E0005	100014	Executed/Filed	Otter Tail Power Company	Done	2	2025-08-06 09:00:17		5/4/2028	Otter Tail Power Company	Otter Tail	MN	ERAS Study Cycle 1	NRIS	Hoot Lake 115 kV Substation	90.72	90.72	Battery Storage	Battery Storage	Not started		75	75.00	20-75	Otter Tail County, MN, LRZ 1	N/A	The 75 MW Hoot Lake Battery Energy Storage System is serving the identified need from our MN Integrated Resource Plan and meeting the 20-75 MW of Ordered battery procurement. The need identified in our Integrated Resource Plan is in Otter Tail County, Minnesota, LRZ1.
E0023	100105	Executed/Filed	Minnesota Municipal Power Agency	Done	3	2025-08-06 09:00:20		7/3/2028	Northern States Power Company	Rice	MN	ERAS Study Cycle 1	NRIS	Faribault Energy Park	393.60	393.60	Gas	Combined Cycle		7/3/2028	60.00	60.00	50-100	Rice County, MN, LRZ 1	N/A	Faribault Energy Park, located in Rice County, Minnesota is located in LRZ 1. Faribault Energy Park currently has a 300 MW interconnection agreement. We are planning to upgrade the gas turbine at the plant, which will result in increased output. This increased output will exceed the limits of the current interconnection agreement. We are requesting an additional 60 MW of interconnect capacity to allow for upgrading the gas turbine. The total interconnection would be 360 MW if this application is approved as requested. This additional transmission capacity would serve load within LRZ 1. The need is identified in MMPA's most recent integrated resource plan (Minnesota Public Utilities Commission Docket RP-25-302). This identifies a resource deficiency of 50-100 MW, which this project will serve.
E0011	100048	Executed/Filed	Minnesota Power	Done	4	2025-08-06 09:00:22		1/1/2027	Minnesota Power, Inc.	Itasca	MN	ERAS Study Cycle 1	NRIS	Boswell 230 kV	86.80	86.80	Solar	Photovoltaic	Not started		85.01	85.01	250-300	Itasca County, MN, LRZ 1	N/A	The Boswell Solar Project will be built near the Boswell Energy Center in Itasca County, Minnesota. The Boswell Solar project will address the resource adequacy need identified in Minnesota Power's approved Integrated Resource Plan filed with the Minnesota Public Utilities Commission in docket E015/RP-21-33. This solar project will be serving Minnesota Power's need of approximately 250-300 MW of solar resources to be located in MISO's Local Resource Zone 1. The Minnesota Public Utilities Commission held a Special Meeting on July 24, 2025 where it reviewed the resource adequacy need for various projects, including Boswell Solar, and subsequently issued the Relevant Retail Electric Regulatory Authority Verification Form confirming that Boswell Solar should be considered for the ERAS process in order to meet a resource adequacy and/or reliability need. The project has not requested a carveout through the Expedited Resource Acquisition Study process.
E0012	100070	Executed/Filed	Red Oak Ridge Energy Center LLC	Done	5	2025-08-06 09:00:22		12/1/2027	American Transmission Company	Kenosha	WI	ERAS Study Cycle 1	NRIS	Paris-Lakeview 345kV double circuit	1211.25	1211.25	Gas	Combustion Turbine (Simple Cycle)		12/1/2027	1186.00	1186.00	1750-2000	Kenosha County, WI, LRZ 2	N/A	Invenergy is proposing a new 1,186 MW gas fired electric generating facility to be located in Kenosha County, Wisconsin. The project will serve the needs of Wisconsin Electric's customers located in MISO's Local Resource Zone 2 ("LRZ 2") as described in the "Documentation of Need" of this application. The need identified is approximately 1,750-2,000 MW.
E0002	100013	Executed/Filed	MidAmerican Energy Company	Done	6	2025-08-06 09:00:23		9/1/2027	MidAmerican Energy	Adair	IA	ERAS Study Cycle 1	NRIS	Northboro-Orient 345kV	265.00	265.00	Gas	Combustion Turbine (Simple Cycle)	Not started		263.00	263.00	250-300	Adair County, IA, LRZ 3	N/A	MidAmerican Energy's Orient Energy Center project will be an up to 263 MW, natural gas fueled with fuel oil backup, simple cycle combustion turbine. The project is located in southern Adair County, Iowa and Local Resource Zone 3. Simple cycle natural gas-fired combustion turbines were identified as needed to meet MidAmerican customer's capacity needs through MidAmerican's Resource Evaluation Study that was completed in 2024 and filed with the Iowa Utilities Commission on November 1, 2024, in Docket M-0156. MidAmerican's capacity deficiency is at least the 250-300 MW level of the ERAS submittal.

