Hi Sarah,

Just following up to see if the Governor's schedule could work out for a meeting next week on Wednesday, Thursday or Friday (March 13-15). Thanks again for your consideration of the request.

Tanner
[redacted] cell

On Feb 26, 2024, at 8:26 AM, Tanner A. Johnson <tajohnson@vnf.com> wrote:

Sarah and Kyle,

Paul Rainwater and I have clients that are working in collaboration with **Gray Stream's carbon capture company (Gulf Coast Sequestration or GCS)** on a major energy project in SW Louisiana. We wanted to introduce our respective clients, **Heirloom and Climeworks**, and request a meeting with Governor Landry on **Thursday, March 14, or the morning of Friday, March 15**. The project, called Project Cypress – is a $**1B energy project with carbon capture that will be sited in Calcasieu Parish**. In addition, we have invited Gray to join the meeting if his schedule permits.

Late last year, we had very productive meetings with the Louisiana Legislators from Southwest Louisiana and others in the industrial sector. There is tremendous support for the project which is projected to generate over 2,000 total jobs and catalyze economic growth and workforce development for Louisiana. In the coming weeks and months, the initial phases of the project and the formal commitment of $600M from the U.S. Department of Energy will be announced – and we wanted to make sure that the Governor and his senior team had ample opportunity to meet these folks, ask questions and offer suggestions about how to make this project successful for Louisiana.

Project Cypress is centered around the work of these two companies. Climeworks and Heirloom are the global leaders in the development of Direct Air Capture, an emerging technology that removes excess CO2 from the atmosphere and stores it safely and permanently underground. Gray Stream and his company GCS are integral to this project, as are other project partners like Battelle and DOE.

Attendees at the meeting would be:
Gray Stream, Gulf Coast Sequestration
Daniel Nathan, Climeworks Chief Project Development Officer (resides in Denmark)
Vikrum Aiyer, Heirloom
Former U.S. Senator Mary Landrieu, Consultant to Climeworks
Paul Rainwater, Consultant to Heirloom
Tanner Johnson, Consultant to Climeworks

Ryan Furby, Consultant to Gulf Coast Sequestration
Please let us know if this time frame can work, as Mr. Nathan is traveling from Europe and will need to adjust his travel schedule to accommodate the Governor's availability.

Thanks,
Tanner Johnson and Paul Rainwater

Motion by Roland Hollins, second by Chad Sanders

Allen Parish Police Jury
Request for Information and Time for Evaluation
May 6, 2024

Resolution No. 6619

At a regular meeting of the Allen Parish Police Jury, held on Monday, May 6th, 2024, at which meeting a quorum was present, due notice of same having been made according to law, the following Resolution was made:

WHEREAS, the Federal Government has deemed Carbon Dioxide a material hazardous to the environment and has passed Tax Credit legislation for the Sequestration of said material;

WHEREAS, the Allen Parish Police Jury has been notified of several potential industrial scale Carbon Dioxide Pipeline, Class 6 Injection Wells, and Sequestration projects in Allen Parish to capitalize on the Federal Tax Credit; and

WHEREAS, the State of Louisiana, through its Department of Energy and Natural Resources has been granted primacy, and thus final permitting authority in Louisiana, over the Class 6 Well Permitting process from EPA; and

WHEREAS, the Allen Parish Police Jury has been made aware that these projects may pose future risks to the people and natural resources of the Parish, including, but not limited to, precious ground water used as public drinking water supply and crop irrigation supply, where currently, these risks do not exist;

WHEREAS, the Allen Parish Police Jury has yet to be made aware of any local benefits to these projects being sited in Allen Parish;

WHEREAS, Allen Parish Police Jury wishes to be allowed time to evaluate the potential risks of the proposed projects to the people of the Parish and its natural resources, and compare those risks to the potential benefits and, FURTHER, engage the Citizens of Allen Parish during this risk/benefit evaluation process, before providing official input and support for the projects;

NOW THEREFORE BE IT RESOLVED, that the Allen Parish Police Jury does hereby officially notify and request to the Governor of Louisiana, Jeff Landry, LDENR Secretary, Tyler Gray, Senator Heather Cloud, and Representative Dewith Carrier to allow the Allen Parish Police Jury, PRIOR to the final issuance of any Class 6 Injection Permits in Allen Parish, be allowed;

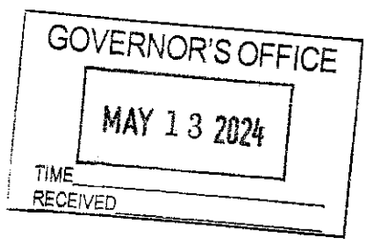

1. time to undertake a formal evaluation process to quantify potential local risks/benefits,
2. time for the citizens of Allen Parish to made aware of the project and formerly presented the potential local risks/benefits,
3. and to provide these findings in the form of official input during the Class 6 permit acquisition process.

This Resolution being submitted to a vote, the vote thereon was as follows:

YEAS: 6

NAYS: 0

ABSENT AND NOT VOTING: 2

And the Resolution was declared adopted on this, the 6th day of May, 2024.

ATTEST:

Colleen Sonnier

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Dear Sarah,
My client Woodside Energy's CEO Mrs. Megan O'Neil is coming to LA from Sept. 23-25th and considering our recent acquisition of both Tellurian and Driftwood LNG facilities here (see below link to press release) we would like to respectfully request an audience with Gov. Landry. The goal would be to discuss this acquisition and our plans going forward in Louisiana and partnership with the State. This is a huge investment of over 1 billion dollars for Woodside and certainly would appreciate the chance to discuss this with Gov. Landry if possible.

Thank you for considering this request,
Chris

So am I correct in thinking that this was a business deal bet/ private firms? And I believe the person sending the email may have been an investor in Telluride. But she presents this as if the Feds swooped in and sold off American LNG. I'm sure all of this started under JBE (correct me if I'm wrong) but regardless, I'm not sure why she thinks the State of Louisiana could have halted it.

Patrick has the right of it- this is a private business matter. We also don't believe in limiting LNG exports to limit free trade of energy commodities, as the writer would ask us to do. Plus they seem to be from Los Angeles anyway

Subject: RE: Tellurian Inc.'s purchase by the Woodside, an Australian company that is Drilling on America's soil for their own benefit & control of American LNG, and international LNG and ultimately leaving the US out completely

Quick and dirty version
Tellurian is an LNG company founded by the same guy who originally built up Cheniere (the company that runs Sabine Pass LNG in Cameron, making more LNG shipments weekly than any other facility in the U.S.), but got tossed out in some power play in the mid-2010s. They were trying to build up on the same model again with the proposed Driftwood LNG export facility in Calcasieu Parish. They got all the FERC permits and even the now-rare DOE authorization to ship to non-free trade agreement nations (those authorizations are currently the subject of the Biden Administration "pause" that everyone calls a complete ban, though it's not really that it's just a BIG impediment to investors if the customer base is artificially restricted like that).

After natural gas price issues and the whole pandemic chaos, Tellurian was having a hard time pulling the money together to actually get Driftwood LNG built, asking for a three-year extension from FERC earlier this year to

start construction (which they received). In Spring/Summer of this year, they sold off some Haynesville Shale assets to Aethon with the catch that Aethon had to promise to a deal to supply Driftwood LNG if and when it gets built. The idea was to bolster both Driftwood's prospects of getting investment and to streamline Tellurian a bit to make both the company and the project more attractive to investors.

The plan could be said to have worked, as Australian LNG company Woodside bought both Tellurian AND Driftwood LNG in July for about $1.3 billion. The general sense is that Tellurian shareholders didn't love the deal, but there wasn't a better offer out there (maybe not ANY other offer out there) and Driftwood was not likely to get built otherwise. And Woodside is rumored to have a lot of buyers looking to purchase a stake in Driftwood now to actually construct it (with the FERC extension, they have until Spring of 2029 to get it built).

Not sure what the writer is wanting done about any of it. The LNG that facility would handle was always intended for export, and issues of mergers/acquisitions/shareholder rights are not generally within the authority of a state government. Maybe the FTC might have an angle or the State Department, since it's international, but I'm a bit out of my depth on that part of it.

Tellurian Inc.'s purchase by the Woodside, an Australian company that is Drilling on America's soil for their own benefit & control of American LNG, and international LNG and ultimately leaving the US out completely

This is awful: the Tellurian/Woodside deal. A US LNG sale deal to an AU co who'll take our LNG from US soil for AU and distribute globally for profit while kicking US shareholders in the teeth by going private and offering $1 cash per share as part of the deal. The US govt in conjunction with the US banking industry (IMO working in the banking ind for over a decade), intentionally depressed the energy sector limiting their appetite to basically nil on lending to oil and gas cos because of the green energy BS. This is what's wrong with our country. The US co could not get funding to complete the project. The AU co (who'll probably make FID within the 1st qtr of 2025 using international financing or maybe worse US banking financing) swoops in buying a potential 30 billion co for 2 billion outing shareholders of years of holding ultimately leaving the US out completely on its own LNG. Drill baby drill doesn't pertain to other countries on our soil for their own benefit.

Please feel free to contact me if you have any questions.

Regards,
Asefeh Shirafkan

Kyle,

I'm excited to share with you the news that Woodside has completed the acquisition of Tellurian and its Driftwood LNG development opportunity. The acquisition represents a new chapter for the company and reinforces Woodside's position as a leading independent LNG company.

The Driftwood LNG opportunity, which remains advantaged as one of the only fully-permitted, pre-FID opportunities in US LNG, has been renamed Woodside Louisiana LNG, as it becomes part of the Woodside portfolio.

Located in Calcasieu Parish, near Lake Charles, Louisiana, Woodside Louisiana LNG is a high-quality, scalable development opportunity, with a total permitted capacity of 27.6 million tonnes per annum. Site construction has already commenced.

Since announcing the acquisition in July, we have been warmly welcomed into the Lake Charles community and we are eager to continue building strong relationships with the community and broader state.

This is an exciting milestone for Woodside, and I look forward to sharing updates as we target FID readiness from the first quarter of 2025.

If you have any questions, please let me know.

Thanks,

Jon

Andrew,

Just a few logistics, the restaurant has a screen, podium, microphone, and projector. You will need a laptop and HDMI cable.

If you can send a .pdf of the PowerPoint presentation the board would simply like to review it.

I'll get there by 5:00 PM you can look for me in the bar, then we can get you in the banquet room they always setup for these events.

Have a great weekend.

Best, Thell

Protecting Louisiana's Oil & Gas, & Petrochemical Infrastructure

STEPHEN SWIBER – CHIEF RESILIENCE OFFICER

ANDREW KILSHAW – POLICY ADVISOR

Louisiana Energy Facts

- **Natural Gas**
  a. Louisiana is 3rd in natural gas production, drilling 10% of the nation's marketed gas
  b. We produce over 4,000 billion cubic feet (bcf) every year
  c. Our gas and our neighbors' gas can get to market because of over 70,000 miles of distribution and gathering lines running through the state
  d. Louisiana's place in the natural gas energy is why gas in the U.S. is priced at Henry Hub in Erath, LA
- **LNG**
  a. 3 LNG plants online (Venture Global in Calcasieu Pass, Sempra in Cameron, Cheniere in Sabine Pass) capable of exporting 8 billion CFD of gas
  b. 3 more under construction for another 8 billion CFD (Venture Global Plaquemines, Driftwood LNG in Calcasieu, additions to existing plants)
  c. Finally, over 10 billion CFD approved by FERC and in permit filing right now
  d. Overall, the LNG industry will eventually represent over $100 billion in investment in our state
  e. We run an LNG Center of Excellence through McNeese State University, and our technical colleges tailor workforce training to the needs of the industry
  f. Combined, we're the leader in LNG exports with 61% of the nation's total

Louisiana Energy Facts Cont.

