company to fix the problem they created with a much high cost.

- Not accurate.
- Odin is the installer. They have no final design role. Not sure what conversations were had between IFI and Oden, but neither would have the sub-surface data that we are currently using.
- There is no geo-grid fix (from IFI or the 'Georgia' company) being utilized. As noted earlier, we are resolving the sub-surface water issue by separate means.

Additionally, for the HDD Road the Industrial Fabric's grid was approved and selected by the contractor and engineer. They ordered 1400 rolls of the grid but after 300 rolls were delivered, the order was cancelled.

- Also, this is not accurate. The design of this area significantly changed a short time ago based upon the fill material and the actual soil conditions.
- None of the original intended grid was usable for this area. The 300 rolls that were delivered from IFI, although not suitable for this area, are being using in other locations.

Subject: [EXTERNAL]: Subsurface grid materials

Mike,

Hope all is well. Congratulations on CP2 and the recent approval to increase capacity and more energy trade!

The Governor asked me to email and ask you to look into Louisiana's Industrial Fabrics presentation to the Shaw Yard and their subsurface grid materials to Venture Global's Engineer (Worley Engineering) and their contractor (Odin Construction). It is our understanding both deemed it superior and more cost effective and ordered from Industrial Fabrics.

After the project director for Venture Global found out, we understand he overrode them and purchased from a Georgia Company that cost twice as much and it is not as strong. 40% of the yard failed due to the lack of strength.

Industrial Fabric then met with Odin to propose their product to fix the issue and we have been told that the VG project director refused again opting for the Georgia company to fix the problem they created with a much high cost.

Additionally, for the HDD Road the Industrial Fabric's grid was approved and selected by the contractor and engineer. They ordered 1400 rolls of the grid but after 300 rolls were delivered, the order was cancelled.

The Governor would like you to look into how the Louisiana company can be incorporated. On a related note, they are doing work on the Meta facility in north Louisiana and have already saved the company roughly 10 million.

Thank you, Kyle

Kyle Ruckert

Subject: Utilization of IFI - long term relationship

Shaylyn,

I wanted to make sure you aware of the long-term relationship and continued work we have with Industrial Fabrics. Some specifics:

- IFI was awarded the supply of the geo-grid fabric for 9 of our 10 marine offloading facilities (MOFs). These MOFs are critical to the project, and it was imperative that they were properly prepared prior to receipt of the CP2 project materials. These MOFs total approximately 45 acres and due to other soil conditions and preparation requirements, required approximately 35 acres (169,500 square yards) of geo-grid. This work has now been accomplished.
- IFI hosted both me and or SVP of Supply Chain at their TX manufacturing facility on March 11, 2025. I had the opportunity to thank them for their previous support and services, explain to them how the bidders for the geo-grid fabric on the CP2 project site was evaluated, and to talk about additional work and supply that was still open that we wanted them to bid on. I brought our supply chain leader to the meeting to help ensure IFI got every opportunity possible as we move forward.

- After the March 11, 2025, meeting, IFI has bid/been awarded ~48,000 LF of silt fence and posts at the CP2 project site and the geo-grid require for the natural gas compressor station on the pipeline project (110,000 square feet of material).

Also, I call the state of Louisiana home. It is important to me that we utilize home state supplies in every situation possible, assuming they are competitive and responsive. Obviously, IFI meets this criteria. The company that was selected to supply the geo-grid for the CP2 project site also meets this criteria. Specifically, they have over 140 employees that also call Louisiana home and their records showed in 2024 over $44M contribution to Louisiana ($9.5M wages/benefits, $27M spend on Louisiana contractors and suppliers and $7.5M in taxes).

I look forward to giving IFI additional opportunities as we continue to progress our work. In fact, I have a lunch meeting with Cary Goss next Tuesday to discuss.

Jim

Hi Kyle- As discussed, below is the proposal we sent to the White House for the October 3rd event (of course, the date can change subject to POTUS or VPOTUS availability) please let us know once you have confirmed this works for the Governor. We are hoping to confirm this date by the end of the week.

Thanks!

Subject: Scheduling Proposal for President Trump

Hi Meghan,

I hope you are doing well! Below please find a scheduling proposal for a ceremonial groundbreaking rally for President Trump at Venture Global's CP2 LNG project which was approved by the President earlier this year. This $28 billion project is the first major LNG facility to break ground during this term and sits adjacent to Calcasieu Pass, an operating LNG facility which President Trump approved during his first term. **This project will have an enormous impact on the balance of trade with the EU, Japan and others, totaling up to $200 billion.** Domestically, the project will support tens of thousands of jobs across over 30 states and have hundreds of millions of dollars in economic impact in Louisiana through tax revenue, etc.