The planned unit is a 200 MW dual fuel combustion turbine located in Madison County Indiana. IMPA's most recent Integrated Resource Plan identified a resource need of 250 MW. IMPA received a Certificate of Public Convenience and Necessity from the Indiana Utility Regulatory Commission recognizing IMPA's need for the unit to serve its load and authorizing construction of the unit on April 9, 2025.
E0039	100021	NextEra Energy Resources Development, LLC	Withdrawn	31	2025-08-06 09:00:55	11/26/2025	46808	MidAmerican Energy	Linn	IA	TBD	NRIS	Arnold 161kV Substation	675.5	675.5	Nuclear	Steam Turbine (including Nuclear, Geothermal, and Solar Steam)	Not started		646	646	600-700	Linn, IA, LRZ 3	N/A	The Interconnection Customer ("NextEra Energy Resources Development, LLC" or "NEE") has filed for a 646 MW generating facility sited in Linn County, Iowa. The Project is located in MISO Local Resource Zone 3 and intends to address resource adequacy needs for approximately 600-700 MW in the same Local Resource Zone as the generating facility, as described in the attached NERIS application letter.
E0024	100070	Executed/Filed	NextEra Energy Resources Development, LLC	Done	32	2025-08-06 09:00:55		2/25/2028	Entergy Louisiana	Tangipahoa	LA	ERAS Study Cycle 2	NRIS	Amite 115kV Substation	207.90	207.90	Battery Storage	Battery Storage	Not started		200	200	200-400	Tangipahoa, LA, LRZ 9	N/A	Amite Energy Storage II (under NextEra Energy Resources Development, LLC) is a 200 MW, 4-hour battery energy storage system in Tangipahoa Parish, LA. The project is located in MISO Zone 9 within the transmission and generation constrained Amite South load pocket, and will support DEMCO's and SLEMCO's resource capacity needs in MISO Zone 9 obligated by the Louisiana Public Service Commission's Minimum Capacity Obligation ("MCO"). The MCO requires SLEMCO and DEMCO to procure 90% of their MISO PRMR four years in advance of each Planning Reserve Auction, and this 200 MW storage project will directly serve that obligation, as DEMCO and SLEMCO each have a 100-200 MW need to fulfill.
E0027	100030	Executed/Filed	Red Butte Wind, LLC	Done	33	2025-08-06 09:00:56		2/25/2028	Minnesota Power, Inc.	Morton	ND	ERAS Study Cycle 2	NRIS	Nelson Lake 230kV Substation	456.84	456.84	Wind	Wind Turbine	Not started		426	426	1200-1300	Oliver and Morton County, ND LRZ 1	N/A	Red Butte Wind is an approximately 426 MW wind project in Morton and Oliver Counties, North Dakota. The project will be interconnecting in MISO Load Resource Zone 1. This location is consistent with the location of GRE's load growth as outlined in their Integrated Resource Plan ("IRP") filed in 2023. The IRP added more than 1 GW of wind by 2032 to enable GRE's Preferred Plan guided by GRE's load forecasts, capacity expansion modeling, and projected capacity position.
E0020	100027	Executed/Filed	Benton Solar II, LLC	Done	34	2025-08-06 09:00:57		2/25/2028	Great River Energy	Benton	MN	ERAS Study Cycle 2	NRIS	Benton County 115kV Substation	105.84	105.84	Solar	Photovoltaic	Not started		100	100	400-500	Benton, MN, LRZ1	N/A	Benton Solar II is a 100 MW solar project in Benton County, MN. The project is located in MISO Zone 1 and will meet the Zone 1 load needs outlined by Xcel Energy's 2024-2040 Upper Midwest Integrated Resource Plan ("2024 IRP"). The 2024 IRP identified the need for 400-500 MW of solar to support Xcel Energy's plans to retire all of their coal plants by 2030.