- **Oil**
  a. We've been drilling for oil in Louisiana since the first well in Evangeline, LA in 1901.
  b. We hold the only deepwater export port in the nation, the LOOP.
  c. We produce over 31 million barrels of oil a year in the state, and that doesn't count our share of the 622 million barrels produced in the federal Gulf of Mexico. The Gulf of Mexico oil industry runs largely through our ports, particularly Port Fourchon.
  d. Louisiana's 15 crude oil refineries account for about one-sixth of the nation's refining capacity and can process nearly 3 million barrels of crude oil per day.
- **Electricity**
  a. LA's energy resources make it one of the top states most years for electricity affordability . Despite being the 25th largest state in population, we're 13th in electricity generation.
  b. 28,000 megawatts in total capacity, producing over 100 million megawatt hours (mwh per year).
  c. Almost 80% of our homegrown generation capacity comes from natural gas, with another 9% coming from our two nuclear plants. Purchases of neighbors' coal and nuclear make those industries a major part of our consumption, over 30% combined.

Streamlining Permitting Processes

- **Streamlining Permitting Processes in Oil and Gas Industry (EO JML 24-17)**
  a. Directed both DEQ and DENR to:
     i. Establish clear and concise guidelines to expedite the permitting processes, ensuring a timely and efficient approval mechanism.
     ii. Identify areas where agencies can enhance coordination and collaboration to eliminate duplication, reduce inefficiencies, and ensure a seamless permitting process.
     iii. Explore and implement innovative technologies and approaches to streamline permitting, and eliminate duplication between agencies while maintaining environmental standards.
     iv. Engage in public outreach to provide detailed information and customer-friendly guidance to applicants on the required documentation, procedures, and criteria needed at the beginning of the permitting process, and communicate changes in the permitting process.
     v. Develop and utilize performance metrics to accurately assess the permitting process.

Consolidation of Powers

- **Consolidation of Natural Resources and Energy Related Executive Branch Functions, Powers, Duties, and Responsibilities (EO JML 24-13)**
  a. Launched the Louisiana DRIVE Initiative and the Natural Resources Steering Commission
  b. NRSC recommends the Department of Energy and Natural Resources be placed under an Natural Resources Commission composed of five members:
     i. Commissioner focused on Statewide Infrastructure, Energy and Resiliency
     ii. Commissioner focused on The Department of Energy and Natural Resources
     iii. Commissioner focused on Energy and Resources Management
     iv. Commissioner focused on Finance, Economic Development and Planning
     v. Commissioner Focused on Coastal Activities
  c. Also, recommends an Upland Resources Management Authority (URMA), similar to a non-coastal CPRA.

Governor's Coalition for Energy Choice

- **Coalition of 10 Governors (LA,NH,MS,AL,GA,TN,IN,WY,AR,SD,OK,VA)**
  a. Help Americans tackle the high costs of energy and energy cost inflation.
  b. Help state leaders formulate smart energy policies that will benefit families, businesses, and communities.
  c. Goal is to ensure:
     i. Continued energy choice.
     ii. Minimize permitting and other regulatory barriers.
     iii. Limit expensive energy mandates.
     iv. Focus on affordability and reliability of energy infrastructure.
  d. Concerning efforts to dictate energy and fuel sources from the top.
     i. This is especially offensive amid high inflation.
     ii. We want to refocus energy policy on the consumer.
     iii. The people who have to go without other necessities when power and gasoline prices spike.

2024 Legislative Session Priorities

- Act 727: Streamlined the Louisiana Department of Energy and Natural Resources
  a. Created three new offices: Enforcement, Energy, Land and Water
  b. First step toward implementation of DRIVE Initiative Goals
  c. Created the Natural Resources Trust Authority, a new body which will reform the way we treat orphan well management

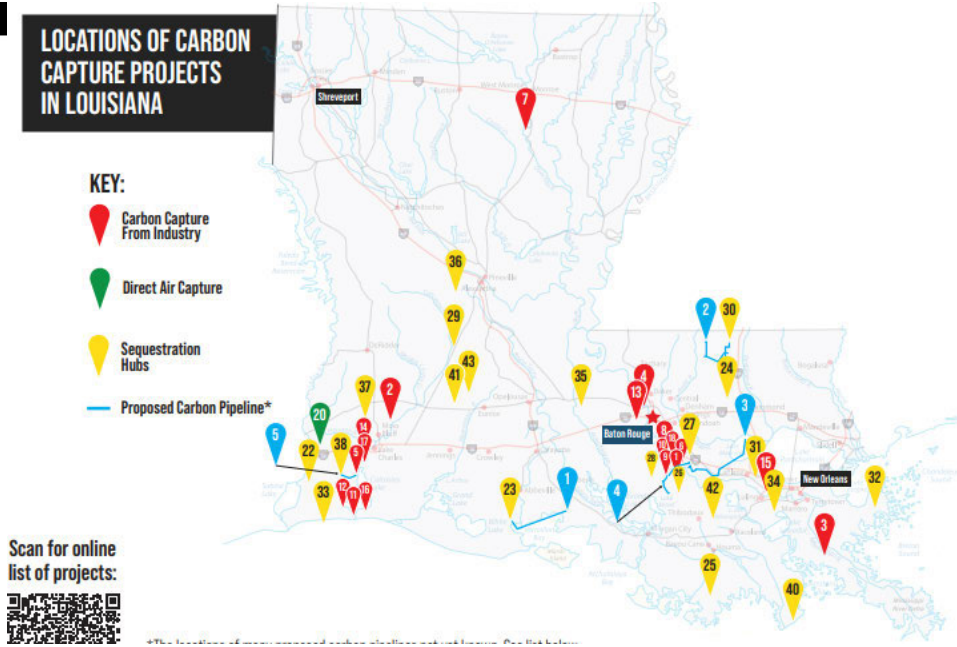

- HCR 18: Urged the Biden Administration to resume consideration of LNG applications.

- Act 251: Prohibits state governmental entities from restricting a private individual from buying or selling a vehicle that uses combustion engine.
  a. Stark contrasts to Biden's electric vehicle mandate.

Carbon Capture

Carbon Capture Needs Enough Pipelines to Circle Earth Four Times

The US goal to cut carbon dioxide hinges on transporting and burying more than a billion tons per year.

Carbon Capture Cont.

- Louisiana is one of the first states to be granted regulatory primacy over Class VI injection wells from the EPA.

- A slew of legislation from the 2024 session laid some of the ground rules on unitization, expropriation, liability, and revenue sharing.

- Louisiana is positioned to be a leader in carbon capture for the same reasons we're the leader in oil & gas: **Cajun ingenuity and private innovation**

Protecting Critical Infrastructure

- **Act 565 by Representative Zeringue, Signed by Governor Landry**

a. Added water control structures including floodgates or pump stations, wireline and wireless communications and data network facilities to critical infrastructure definition.

a. Added additional penalties for second offence unlawful entry including 6 months to 10 years in prison a fine of $500-$4000.

Critical Infrastructure Cybersecurity

- **Per Governor Landry's Executive Order, we are in an active state of emergency with regards to cybersecurity incidents**

  Section 1: Pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, et seq., a state of emergency is hereby declared to continue to exist statewide in the State of Louisiana as a result of the imminent threat to the citizens of the State. Section 2: The Director of the Governor's Office of Homeland Security and Emergency Preparedness (GOHSEP) is hereby authorized to continue to undertake any activity authorized by law that he deems appropriate in response to this declaration

- GOHSEP is currently hosting cybersecurity training for local law enforcement

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Andrew and Stephen,

I hope you are both doing well and have not been stressed with election over the last couple of weeks.

I wanted to see if you both had time sometime for Myself, Tim, and Curt to come by your office on this Thursday afternoon or Friday morning to talk more about upcoming pipeline projects in Louisiana. I have listed below projects that we are following in Louisiana. We want to discuss any insights you two may have on the projects and how we can work to push Louisiana based contractors to handle some of the work. Please let me know if both of you have any available time to meet. Look forward to hearing from you.

Pipeline Projects:
Venture Global – Delta LNG
Venture Global CP2 LNG
Air Products – Blue Darrow Project
Driftwood LNG Project (Woodside Energy has bought)
Driftwood Line 200 and 300 (Woodside Energy has bought)
Moss Lake Partners DeLA Exxpress Pipeline
TC Energy – Oak Grove Project

AN OVERVIEW OF
CARBON SEQUESTRATION

Carbon sequestration is a method for containing carbon dioxide (CO_2) in deep geologic formations. This process is the final step in carbon capture and storage (CCS), where CO_2 emissions from industrial processes are captured, compressed, transported, and injected into geologic formations such as deep saline aquifers or depleted oil and gas reservoirs for long-term containment.

KEY CHARACTERISTICS OF CO_2

CO_2 is a colorless, odorless gas produced naturally and through human activities, like fossil fuel combustion and organic decomposition. Though non-toxic and non-carcinogenic, CO_2 poses certain risks when concentrated in enclosed spaces due to its potential to displace oxygen, acting as an asphyxiant.

Underground, CO_2 can form carbonic acid when dissolved in water, leading to the corrosion of steel well casings and certain cement types. Such risks necessitate using specialized materials and well designs to ensure long-term containment.