Notably, CP2 was the project that launched the Biden LNG pause (with the support of Jane Fonda and others) so this groundbreaking would be a good symbol of President Trump taking further action to reverse course on the Biden energy policies. We have already socialized this event with Secretary Burgum's team as well as directly with Speaker Johnson and Leader Scalise. Our CEO also saw Susie Wiles at the Speaker's event in Wyoming last week and flagged for her this proposal was coming.

The Secretary's team (cc'ed), Speaker and Leader were all very enthusiastic about this and recommended a target of October 3rd for when Congress is out of session but of course I'm sure everyone will make whatever date work if President Trump is able to attend. Please feel free to reach out with any questions! Happy to do a call if easier.

Best,
Shaylyn

SCHEDULING PROPOSAL: PRESIDENT TRUMP LNG SITE TOUR AND GROUNDBREAKING RALLY

VENTURE GLOBAL CP2 LNG – CAMERON PARISH, LOUISIANA

PURPOSE: To have President Donald J. Trump, Secretary of the Interior Doug Burgum, Secretary of Energy Chris Wright and other officials visit Venture Global's CP2 LNG export facility in Cameron Parish, Louisiana. The President and delegation would tour the project President Trump approved during the first Trump term (Calcasieu Pass) and break ground on the second facility he approved (CP2) when he lifted Biden's 'LNG pause' and hold a rally on unleashing American energy, strengthening global energy security, and balancing trade with US LNG exports to thousands of hard-hat workers.

BACKGROUND

- CP2 was the "Keystone pipeline" of Joe Biden's LNG pause, with a left-wing, activist and celebrity-led (Jane Fonda and others) Tik Tok campaign targeting the CP2 project and pushing the Biden administration to halt new LNG projects.
- On President Trump's first day in office, he lifted the LNG pause. On March 19, 2025, DOE issued a non-FTA export authorization for CP2. On May 23, 2025, FERC re-authorized its Order for CP2 to begin construction. On June 3, 2025, Venture Global began site work on the CP2 facility. On July 28, 2025, Venture Global announced a final investment decision and successfully closed $15.1 billion in project financing for CP2.
- CP2 is now under construction and is expected to bring first LNG online in 2027 – the only LNG project approved during President Trump's second term that will come online in this term.
- Just Phase One of CP2 will contribute more than $45 billion to the balance of trade with European nations (through Italian and German customers). It will also contribute approximately $30 billion to the balance of trade with Japan through long-term contracts with Japanese customers. **Phases One and Two of CP2 in total are expected to contribute $100-$200 billion of value to U.S. balance of trade.**
- Venture Global is investing well over $50 billion in the state of Louisiana with its first 3 LNG projects, and will support 6,000 permanent, high-paying jobs in the state (direct and indirect.) CP2 alone is expected to support approx. 3,000 new, permanent jobs in Louisiana and approx. 7,500 direct construction jobs.
- Venture Global hosted Secretaries Burgum and Wright in March 2025 at their second project, Plaquemines LNG, south of New Orleans to host an $18 billion expansion of the project: https://www.foxnews.com/politics/us-energy-dominance-wright-burgum-visit-louisiana-liquefied-natural-gas-facility-amid-18b-expansion.
    - Video: https://x.com/Venture_Global/status/1898419940580835350, https://www.newsbreak.com/whiskey-riff-510620/3845195738637-louisiana-natural-gas-facility-goes-viral-for-blasting-creed-s-higher-after-expansion-announcement-america-is-so-back
    - Photos: https://x.com/LAGovJeffLandry/status/1897788011829469577, https://x.com/SecretaryWright/status/1897753241632624743, https://x.com/SecretaryBurgum/status/1898092620334723145, https://x.com/WillCainShow_/status/1897779312943591595

POTENTIAL PARTICIPANTS:

- POTUS
- Secretary Burgum, Secretary Wright, and other Cabinet leadership as determined by the White House
- Ambassadorial representation from receiving countries, could include Germany, Italy, Japan, Malaysia, and EU
- Governor Jeff Landry
- Louisiana Congressional Delegation
- Venture Global CEO, Executive Co-Chairman & Founder Mike Sabel
- Venture Global Executive Co-Chairman & Founder Bob Pender