The project is in MISO Zone 6, will interconnect to Duke Energy Indiana's Petersburg to Gibson/Petersburg to Lost River 345 kV line, and serve a peak demand of up to 400 MW. The project will meet the load needs identified by Decentral Group for their 2028 projected hyperscaler data center load.

The energy center will serve long term resource adequacy of new large loads in LRZ8. This is 250 MW net simple cycle gas plant, interconnecting to Entergy's West Memphis to Keo 500 kV system.
	100551		Sycamore Land Holdings LLC	Under review	75	2026-07-08-18:31		5/30/2029	Duke Energy IN	Vermillion	IN	TBD	NRIS	08VERMM	508.5	508.8	Battery	Battery Storage	Not started		400	400	400-500	Vermillion County LRZ6	IPP	Sycamore Land Holdings, LLC proposes a 400 MW battery energy storage project (Sycamore BESS) in Vermilion County, Indiana to serve an incremental large load located in Clark County, Indiana.
	100560		Bluejacket Solar LLC	Under review	76	2026-07-29-12:38		6/1/2029	Hoosier Energy	Bureau	IL	TBD	NRIS	Bureau 138kV	266.36	266.36	Solar	Battery Storage	Not started		154.648	154.648	100-200	Bureau LRZ 6	N/A	This is a Solar plant with a net Maximum Facility Output (MFO) at POI of 260 MW utilizes 70 Sungrow inverters. The Gross combined capacity of the facility is 266.3616 MW. Feeders collect the power from inverters via inverter step-up transformers. The power is collected at a 34.5 kV level, where it is stepped up to 138 kV by two 138/34.5/13.8 kV main power transformers. The transformers connect via an overhead gen-tie line. MFO at POI will be maintained at the requested level of service using a facility-level SCADA (plant controller).
	100475		Atlas Storage LLC	Under review	77	2026-8-10-15:57		10/1/2027	NIPSCO	La Porte	IN	TBD	NRIS	BABCOCK-STILLWELL 345kV	600	600	Storage	Battery Storage	Not started		201.34	201.34	200-300	La Porte LRZ 6	N/A	Project Atlas will address a resource adequacy deficiency supported by the attached documentation. Specifically, NIPSCO's 2024 IRP identifies that, taking into account significant new load (that was only identified as early as 2024), NIPSCO's total peak load is projected to grow from 2,900 MW in 2023 to 5,100 MW in 2033 under its base case, and to as much as 11,100 MW by 2035 (see IRP, Figure 3-42, page 81). This is due to the addition of up to 8,000 MW of new load predominantly from hyperscaler data centers. Given NIPSCO's current resource supply, additional generation is urgently needed to be able to timely and reliably serve this new load (see IRP, pages 16-17).

In advance of the start of each ERAS study period, MISO will post the projects that will be studied within that cycle based on updated common constraint analysis and any potential withdrawals.

MISO has received over 50 LSE ERAS applications and has reached the cap of allowed LSE projects submitted to ERAS.

Any new LSE project submissions will be added to the waitlist in the order received. An LSE project on the waitlist will be reviewed based on its ERAS queue position if an LSE within the 50 LSE project cap withdraws.

MISO has received over 10 IPP ERAS applications and has reached the cap of allowed IPP projects. Any new IPP projects submitted to ERAS will be added to a waitlist in the order received. There is currently a waitlist of 3 additional IPP project that were submitted to ERAS.

Request Status column refers to the current study status of the project (example: Done means the final SIS has been posted).
GIA Status column refers to the Current GIA Executed Status.
Post GIA Status column refers to the construction status of the project after the GIA has been executed.