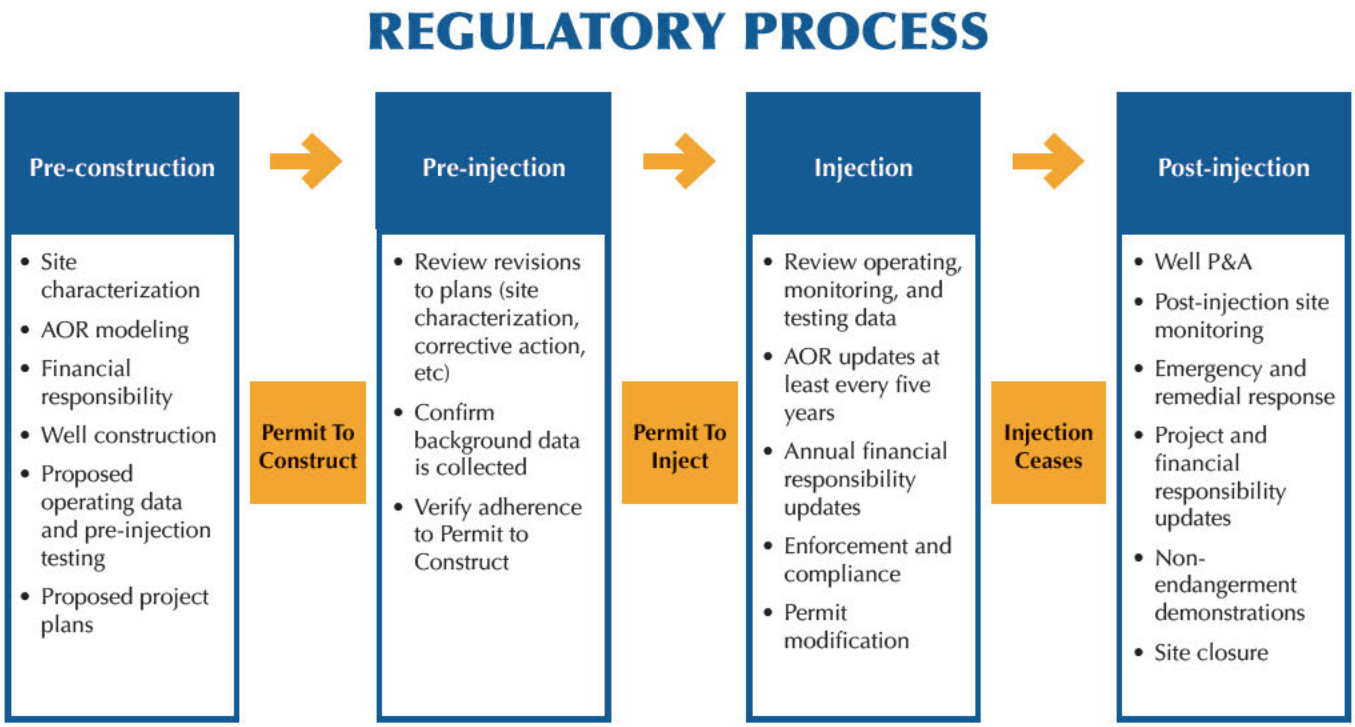

CLASS VI INJECTION WELLS: PURPOSE AND DESIGN

Class VI wells are specific to CO_2 sequestration and are designed to inject CO_2 deep underground for permanent storage. These wells are regulated under the Underground Injection Control (UIC) Program to ensure public health and environmental safety, with rigorous standards for siting, construction, operations, and monitoring. The Louisiana Department of Energy and Natural Resources (DENR) and the U.S. Environmental Protection Agency (EPA) share authority over these wells, with DENR overseeing compliance within Louisiana.

Design and Construction Requirements: Class VI wells must withstand high pressures and the potentially corrosive effects of CO_2, especially when dissolved in formation water. They include advanced casing and cementing standards designed to prevent CO_2 leakage and ensure mechanical integrity. Louisiana mandates that all engineering and geoscientific work be certified by licensed professionals.

REGULATORY AND PERMITTING FRAMEWORK

Permit Process: Class VI permitting is highly detailed and technical, requiring extensive site-specific data on geology, hydrology, and potential impacts. Applications must demonstrate that storage sites do not endanger underground sources of drinking water (USDWs) and must incorporate computational modeling to predict CO_2 plume behavior and pressure changes over time. In Louisiana, the permit process includes a review period that may span 18 months or more due to the iterative nature of revisions and additional technical submissions.

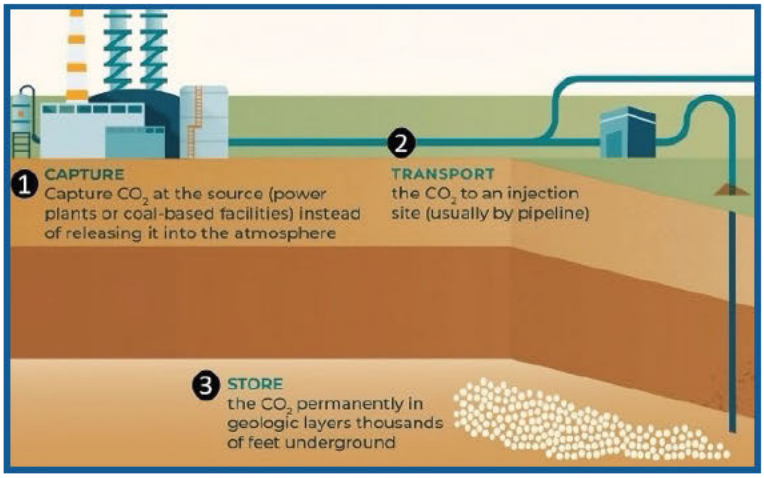

The technical characterization required for a Class VI injection well, both during permitting and throughout the lifespan of the project, is an iterative process by design.

Differences Between Federal and State Regulations: While Louisiana generally aligns with federal regulations, there are notable differences:

- Louisiana prohibits Class VI injection in solution-mined salt caverns.
- Permit transfers and modifications are more restrictive.
- Louisiana has more stringent mechanical integrity requirements, with injection immediately halted upon integrity loss until restored.
- Emergency permits are not allowed, nor are area-based permits for multiple wells.

MONITORING AND CONTAINMENT

CO_2 Plume Tracking and Monitoring: Monitoring is critical to verify that injected CO_2 remains contained within the designated geologic formation. This includes tracking the CO_2 plume's movement through computational models and installing monitoring wells within the injection zone and around USDWs. DENR mandates pressure and groundwater quality checks to ensure early detection of any migration or potential contamination.

Containment Mechanisms: CO_2 can be contained underground through:

- Structural Trapping:
  Low-permeability rocks like shale prevent upward CO_2 movement.
- Residual Trapping:
  CO_2 becomes immobilized in rock pores.
- Solution Trapping:
  CO_2 dissolves into formation water.
- Mineral Trapping:
  CO_2 reacts with formation minerals, converting to solid rock over time.

PUBLIC INVOLVEMENT AND SAFETY ASSURANCE

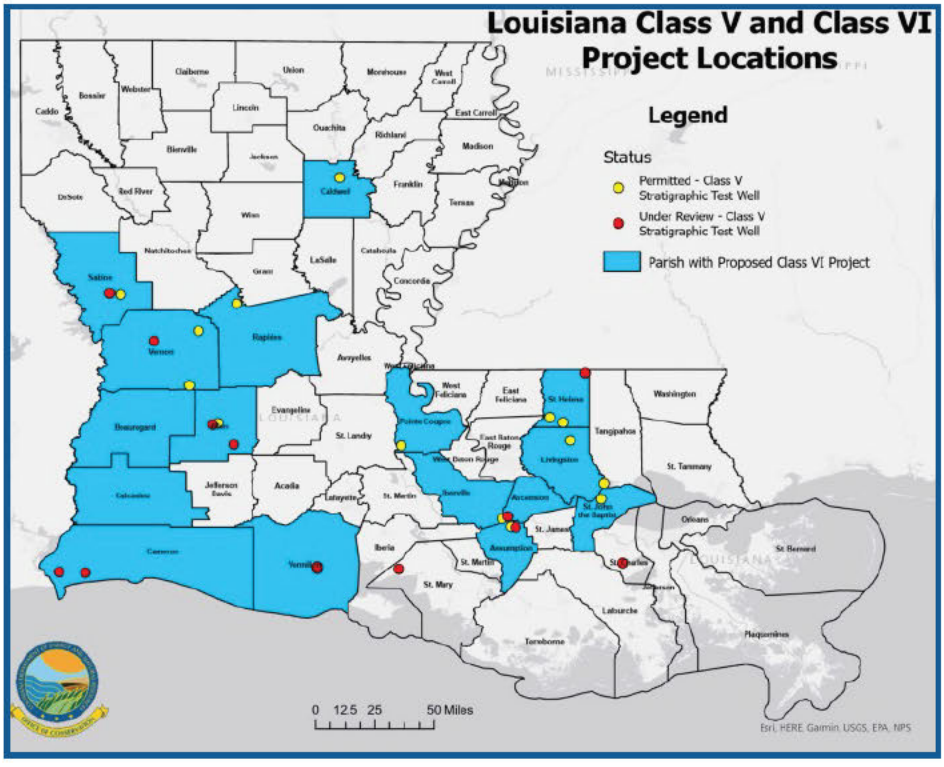

Public Input on Permit Applications: Before permit approval, Louisiana's DENR holds a public comment period and local hearings. Community concerns, particularly regarding water safety and land use, are incorporated into the permit review process. Additionally, public records, such as the CO_2 plume's area of review, are available for transparency and compliance monitoring.

Environmental and Health Safeguards: To protect drinking water, Class VI wells must have multiple containment barriers, including confining zones above the injection formation. Operators must locate and reinforce any nearby wells penetrating these zones to prevent leaks. Furthermore, DENR requires a 75% land acquisition threshold for unitizing pore space, a more stringent requirement than the 50% for oil and gas.

CURRENT STATUS AND FUTURE OUTLOOK

No Class VI wells have been permitted or operationalized in Louisiana. The EPA began reviewing Class VI applications before granting primacy to DENR in 2024. This regulatory experience builds on Louisiana's established history with CO_2 injection for enhanced oil recovery, providing a foundation of expertise for managing CCS projects.

Past and Present Case Studies: The Sleipner Project in Norway and the Archer Daniels Midland sequestration project in Illinois serve as international and domestic examples. While both projects faced challenges—such as CO_2 migration and corrosion—their operational insights inform Louisiana's regulatory framework, aiming for safer and more reliable sequestration outcomes.

ISSUED CLASS V PERMITS

Issued Class V Permits: In Louisiana, several Class V stratigraphic test wells associated with potential Class VI CO_2 sequestration projects have been issued permits, allowing operators to proceed with activities to characterize geologic formations. These issued permits mark these wells as compliant with regulatory standards, with operators authorized to conduct specific tests and data-gathering processes. Wells with issued Class V permits include:

- **Cleco Power, LLC** – CLDV-STW1 in Rapides Parish
- **DTM Louisiana Gathering, LLC** – Alt in Sabine Parish
- **River Parish Sequestration, LLC** – Evan Belle ASMP RPN-S #1 and Palo Alto RMN-S #1 in Assumption Parish
- **Air Products Blue Energy, LLC** – Maurepas N TST-DM #2 in Livingston Parish and Maurepas N TST-DM #1 in St. John The Baptist Parish
- **Shell US Gas and Power, LLC** – Soterra IT 2-1 and Soterra IF 1-1 in St. Helena Parish
- **Oxy Low Carbon Ventures, LLC** – YAMS MLR in Allen Parish and Pelican MLR in Livingston Parish
- **Capio Sequestration, LLC** – Sherburne in Pointe Coupee Parish
- **Whitetail Operators, LLC** – Louisiana Green Fuels in Caldwell Parish

These Class V permits are essential first steps in the development of potential CO_2 sequestration sites, as they allow operators to assess the geological suitability of formations for long-term carbon storage.

BACKGROUND ON CLASS V AND CLASS VI PERMITS

Class V Permits

- **Purpose:** Class V wells cover a broad category of injection wells used for a variety of purposes, including research, testing, and site characterization. In the context of CO_2 sequestration, Class V stratigraphic test wells are used to collect geological data essential for determining if a formation can safely contain CO_2.
- **Functionality:** These wells allow operators to gather information about the subsurface geology, including rock permeability, porosity, and the integrity of confining layers. While they don't inject CO_2 permanently, they may conduct preliminary injectivity tests using fluids that are non-hazardous and non-polluting.

- **Regulatory Pathway:** Class V permits do not imply a direct approval for CO_2 sequestration. For a site to be used for long-term storage, it must undergo a separate Class VI permitting process. However, data obtained from Class V wells often supports subsequent Class VI applications by demonstrating that the site meets strict geologic and safety criteria.

Class VI Permits

- **Purpose:** Specifically designed for the long-term geologic sequestration of CO_2, Class VI permits are the most rigorous of all injection well types. They are issued under the EPA's Underground Injection Control (UIC) program, with stringent requirements that reflect the complexities and risks of permanent CO_2 storage.
- **Functionality:** Class VI wells allow for the injection of supercritical CO_2 (compressed to a state between liquid and gas) deep into geologic formations, typically more than 1,000 meters below ground, where it can be permanently contained. These wells have advanced engineering and monitoring requirements to ensure that CO_2 remains securely stored.
- **Regulatory Requirements:** Louisiana's Department of Energy and Natural Resources (DENR), following primacy from the EPA, mandates a comprehensive application process for Class VI wells, requiring detailed geological modeling, risk assessments, and contingency plans to protect underground sources of drinking water (USDWs). Operators must provide extensive data, much of which is gathered through prior Class V testing, to prove that the formation is suitable for CO_2 storage.

WHY CLASS V TESTING IS IMPORTANT FOR CLASS VI PROJECTS

Class V wells serve as a foundational step in any CO_2 sequestration project. They provide essential information on geologic formations and help confirm that a site can safely contain injected CO_2 over the long term. Issued Class V permits in Louisiana demonstrate that operators are actively working to gather the necessary data to apply for Class VI permits, which would allow full-scale sequestration.

This two-stage approach ensures a cautious, data-driven pathway towards carbon storage, prioritizing public safety and environmental integrity. Louisiana's issued Class V permits represent progress in preparing for CO_2 sequestration, with the state's regulatory framework requiring detailed evaluation before operators can proceed to permanent injection under Class VI permits.

CONCLUSION

Permanent carbon sequestration has been done before, and it is grounded in proven techniques and operational experience. While large-scale sequestration projects are relatively new to the U.S., and particularly to Louisiana, the state's operators and regulators bring extensive experience in underground injection practices. For generations, Louisiana has managed underground injection operations and enforced modern regulations in partnership with the EPA since the 1980s. Specifically, Louisiana has developed expertise in handling CO_2 injections for enhanced oil recovery (EOR), where CO_2 is injected into depleted oil reservoirs to boost production. Although this CO_2 is not permanently stored—most of it returns with the oil—the experience has provided invaluable regulatory and operational insight into managing CO_2 pipelines, wellbores, and its underground behavior.

In addition, the Department of Energy and Natural Resources has decades of experience overseeing long- term storage of gases like methane in both salt caverns and natural formations, as well as the necessary pipeline transport systems. This background equips DENR with the technical and regulatory expertise essential for safe and effective carbon sequestration.

On a global scale, Norway's Sleipner Project has been successfully operating since 1996, storing CO_2 beneath the North Sea and offering comprehensive data on CO_2 behavior and geologic interactions. Lessons from Sleipner have informed industry best practices worldwide. In the U.S., the Archer Daniels Midland project in Illinois serves as a more recent example, providing critical insights into challenges such as corrosion and CO_2 migration. Louisiana's DENR is leveraging these experiences, incorporating best practices and addressing known challenges to optimize its approach to CO_2 sequestration and ensure robust oversight for local projects.

In summary, Class VI wells are a critical tool in reducing atmospheric CO_2 through permanent underground storage. Louisiana's DENR administers one of the nation's most stringent Class VI well programs, incorporating comprehensive regulatory standards to safeguard water resources, public health, and environmental integrity. By leveraging proven technologies, meticulous monitoring, and community engagement, Louisiana is positioned to play a leading role in carbon sequestration advancements in the United States.

Kyle,

As you are putting together you DC Mardi Gras schedule, would like to find time to catch up on the sidelines of an event. Let me know if you have any time.

Our Executive VP Daniel Kalms (Gov. previously met w him and our CEO) and LA LNG VP Vanessa Martin will be attending the Economic Development Lunch on Friday. If the Gov. is attending, would be great if they could say a brief hello.

Thanks,

Jon

Tyler:

Thank you for the email. I would like to visit with you sometime in the next week or two and discuss the issue. LMA as an association passed a resolution as it relates to the area in and around Vernon parish. We are interested in the Governor's position.

This is quite a hot topic for many of our mayors.

Thanks.

Hi all,
Here is information for the ExxonMobil Headquarters visit at our Spring Campus on March 11. I know many of you will be at CERA week, so please let me know if this schedule works for you.

The goal of the visit is to provide a “behind the scenes” view of our campus facility (you will tour underground tunnels, visit the “cube,” see inside our rock core testing lab and visit the North American Operations Center for cross-country pipelines) as well as meeting with Low Carbon Solutions management over lunch.

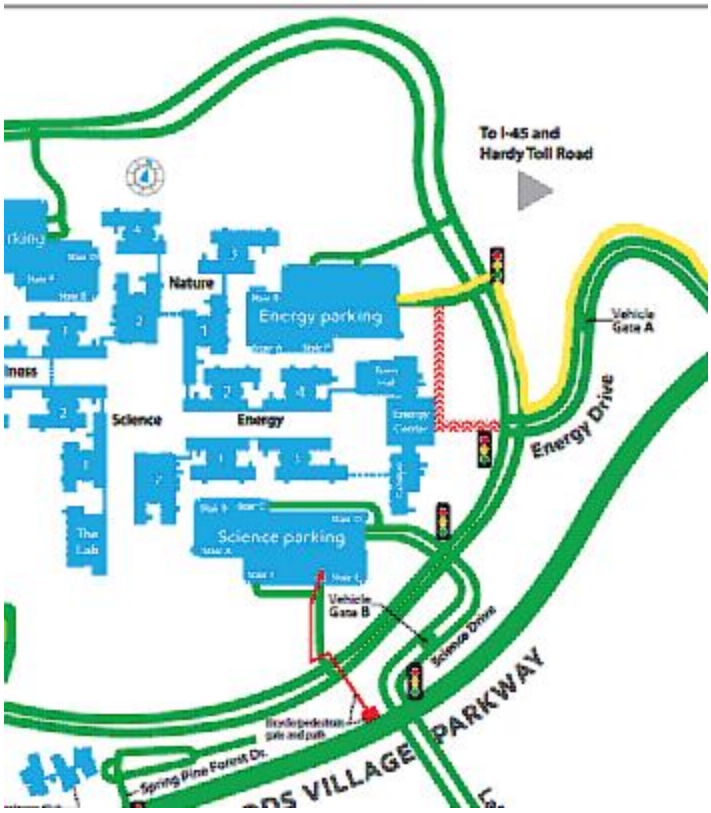

We will address Carbon Capture and Sequestration and CO2 pipeline safety, operations, economics and the supply chain opportunity in Louisiana.

Date: March 11
Time: 10:30 a.m. – 1 p.m.
Location: 22777 Springwoods Village Pkwy, Spring TX (Map below for reference)

If you can attend, please respond to me as soon as possible so I can get you visitor access and detailed instructions.

Also, feel free to pass along this invitation to other regional chamber members, legislators or agency leaders attending CERA week. We want to keep group small, but can accommodate key stakeholders.

Thanks,
Stephanie

Kyle,

We appreciate the Governor making time to meet with us in Houston yesterday.

Per the Governor's request please see the attached one pager on Woodside's Louisiana LNG (LALNG) project in Lake Charles. We would appreciate the Governor highlighting this project at his upcoming White House meetings.

LALNG represents a $15B+ foreign direct investment into Louisiana and will likely be the first greenfield LNG project to achieve a final investment decision under President Trump's Administration.

- LALNG is an under-construction, pre-final investment decision, LNG production and export terminal in Calcasieu Parish, Louisiana. It is a high-quality, scalable development opportunity, with a total permitted capacity of 27.6 million tonnes per annum.
- Woodside has recently come to agreement with Bechtel for engineering and construction work on the facility, including a three-train 16.5 Mtpa foundational development.
- The project also includes an additional 780-acre expansion site which is located to the south. The expansion site could support the development of an additional ~30 Mtpa of LNG capacity.
- Woodside believes that LNG will play a key role in global energy security and is well-positioned to deliver the energy the world needs, particularly for our European allies.
- Woodside is targeting final investment decision readiness for the foundational phase (three-tarin 16.5 Mpta) by end of Q1 2025.

Thanks,

Jon

Woodside Energy | Louisiana LNG

Woodside Louisiana LNG

NOVEMBER 2024

Advancing Woodside Louisiana LNG

Woodside Louisiana LNG is an under-construction, pre-final investment decision (FID), LNG production and export terminal in Calcasieu Parish, Louisiana. It is a high-quality, scalable development opportunity, with a total permitted capacity of 27.6 million tonnes per annum.

Front-end engineering design is complete and site construction has commenced on the project, which contemplates the construction of 5 LNG plants through 4 phases. Bechtel is the selected engineering, procurement and construction contractor.

27.6 Mtpa liquefaction capacity

Acquired 2024

Construction commenced

Targeting FID readiness from Q1 2025

Woodside completes acquisition of Tellurian

Woodside completed the acquisition of Tellurian and its US Gulf Coast LNG development opportunity in October 2024. Upon closing, we renamed Driftwood LNG, Woodside Louisiana LNG. The acquisition represents a new chapter for the company and reinforces our position as a leading independent LNG company, as well as strengthens our portfolio with a high-quality development.

Woodside Energy | Louisiana LNG

NOVEMBER 2024

About Woodside Energy

Woodside Energy is a global energy company, founded in Australia, providing reliable and affordable energy to help people lead better lives. We aim to thrive through the energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

Our global portfolio includes LNG, oil and gas assets across Australia, the Gulf of Mexico, the Caribbean, Senegal, Timor-Leste and Canada. We are contributing to the energy transition by leveraging our track record of reliable operations, strong customer relationships and investing in new energy.

For more information visit **www.woodside.com**

Woodside Louisiana LNG

Supporting the local community

As a global energy company, we are proud to be part of the diverse communities in which we work. We have a strong history of investment in the communities where our employees live and work.

We are committed to building on the significant investment made to date by Tellurian in the community, as well as our existing community programs in the Greater Bayou area.

Woodside Invests $650,000 in Louisiana Communities

In October 2024, Woodside announced the company will invest US$650,000 in Louisiana through the end of 2025, reinforcing the company's commitment to the region and local communities. The investment will fund five community grant programs and enable initiatives that support a broad range of needs across communities in the Greater Bayou area, including environmental preservation, coastal protection, education, workforce development, and capacity building.

Woodside uses this term to describe the characteristic of having lower levels of associated potential GHG emissions when compared to historical and/or current conventions or analogues, for example relating to an otherwise similar resource, process, production facility, product or service, or activity. When applied to Woodside's strategy, please see the definition of lower carbon portfolio.

Secretary Wright Signs Export Authorization for Venture Global CP2 LNG

WASHINGTON, D.C. – U.S. Secretary of Energy Chris Wright today approved an export authorization to the Venture Global CP2 LNG export project proposed for Cameron Parish, Louisiana. This action reflects another step in the Trump administration's commitment to restoring American energy dominance.

“The benefits of expanding U.S. LNG exports have never been more clear, and I am proud to be taking action to support the American people and our allies abroad with more affordable, reliable, secure American energy,” said **Secretary Wright**. “Thanks to President Trump’s leadership, we are cutting the red tape around projects like CP2, unleashing our energy potential and ensuring U.S. can continue to meet growing energy demand for decades to come.”

The issuance to CP2 marks the fifth LNG-related approval from DOE since President Trump took office, following an export approval to Commonwealth LNG on February 14, an order on rehearing removing barriers for the use of LNG as bunkering fuel announced on February 28, an approval providing the Golden Pass LNG terminal more time to commence exports issued March 5, and approval granting the Delfin LNG project additional time to commence exports issued on March 10.

Once constructed, CP2, owned by Venture Global, will be able to export up to 3.96 billion cubic feet per day (Bcf/d) of liquefied natural gas (LNG).

“The CP2 project is another project that has been waiting too long for regulatory action at DOE, and I am glad to see that being corrected today” said **Tala Goudarzi**, Principal Deputy Assistant Secretary of the Office of Fossil Energy and Carbon Management. “With Venture Global’s track record of getting projects constructed quickly, I look forward to seeing this project come to fruition before long.”

Today’s authorization conditionally grants CP2 authorization to export LNG to non-free trade agreement countries from the proposed CP2 LNG project. In the order, DOE finds that LNG exports from CP2 LNG are likely to yield economic benefits to the United States, diversify global LNG supplies, and improve energy security for U.S. allies and trading partners over the course of the export term through 2050. DOE expects to issue a final order to CP2 LNG in the coming months.

CP2 is the third LNG export project that has been developed by Venture Global, with the Calcasieu Pass project coming online in March 2022 and the Plaquemines LNG project beginning exports in late 2024. Accompanying the buildout of LNG export terminals is an increase of natural gas pipelines across the U.S., with approximately 8.5 Bcf/d of pipeline additions for delivery to LNG export terminals recently completed in Texas and Louisiana.

Secretary Wright Signs Export Authorization for Venture Global CP2 LNG

WASHINGTON, D.C. – U.S. Secretary of Energy Chris Wright today approved an export authorization to the Venture Global CP2 LNG export project proposed for Cameron Parish, Louisiana. This action reflects another step in the Trump administration's commitment to restoring American energy dominance.

"The benefits of expanding U.S. LNG exports have never been more clear, and I am proud to be taking action to support the American people and our allies abroad with more affordable, reliable, secure American energy," said **Secretary Wright**. "Thanks to President Trump's leadership, we are cutting the red tape around projects like CP2, unleashing our energy potential and ensuring U.S. can continue to meet growing energy demand for decades to come."

The issuance to CP2 marks the fifth LNG-related approval from DOE since President Trump took office, following an export approval to Commonwealth LNG on February 14, an order on rehearing removing barriers for the use of LNG as bunkering fuel announced on February 28, an approval providing the Golden Pass LNG terminal more time to commence exports issued March 5, and approval granting the Delfin LNG project additional time to commence exports issued on March 10.

Once constructed, CP2, owned by Venture Global, will be able to export up to 3.96 billion cubic feet per day (Bcf/d) of liquefied natural gas (LNG).

"The CP2 project is another project that has been waiting too long for regulatory action at DOE, and I am glad to see that being corrected today" said **Tala Goudarzi**, Principal Deputy Assistant Secretary of the Office of Fossil Energy and Carbon Management. "With Venture Global's track record of getting projects constructed quickly, I look forward to seeing this project come to fruition before long."

Today's authorization conditionally grants CP2 authorization to export LNG to non-free trade agreement countries from the proposed CP2 LNG project. In the order, DOE finds that LNG exports from CP2 LNG are likely to yield economic benefits to the United States, diversify global LNG supplies, and improve energy security for U.S. allies and trading partners over the course of the export term through 2050. DOE expects to issue a final order to CP2 LNG in the coming months.

CP2 is the third LNG export project that has been developed by Venture Global, with the Calcasieu Pass project coming online in March 2022 and the Plaquemines LNG project beginning exports in late 2024. Accompanying the buildout of LNG export terminals is an increase of natural gas pipelines across the U.S., with approximately 8.5 Bcf/d of pipeline additions for delivery to LNG export terminals recently completed in Texas and Louisiana.

Hello,

My name is Isaac Windes and I am a reporter for Energy Intelligence.

I am looking into doing a story on what I believe is the first Class VI well to be issues since Louisiana was granted primacy.

Is it accurate to describe the Hackberry Carbon Sequestration project as the first permit issued?

Would you be able to provide a statement and/or make someone available to discuss this and the status of other Class VI projects?

Let me know and thanks in advance.

I am looking for confirmation as soon as possible and an interview before 2 p.m Central tomorrow if at all possible.

Isaac

ExxonMobil sheds light on its area CO2 projects

Published 7:42 am Saturday, April 26, 2025 By Doris Maricle

A liquid carbon dioxide containment unit stands outside the fabrication building of Glenwood Mason Supply Company in 2023, in the Brooklyn borough of New York. New York is forcing buildings to clean up, and several are experimenting with capturing carbon dioxide, cooling it into a liquid and mixing it into concrete where it turns into a mineral. (Associated Press) ExxonMobil is currently in the initial phases of developing carbon capture projects in Allen Parish, including the Hummingbird and Mockingbird projects, which will be situated in the southern part of the parish, to the west and southeast of Oberlin. “We believe the region around Allen Parish has the right kind of underground rock formations to safely and permanently store CO2 (carbon dioxide),” ExxonMobil’s Carbon Capture, Utilization and Storage (CCUS) Asset Manager Justin Carr said in an email to the American Press. A public hearing regarding ExxonMobil’s permit application for two exploratory Class V wells in Allen Parish will be held at 6 p.m. Wednesday, April 30 at the Allen Parish Civic Center, 609 Tiger Lane in Oberlin. Email newsletter signup Sign up for our daily email newsletter According to company officials, the hearing is part of the Louisiana Department of Energy and Natural Resources’ (LDENR) process for collecting technical comments on the proposed exploratory wells. The format of the hearing will be strictly for technical comments, without any educational presentation, responses to comments, or Q&A session. Each speaker will have two minutes to express technical concerns related to the exploratory wells. Representatives from ExxonMobil will also present a statement during the hearing. The company plans to capture CO2 emissions from Louisiana businesses and permanently store the CO2 over a mile underground. Carr believes this will help local industries create lower-carbon products, keep Louisiana competitive, create jobs, and boost the state’s economy. “While CCS has a global impact, the biggest benefits are felt right here at home,” he said. “Our projects will help build up communities through tax revenue, job opportunities and local outreach.” The benefits to Louisiana include lower-carbon products, tax revenue, job creation and landowner earnings. A typical storage project will result in over $100 million in combined payments to local landowners via lease bonuses, storage fees, and easement payments. ExxonMobil aims to conduct thorough research to enhance its understanding of the geology and ensure any project in the area adheres to strict environmental and safety standards, according to Carr. The company has applied for two Class V permits to install exploratory wells in Allen Parish for research and planning purposes. The wells will not be used to store CO2 underground, according to Carr. If the exploratory wells yield favorable results, separate regulatory Class VI permits will be required to inject and store CO2 at those sites, he said. The American Press has learned that ExxonMobil has already submitted applications to the LDENR for two underground injection control Class VI permits. The permits cover the construction

of wells for the injection and geologic storage of CO2 as part of its Hummingbird sequestration project southeast of Oberlin, near La. 104. The applications were submitted in advance of the April 30 hearing regarding an initial Class V permit. “We’ve applied for two Class VI permits in Allen Parish as part of our evaluation of potential CO2 storage sites,” Carr said. “Filing the applications early is a normal step. It helps the LDENR plan their work schedules and prepare staff to review the application.” The Class Vi permit process is very thorough, and ExxonMobil will provide supplemental information to LDENR throughout the review process, including details from any Class V wells, according to Carr. To secure a Class VI permit, ExxonMobil is required to submit comprehensive site studies, projections of subsurface CO2 movement, detailed plans for CO2 tracking and leak detection and evidence of project management capabilities for the project’s duration. The Class VI regulation also mandates proper plugging of abandoned wells. This involves database reviews, site assessments for undocumented wells, and well plugging to Class VI standards for permanent sealing. The LDENR reviews all applications to ensure compliance and protect underground water sources. If approved, ExxonMobil will connect the sites to its CO2 pipeline system, which has been safely operating in Louisiana for decades, according to Carr. Carr also noted that the storage well is situated on a small site, roughly half the size of half a basketball court. The company will use monitoring wells to ensure CO2 remains stored within the designated geological layer. Carr said the company carefully selects its CO2 storage sites following in-depth analysis to ensure their suitability. The CO2 is stored far underground, secured by thick, sealed rocks, similar to those that have contained oil and natural gas underground for millions of years, he said. “Once the CO2 is stored, we monitor the sites carefully,” he said. “We use a number of technologies to monitor the wells, including flow measurement, pressure sensing, fiber-optic sensors and 4D seismic technology.” Additionally, Carr said the CO2 will be stored miles beneath the Earth’s surface, well below any source of drinking water. “Special Class VI permits are required before any injection to make sure drinking water is protected,” he said. “We can’t get these permits unless the LDENR is confident there will be no impact on drinking water.” Carr also noted that since the Safe Drinking Water Act of 1972, there hasn’t been a single case of drinking water contamination from permitted underground injection. The latest EPA data indicates that over 740,000 injection wells in the U.S., inject trillions of gallons of fluid, including CO2, without affecting drinking water. Several customers want ExxonMobil to transport and store CO2 from their sites. “Right now we have contracts to handle about 14 million metric tons of CO2 each year from across the Gulf Coast,” Carr said. “The CO2 will come from different places, travel through our pipeline system, and be stored at various injection sites along the way.” Three companies – CF Industries (fertilizer), Nucor (steel) and NH3 (natural gas gathering) – have signed CCS agreements with ExxonMobil. ExxonMobil currently manages two Enhanced Oil Recovery projects linked to its U.S. Gulf Coast (USGC) system, where

CO_2 is injected using Class II wells. Louisiana has over 4,000 permitted injection wells. According to Carr, transporting and storing CO_2 is a safe process. "There are over 5,000 miles of CO_2 pipelines in the U.S., and they've been operating safely for over 40 years," he said, noting that pipelines are the safest method for transporting liquids over long distances." He further pointed out that Louisiana has more than 50,000 miles of pipelines within the state, with incidents being infrequent regardless of the substance transported. According to Carr, CO_2 pipelines are designed, built, operated, and maintained under the same regulations and requirements as those used for crude oil, jet fuel, propane, and petrochemical pipelines. Carr stated that the pipeline industry is exceptionally safe. Citing the Liquid Energy Pipeline Association, he noted that CO_2 pipelines have a lower incident rate compared to pipelines carrying other products. Regarding the Satartia, MS, incident Carr explained it was caused by a landslide due to unprecedented rainfall. The landslide exerted extreme force on Denbury's 24-inch steel pipelines, causing them to rupture. A convergence of rare factors, including temperature, humidity, light winds, land topography, and the time of day, facilitated the CO_2's flow downhill towards Satarita. "Safety is our top priority," Carr said. "After ExxonMobil acquired Denbury, we strengthened the pipeline infrastructure and raised safety standards to prevent future problems. We regularly test and maintain our facilities and work closely with local first responders to ensure a quick and coordinated response to any incident." The company is also working on new research to make pipelines safer, specifically focusing on proactive geo hazard monitoring and incident prevention. These efforts have supported the creation of new guidelines for managing CO_2 pipeline emergencies, which have now become the industry standard, he said. To further support safety measures, ExxonMobil has developed specialized training programs designed to equip firefighters with the skills necessary to manage pipeline emergencies effectively. The training, which includes both classroom instruction and hands-on exercises, is conducted in partnership with Texas A&M's Engineering Extension Service (TEEX) at their Baytown Fire Training Field in College Station, Texas. ExxonMobil covers all costs, ensuring that training is accessible at no charge. To date, nearly 1,000 firefighters have been trained through this program, including 78 from Louisiana.

FOR IMMEDIATE RELEASE

Historic Investment: Woodside Energy Announces $17.5 Billion Final Investment Decision for LNG Facility in Southwest Louisiana; Becomes Largest Foreign Direct Investment in State History

LAKE CHARLES, La. – Woodside Energy Group announced its $17.5 billion final investment decision for the foundation of its new liquified natural gas (LNG) production and export facility in Calcasieu Parish, named Louisiana LNG, that is expected to produce up to 16.5 million metric tons (Mtpa) of LNG per year.

This announcement takes its place in both state and national history as being the first greenfield LNG project to reach final investment decision under President Trump's second administration and the largest single foreign direct investment and greenfield project in Louisiana history.

"Woodside's decision to invest in Louisiana is an unmistakable signal to the world that we have what it takes to continue our legacy of powering the globe," said Governor Jeff Landry. "Our 'all of the above' approach to energy is working. We have four active LNG terminals in Louisiana – more than any other state. With more than 30,000 miles of natural gas pipelines, it is clear that when it comes to LNG, Louisiana is the place to be. We are not only promising President Trump's agenda, we are delivering it!"

Louisiana LNG is expected to generate significant economic growth and create new opportunities for the state. The project will support thousands of jobs during the construction phase, as well as thousands more once operational. Importantly, the project will also contribute significantly towards both national and state economic growth and generate billions in additional state and local tax revenues.

"Louisiana LNG is a game-changing development for Woodside and for the state of Louisiana," said Woodside CEO Meg O'Neill. "We are beyond appreciative of the support we have received from Governor Landry, the state of Louisiana and the local community. We look forward to being a strong community partner, driving economic growth and creating new opportunities for the state of Louisiana."

Australia-based Woodside's decision continues Louisiana's momentum of transformational economic development projects that are creating statewide opportunities, building national supply chains and having global impact. These milestone announcements include Meta's $10 billion AI data center in northeast Louisiana and Hyundai Steel Company's nearly $6 billion investment to establish its first North American manufacturing facility in Donaldsonville that will create more than 1,300 direct new jobs.

"Louisiana is in a new era, one that is utilizing our competitive advantages and comprehensive business ecosystem to generate transformational opportunities for our state that have nationwide and worldwide impact," LED Secretary Susan B. Bourgeois said. "The growth we are seeing in the LNG sector is reinvigorating our historic status as a global energy leader, and Woodside choosing Calcasieu Parish to grow their business shows that the work of this administration is positioning all of Louisiana to win."

Louisiana LNG will add to the state's diverse and expansive energy portfolio. Louisiana currently has four operational LNG export terminals, more than any other state, and is responsible for 61% of the nation's LNG exports. The state ranks third in the nation for natural gas production and holds 6% of all U.S. natural gas reserves.

Woodside has a long history in Louisiana with its existing offshore business and is committed to being good corporate citizens. In October 2024, the company invested $650,000 into Louisiana communities to fund five community grant programs and enable initiatives that support a broad range of needs in communities along the Louisiana Gulf Coast, including environmental preservation, coastal protection, education and workforce development.

The company recently supported the Region 5 STEM Center to develop a new innovation lab that will enhance STEM education opportunities for all Southwest Louisiana students and teachers. Woodside is also a Partner in Education with Calcasieu Parish School Board through the Woodside LEAD (Leadership, Enrichment and Development) High School Council, an initiative designed to identify and cultivate the next generation of leaders in the local community.

"We congratulate and welcome Woodside Louisiana LNG to Calcasieu Parish and southwest Louisiana as it moves through its final investment decision," Calcasieu Parish Police Jury President Judd Bares said. "This project will provide quality, well-paying jobs for the area and will also help to grow our local economy. We're looking forward to the positive impact it'll have on our community."

Woodside acquired the Lake Charles project, formerly known as Driftwood LNG, with its acquisition of Houston-based Tellurian Inc. in 2024. The project has a total permitted capacity of 27.6 million Mtpa. Construction is already underway on the foundational development with the first production target in 2029.

"We are extremely excited to see Woodside Energy's Louisiana LNG facility reach the FID milestone," Southwest Louisiana Economic Development Alliance CEO Scott Walker said. "It is a tremendous investment for Calcasieu Parish and Southwest Louisiana. It will strengthen our regional economy, create great jobs, and provide clean, American energy for our strategic allies. Projected to produce 16.5 million Mtpa of LNG per year, Woodside will be able to provide for the growing energy demands around the world while being good stewards within our community. Woodside has been a strong community partner and a strong environmental steward, and we look forward to continuing our partnership in the coming years."

About Woodside Energy

Woodside is a global energy company providing reliable and affordable energy to help people lead better lives. They leverage their track record of world-class project execution and operational excellence to build a diverse global portfolio to meet the world's growing energy needs.

With over 35 years of experience in the LNG industry including pioneering Australia's LNG industry as operator of the North West Shelf Project, shipping their first LNG cargo to Japan in 1989. They are executing major projects today, while pursuing growth opportunities that will deliver long-term value for shareholders. They maintain a strong balance sheet and a disciplined investment approach. Learn more at Woodside.com.

About LED
Louisiana Economic Development is responsible for driving capital investment, job creation and economic opportunity for the people of Louisiana and employers of all sizes. Explore how LED is positioning Louisiana to win at OpportunityLouisiana.com.

Good morning guys please see the attached letter of support from **CO280**. As you recall from our meeting with you on June 5, CO280 is working in a partnership to capture and sequester CO2 at **Packing Corporation of America's (PCA) mill in Beauregard Parrish, LA.** This partnership represents a **near $1B investment** into the PCA mill that **employs nearly 600 people** in Beauregard Parish. Their CO2 pipeline and storage are being provided by **CapturePoint**. As you well know, these investments and the job sustaining and growth potential for critical paper and pulp facilities like PCA's rely upon a timely consideration and issuance of CapturePoint's Class VI permits.

You should anticipate a similar letter of support from PCA soon, as well as letters of support from the larger paper/pulp and forestry industries in Louisiana. Also, were actively implementing strategic community engagement plans in central Louisiana to amplify the voices and support of local employees and contractors in these industries.

Thanks for your support,

Tanner
[redacted] cell

About CO280 (https://www.co280.com/)
CO280 is a private-sector carbon management company focused on large-scale carbon dioxide removal (CDR) in partnership with the U.S. pulp and paper industry. CO280 finances, owns, and operates carbon capture and storage (CCS) projects at pulp mills, transforming the industry into a global leader in permanent carbon removal.

About CapturePoint LLC (https://capturepointllc.com/about)
CapturePoint offers an industry-leading team with extensive experience in all facets of Carbon Capture, Utilization and Sequestration (CCUS). We provide carbon capture system design and installation; construction and management of dedicated carbon dioxide (CO2) pipelines; modernization and operation of CO2-EOR projects; permanent deep underground carbon storage; and carbon management services for energy diversification projects, Direct Air Capture, and other industrial-scale initiatives.
The CPS Central Louisiana Regional Carbon Storage Hub (CPS CENLA Hub) has the potential to be one of the largest onshore deep underground storage centers in the United States, with the capacity to store over two billion

tons of CO2 in the coming decades.

Hey Tanner,

Here's the letter to Governor Landry in PDF. Over to you to get this to the Governor and into the hands of the key people. Hope that's ok. To you and Breck, thank you for your patience.

Best regards,
Jon

JONATHAN RHONE
Co-founder and CEO
T: 604 220 5186; E: jon@co280.com; W: www.co280.com

June 26, 2025

The Honorable Jeff Landry
Governor of Louisiana
Office of the Governor
P.O. Box 94004
Baton Rouge, LA 70804

Dear Governor Landry,

I am writing to express my strong support for carbon capture, and sequestration (CCUS) in Louisiana and to thank you for your leadership in advancing policies that provide clarity and reliability for the CCUS industry and for our partners in the pulp and paper industry.

CO280 partners with pulp and paper companies to capture and permanently store biogenic CO2 from mill emissions, generating carbon dioxide removal (CDR) credits sold to Fortune 100 buyers. CO280 is developing CCUS projects at Louisiana pulp and paper mills. CO280's first project is with Packaging Corporation of America at their DeRidder mill, which employs approximately 560 Louisianans and plays a vital role in the rural economies of Beauregard and Vernon Parishes.

Louisiana's forests have long been vital to its economy, providing economic, environmental, and social benefits. As the top agricultural sector, forestry added $3.8 billion to the state's GDP and supported over 37,000 jobs in 2021. The pulp and paper industry alone accounts for nearly 40% of all forest-based industry revenue and employs over 6,000 Louisianans. However, the industry is facing considerable headwinds including rising costs, geopolitical disruptions and increasing global competition.

CCUS provides an opportunity to invest billions of new capital investment, generate new revenue streams, enhance mill competitiveness, and provide a pathway to long-term sustainability for Louisiana mills. CO280's historic CDR agreement with Microsoft, announced on April 11, 2025, is an example of the type of buyer committed to supporting these projects. CO280's partnership with Louisiana mills will help to secure existing jobs and grow construction related jobs in these communities while positioning Louisiana as a national leader in low-carbon manufacturing.

As part of this opportunity, we appreciate the consideration and issuance of CapturePoint LLC's Class VI permit application for wells in Vernon and Rapides Parishes, which represents a crucial step toward enabling safe, permanent CO_2 storage in Louisiana. In order for CO280 and our pulp and paper partners to reach final investment decisions to build full scale CCUS facilities, we must have a viable sequestration partner ready, and this requires permit issuance and significant lead time for their work and connectivity easements. Projects like this are essential to achieving the comprehensive economic and environmental benefits of CCUS.

Your support for CCUS and pulp and paper industry innovation is important for the long-term competitiveness of these existing Louisiana jobs and for sustaining economic benefits to these rural economies. Thank you for your leadership, commitment, and consideration given to issuing CapturePoint LLC's Class VI permit attention to this matter.

Sincerely,

Jonathan Rhone
President and CEO
CO280 Solutions Inc.

Good morning, Tanner.

Thank you for your note and for continuing the conversation around CCUS.CCUS represents a transformational opportunity—not just for the energy sector, but for a broad range of industries beyond the traditional refinery footprint. From manufacturing and chemicals to cement, steel, and hydrogen production, CCUS can serve as a key enabler of long-term competitiveness and sustainable growth across Louisiana's industrial landscape. It also presents a meaningful path toward more stable operations and stronger financials for pulp, wood, and paper industries by helping manage emissions and unlocking new market/revenue opportunities.

I appreciate your engagement and look forward to continued collaboration.

In partnership,
Paige

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Good morning guys please see the attached letter of support from **CO280**. As you recall from our meeting with you on June 5, CO280 is working in a partnership to capture and sequester CO2 at **Packing Corporation of America's (PCA) mill in Beauregard Parrish, LA.** This partnership represents a **near $1B investment** into the PCA mill that **employs nearly 600 people** in Beauregard Parish. Their CO2 pipeline and storage are being provided by **CapturePoint**. As you well know, these

investments and the job sustaining and growth potential for critical paper and pulp facilities like PCA's rely upon a timely consideration and issuance of CapturePoint's Class VI permits.

You should anticipate a similar letter of support from PCA soon, as well as letters of support from the larger paper/pulp and forestry industries in Louisiana. Also, were actively implementing strategic community engagement plans in central Louisiana to amplify the voices and support of local employees and contractors in these industries.

Thanks for your support,

Tanner
[redacted] cell

About CO280 (https://www.co280.com/)
CO280 is a private-sector carbon management company focused on large-scale carbon dioxide removal (CDR) in partnership with the U.S. pulp and paper industry. CO280 finances, owns, and operates carbon capture and storage (CCS) projects at pulp mills, transforming the industry into a global leader in permanent carbon removal.

About CapturePoint LLC (https://capturepointllc.com/about)
CapturePoint offers an industry-leading team with extensive experience in all facets of Carbon Capture, Utilization and Sequestration (CCUS). We provide carbon capture system design and installation; construction and management of dedicated carbon dioxide (CO2) pipelines; modernization and operation of CO2-EOR projects; permanent deep underground carbon storage; and carbon management services for energy diversification projects, Direct Air Capture, and other industrial-scale initiatives.
The CPS Central Louisiana Regional Carbon Storage Hub (CPS CENLA Hub) has the potential to be one of the largest onshore deep underground storage centers in the United States, with the capacity to store over two billion tons of CO2 in the coming decades.

The Honorable Jeff Landry
Governor, State of Louisiana
Office of the Governor
P.O. Box 94004
Baton Rouge, LA 70804-9004

Dear Governor Landry:

I am writing to express my personal support for the proposed carbon capture and sequestration (CCS) project(s) in Vernon Parish, Louisiana, led by CapturePoint, LLC. This initiative represents a critical opportunity to advance Louisiana's energy leadership, strengthen our regional economy, and address long-term environmental and industrial sustainability.

As you are aware, many rural parishes in Central and Western Louisiana, including Vernon Parish, have faced population decline and slowed economic growth over the past three decades. Projects like this CCS initiative provide a path forward—not just in terms of jobs and capital investment, but in positioning our region as a hub for energy innovation and carbon management.

CapturePoint's commitment and technical credibility offer assurance that the project will be executed safely, with transparency and under the strict guidance of federal and state regulatory standards. The underlying science behind carbon sequestration is well-established, and when properly managed, CCS is a proven tool in reducing greenhouse gas emissions while supporting continued industrial activity.

More importantly, this project has the potential to generate high-quality, skilled jobs in an area where workforce development and economic diversification are urgently needed. Beyond construction jobs of the injection site itself, the trailing investment of industry which could and should be co-located in Vernon Parish and Central Louisiana are of paramount importance.

While public debate and due diligence are critical, I believe it is equally important to highlight the responsible efforts of companies like CapturePoint that are working to bring long-term, solution-driven investment to rural Louisiana.

I respectfully encourage your administration to continue supporting a regulatory and investment climate that allows projects like this to move forward responsibly. With careful oversight and continued community engagement, this CCS project could serve as a model for economic revitalization and

environmental stewardship in the state of Louisiana. Although I am not speaking on behalf of the organizations I currently or previously serve, I do speak on behalf of many citizens and supporters who have common interests and common sense.

Thank you for your leadership and your continued commitment to balancing growth with conservation in our great state.

Sincerely,

Logan O. Morris

July 24, 2025

The Honorable Jeff Landry
Governor of Louisiana
Office of the Governor
P.O. Box 94004
Baton Rouge, LA 70804

Dear Governor Landry,

Thank you for your continued leadership in making Louisiana the nation's capital for all-of-the-above energy strategies and unleashing American energy dominance. I am writing to express support for the issuance of CapturePoint LLC's Class VI permit application for wells in Vernon Parish.

In 2021, I founded Heimdal, an American company that deploys and operates commercial-scale direct air capture (DAC) facilities, which utilize limestone to capture atmospheric CO_2. Heimdal partners with companies that store CO2 permanently in underground geological formations or utilize it for processes or products. Heimdal's DAC process is built on proven, mature technologies used across many industries today. Integrating these technologies into an efficient, low-cost system for carbon removal provides greater certainty in engineering, development, resource sourcing, operation, training, and financial modeling, thereby increasing the project's attractiveness to partners and investors.

In Oklahoma, Heimdal currently operates the country's largest operational DAC facility and work with CapturePoint to revitalize existing energy infrastructure through enhanced oil recovery. CapturePoint has been a great partner that has helped Heimdal bring high-paying jobs to a small, rural community who have seen good jobs and good people leave their area for the better part of three decades.

Here in Louisiana, Heimdal aims to bring that same revitalization to a full-scale facility in Vernon Parish, named Project Feather, which is slated to begin construction in 2026, pending approval of CapturePoint's application. Our $115 million investment in Vernon Parish would result in 500 to 600 construction jobs over two years, followed by 50 to 70 year-round jobs during the facility's 25-year operational period while capturing 100,000 tons of CO_2 per year. Heimdal believes that Project Feather and CapturePoint's CENLA Hub could be one of the most transformational investments in the community, providing residents with high-paying jobs in their community.

HEIMDAL

Thank you for your leadership in advancing policies that provide clarity and reliability for the carbon capture and sequestration industry in Louisiana and for your consideration to issue CapturePoint LLC's Class VI permit expeditiously. Please let me know if I can answer any questions or be of assistance.

Sincerely,

Marcus Lima

The Honorable Jeff Landry

Governor of Louisiana

P.O. Box 94004

Baton Rouge, LA 70804-9004

RE: Support for Economic Development Through Carbon Capture in Vernon Parish

Dear Governor Landry,

I am writing to you as a lifelong Vernon Parish resident, a former board member of the Greater Vernon Chamber of Commerce, and the former news director of Today's Country 105.7. I am reaching out not in any official capacity, but simply as a concerned citizen who cares deeply about the future of our parish and the economic opportunities available to our people.

It is troubling that a business permit which should be evaluated on merit, science, and the potential for economic contribution — has instead become a political flashpoint. The fact that less than 12% of the parish has successfully stalled a private business from proceeding with normal operations is not only disproportionate, but deeply concerning. Our economic future should not hinge on the loudest opposition but rather on facts, opportunity, and long-term vision.

In the interest of transparency, I have been contracted by CapturePoint as a resident to assist with communication. However, this letter is not written from that role. This comes

from someone who watched for over a year before I ever worked with them as CapturePoint tried repeatedly to engage our community. They showed up, they made themselves available, and they were largely shut out.

Letting this permit languish in limbo is doing more harm than good. We cannot expect Vernon Parish to thrive while sending signals to potential investors that even well-regulated, thoroughly vetted industries will be denied a seat at the table due to political pressure or misinformation. The parish has spent decades missing opportunities because no one wants to be the one to say what needs to be said: progress often comes with discomfort, but it is necessary.

A significant portion of Vernon Parish residents want growth. We want jobs. We want options. But we're exhausted by the constant tug-of-war with those whose minds are impervious to logic, science, or economic reasoning. CapturePoint has made extensive efforts to speak with opponents of carbon capture many times and it has become clear that no amount of information will sway their beliefs. The question now is: why are we allowing that inflexibility to dictate the economic trajectory of an entire parish?

Vernon Parish is often stereotyped not unfairly as being stuck. We complain there's never anything here, yet when the opportunity arises to be more than "just a stagnant town," opposition rallies to block it. If we are serious about changing that narrative, we have to stop giving the power to those who resist all progress.

If what you need to hear is a Vernon Parish resident saying please — then please, Governor Landry, support our right to grow. Support industry that wants to invest here. Support the future of our children and grandchildren by ensuring we are not left behind once again.

Thank you for your leadership and attention to this matter.

Sincerely,

Jessica Herring

Houston, TX 77002

July 25, 2025

The Honorable Jeff Landry
Governor of Louisiana
Office of the Governor
P.O. Box 94004
Baton Rouge, LA 70804

Dear Governor Landry,

As you are likely aware, Energy Transfer owns and operates several natural gas treating facilities in the Haynesville production area. Energy Transfer is working with CapturePoint Solutions LLC on a project to capture CO_2 from these facilities and transport the CO_2 to Capturepoint's sequestration sites in central Louisiana named the Central Louisiana Regional Carbon Storage Hub (CENLA Hub). In this regard, Energy Transfer has executed a Letter of Intent and a CO_2 Offtake Agreement with CapturePoint pursuant to which Energy Transfer committed to dedicate the CO_2 from these Haynesville treating facilities for sequestration at the CENLA Hub. Energy Transfer and CapturePoint have also created a framework for working together to capture and store CO_2 from other Energy Transfer facilities in Louisiana.

In order for Energy Transfer and CapturePoint to make a final investment decision to build the required capture facilities, pipelines and execute the desired carbon capture and sequestration projects, our sequestration partner (CapturePoint) must be ready to sequester CO_2. Therefore, I am writing to express support for the prompt issuance of CapturePoint's Class VI permit application for wells at its CENLA Hub in Vernon and Rapides Parishes.

Your support of carbon capture and sequestration project in Louisiana will promote continued oil and gas exploration with reduced emissions, cleaner air quality, community development and local job opportunities. Thank you for your consideration of the issuance of CapturePoint's Class VI permit. Please let me know if I can answer any questions or be of assistance.

Sincerely,

Tom Mason

July 28, 2025

TO: The Honorable Jeff Landry

Dear Governor Landry,

As a lifelong resident of Vernon Parish, a board member of the Greater Vernon Chamber of Commerce, and a mortgage lender licensed in both Louisiana and Texas, I'm writing to you as someone who not only relies on the health of our economy but also as someone who truly cares about our community's future and the opportunities we're missing.

A private company, CapturePoint, has applied for permits to develop a carbon capture and storage project in Vernon Parish capturing CO_2 from industrial sources and storing it underground under state and federal oversight. What should be a merit- and science-based decision has become a political flashpoint.

CapturePoint has made the effort. They've gone through the regulatory process, met safety standards, and worked to answer questions from the community. They've shown up, answered questions, and tried again and again to engage with the public — and much of that was met with resistance or silence. And now their permit is stuck in limbo. The permit, I believe, has only been delayed due to strong opposition from a small percentage of residents.

This opposition group makes up less than 12% of the parish, yet their resistance has effectively put the project on hold. That's concerning, because it sends a message to any company looking to invest in our area that even if they follow the rules and meet every requirement, their project could still be blocked. We can't expect Vernon Parish to grow and thrive if we continue sending the signal that new businesses aren't welcome.

We can't build a stronger local economy by turning our backs on every industry that dares to show interest. We've done that for too long, and it's why we keep watching other communities grow while we fall further behind.

I'm not asking you to ignore concerns — I'm asking you to lead with common sense and courage. A lot of us *want* this growth. We want the jobs, the tax base, the chance for our kids and grandkids to have more reasons to stay here. But it's discouraging to constantly battle misinformation and fear, especially when the facts and science are on the table and still ignored.

Governor, we need your support. We need a clear sign that Louisiana is open for business — especially in rural parishes like ours that have been overlooked for far too long.

Thank you for your leadership and for hearing the voice of someone who’s stayed, who’s invested, and who still believes Vernon Parish can be more.

Sincerely,

The Honorable Jeff Landry
Governor of Louisiana
Office of the Governor
P.O. Box 94004
Baton Rouge, LA 70804

Dear Governor Landry,

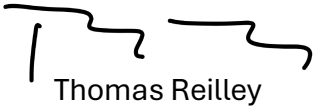

Highland Pellets is committed to advancing energy solutions while creating forest industry jobs for future generations. As a leader in the biomass industry, we operate two world-class facilities in Arkansas that employ over 200 direct positions and support more than 300 indirect jobs within the regional forestry industry. Building on this success, we are actively pursuing development of a new site in Louisiana that will bring similar economic benefits to the state.

We recognize that carbon capture and sequestration (CCS) is critical to creating a more resilient energy landscape. Our team is working with CapturePoint Solutions LLC to integrate CCS into our future Louisiana operations. CapturePoint's Central Louisiana Regional Carbon Storage Hub (CENLA Hub) provides the infrastructure necessary to permanently store CO2, ensuring that our expansion aligns with Louisiana's forest economy priorities. By combining our biomass operations with advanced CCS technologies, Highland Pellets is positioned to deliver a truly carbon-negative energy model that sets a new benchmark for the industry.

To make this vision a reality, timely approval of CapturePoint's Class VI permit application for wells at its CENLA Hub in Vernon and Rapides Parishes is essential. This will unlock the infrastructure needed to support projects like ours, driving high-value investment, creating skilled jobs, and supporting the forestry industry that is vital to Louisiana's economy.

Louisiana is uniquely positioned to lead the nation in CCS innovation. Your support will help ensure that projects like ours continue to drive growth, forest stewardship, and long-term economic development for local communities. Thank you for your leadership and consideration of this important initiative. Please let me know if I can provide additional information or assist in any way.

Sincerely,

Thomas Reilley

Dear Mr. Ruckert,

I am a lifelong resident of Leesville, LA, and I am a registered voter in Vernon Parish.
Phoenix Rexall Drugs, Inc is a family business that has been owned and operated since 1970.
I have been involved in community service my whole life and committed myself to the economic development for Vernon Parish over the last decade.

I am not opposed to carbon capture sequestration in Vernon Parish, and I am in support of CapturePoint's permit in this parish. The noise against CCS and the loud voices that have gotten the bulk of the attention do not represent my view point or that of many others in this community.

While I may not be fully convinced on the science behind CCS, I am certain that the economic benefits to our state and the economy of Central Louisiana far outweigh any potential harm.

It is my understanding that CapturePoint has met all of the requirements for La DENR to approve their permit application.
It is my opinion that the sooner this permit is granted, the sooner the brouhaha will begin to subside.

The hard-core opposition will always exist, but once the people on the periphery begin to see the economic advantages of CCS to our community, the sooner the loud roar and chaos will diminish.

Please feel free to contact me with any further questions or concerns.
My personal cell phone is 337-208-8915.

Sincerely,

CWJ

Kyle and Tyler,

Please see below regarding another LNG Export Authorization for Venture Global.

Thanks,
Hunt

DOE Issues Final non-FTA LNG Export Authorization for Additional Exports from the Venture Global Calcasieu Pass Project

WASHINGTON– U.S. Secretary of Energy Chris Wright today signed a final authorization for additional liquefied natural gas (LNG) exports to non-free trade agreement (non-FTA) countries from Venture Global's Calcasieu Pass project in Cameron Parish, Louisiana. This authorization allows Calcasieu Pass, an LNG export project that has been in operation since 2022, to export an additional 20 billion cubic feet of natural gas as LNG per year—an amount that could support approximately five additional cargos per year.

"Thanks to President Trump's leadership, the United States has made massive leaps in unleashing LNG dominance," said **Secretary Wright**. "Today's authorization is another reminder that this administration is committed to expanding the supply of abundant, affordable, and secure American energy. The data over the past 10 years of U.S. LNG exports clearly shows that we can lead the world in energy production while lowering energy costs here at home."

"With this decision, DOE is continuing to return to regular order on LNG exports," said **Tala Goudarzi, Principal Deputy Assistant Secretary of the Office of Fossil Energy and Carbon Management**.

Venture Global's Calcasieu Pass project has been exporting LNG to the global market since March 2022. Venture Global's second LNG export project, Plaquemines, began exporting late in 2024, and Venture Global recently announced a final investment decision on Phase 1 of its third LNG export project, CP2. On March 19, 2025, DOE issued a conditional non-FTA export authorization to CP2 that is ready for a final order now that FERC has concluded its review of the project.

U.S. natural gas production and exports are currently at record highs, averaging 105.9 billion cubic feet per day (Bcf/d) and 14.6 Bcf/d in 2025, respectively, according to the U.S. Energy Information Administration's latest

Short-Term Energy Outlook. Thanks to President Trump's bold energy agenda, U.S. LNG exports are on track to double around the end of this decade once all export projects under construction are completed.

Subject: Support for Carbon Capture in Vernon Parish

Dear Kyle,

I'm writing to you today as a business owner, and also as the 2nd Vice President of the Greater Vernon Chamber of Commerce and current President of the Leesville Lions Club. For clarity, this letter reflects my personal position as a business owner; my roles with the Chamber and Lions Club require neutrality.

It's not without risk that I write this. The opposition to carbon capture is vocal and passionate. I don't believe they represent the majority—just the loudest voice in the room. I hold no resentment toward them; in fact, I believe they genuinely care about our community. I was once among them, sharing information I later discovered wasn't entirely accurate. So why take this position now? Let me share a bit about myself and my business.

In 2009, I left the corporate world to become a small business owner. I opened Slagle Mall in 2010—a one-stop shop for our community. We're a Chevron gas station, a Purina feed dealer, a grocery and hardware store, a propane refill station, and home to the local post office. We also serve plate lunches seven days a week in our Saw Mill Café.

When I started, Vernon Parish's economy was thriving. Within two years, I expanded—building a warehouse for a standalone feed and hardware store and renovating our local car wash. Business was booming, and so was our community.

Then came the BRAC announcement: Fort Polk was on the list. I didn't grasp the impact at first, but it quickly became clear. Families moved away. Businesses closed. Services I relied on began to disappear. That trajectory hasn't reversed. It's not sustainable. Something must change.

This isn't just economic—it's deeply personal. When jobs vanish and businesses close, moral erosion follows. I've watched children grow up in my store—once full of hope, now battling addiction and despair. Theft has nearly bankrupted me: counterfeit money, gas theft, organized fuel crimes, even employees stealing. The sheriff's department reviews my surveillance footage weekly. Something must change.

There's a moral question here: Is it right to keep people poor?

I'm not advocating for Vernon Parish to become the state's dumping ground. But after extensive research, I see a different picture. Businesses want to invest here. Just yesterday, Hyland spoke to our club. They're offering 200 permanent jobs and up to 450 indirect jobs—good-paying, community-building jobs.

Their operations could attract other industries. For example, their need to discharge hot and cold water could support data centers or geothermal partnerships with Fort Polk. In Pine Bluff, Arkansas, Hyland partners with Tyson to repurpose hot water. Their model fits Vernon Parish—and could drive infrastructure improvements like upgraded railways to move wood pellets to Lake Charles ports. That momentum could even accelerate the completion of the I-14 project, unlocking economic potential across Louisiana.

I want Vernon Parish to be a model of what's possible. If we do this right, we could lead Louisiana in economic development. Some may call that a pipe dream—but I'm committed to making it reality. I love Vernon Parish. It's my home. I love its people.

Let's be bold. Let's take the steps necessary to transform our community—and our state.

Sincerely, Robert Haymon

Owner, Slagle Mall LLC

Kyle, Millard and Stephen,
I wanted to provide you with a few updates on ExxonMobil's outreach efforts related to pertaining to our Low Carbon Solutions business in Louisiana. I appreciate you sharing this update with Gov. Landry. We look forward to sharing a more comprehensive outreach summary with him soon.
First, on Aug. 4, the Allen Parish Police Jury rescinded their injection well ordinance that would have prevented our ability to perform testing on appraisal wells in the parish under our LDENR Class V permit. In response, ExxonMobil has rescinded its lawsuit. Outreach and investment in the parish continues, and we have been investing in teacher training with more than 40 Southwest Louisiana educators with a one-week STEM (Science, Technology, Engineering, and Math) professional development camp at SOWELA Oakdale Campus. To hear input on from local attendees, please *see this short video*. We plan to meet with Police Jury members and local leaders tomorrow to discuss further economic and community collaborations.
On Aug. 12, ExxonMobil's Class V hearings for appraisal wells in Iberville and St. Landry Parish were brief and included positive comments from many attendees. Please note the attached letter of support from St. Landry Parish Jessie Bellard.
We are continuing to listen to and inform local leaders in all parishes. Also, our commitment to invest in these parishes is strong. We're providing free fire training for parish responders, investing in local teacher and student education, and supporting unique parish priorities – from healthcare to emergency preparedness.
We appreciate your ongoing support of ExxonMobil's CCS business opportunities across Louisiana and look forward to bringing investment to our state.
Sincerely,
Stephanie Cargile

Jessie Bellard, *Parish President*

August 8, 2025,

Dear Governor Landry,

As Parish President, I've always believed that progress begins with openness to opportunity. Here in St. Landry Parish, we welcome conversations with companies looking to invest in our people and our future — and we're already seeing real momentum.

Earlier this summer, ExxonMobil's Low Carbon Solutions team approached us with interest in carbon capture and storage (CCS) in our parish. What began as weekly discussions has quickly evolved into daily coordination built on transparency and shared goals around economic development, education, and community impact.

ExxonMobil's approach goes beyond technology — it's rooted in true partnership. They've deepened their engagement locally, including meaningful collaboration with Superintendent Milton Batiste and the St. Landry Parish School District to support students, educators, and workforce development.

We recently hosted a roundtable with Louisiana Economic Development to align next steps, with a focus on parish initiatives, first responders, and ensuring local voices are prioritized.

This is just the beginning. I continue to work closely with ExxonMobil to support efforts that benefit our entire community. If you'd like to discuss this further, I'm just a phone call away.

St. Landry Parish is ready to lead by example. When you're open to opportunity, progress follows.

Sincerely,

Jessie Bellard

Embargoed Until 3:00PM ET or Until Released

DOE Grants Lake Charles LNG Additional Time to Commence Exports

WASHINGTON– U.S. Secretary of Energy Chris Wright today signed an amendment order granting additional time for Energy Transfer's Lake Charles LNG Export Company, LLC to commence exports of liquefied natural gas (LNG) to non-free trade agreement (non-FTA) countries from the Lake Charles LNG project in Lake Charles, LA. Once fully constructed, the Lake Charles LNG project will be capable of exporting up to 2.33 billion cubic feet per day (Bcf/d) of natural gas as LNG.

"On the heels of President Trump's historic trade negotiations, demand for secure, reliable American LNG is surging," said **Secretary Wright.** "The Department of Energy is ensuring companies like Lake Charles LNG are prepared meet this global demand while advancing commonsense policies that support American jobs and lower energy costs here at home."

"Granting this commencement extension furthers the Trump Administration's priority of unleashing American Energy, a radical shift from the last administration, whose actions undermined the progress of Lake Charles LNG for years," said **Tala Goudarzi, Principal Deputy Assistant Secretary of the Office of Fossil Energy and Carbon Management**.

Lake Charles LNG was originally configured as an LNG import terminal, but is now being developed as an LNG export terminal. Recently, the company signed several long-term LNG off-take contracts, including agreements with Chevron and Kyushu Electric Power Company.
The United States is the largest global producer and exporter of natural gas. There are currently eight large-scale LNG projects operating in the United States and several additional projects are expanding or under

construction. Under President Trump's leadership, the Department has approved applications from projects that will export more than 13.8 billion cubic feet per day (Bcf/d) of natural gas as LNG, a volume greater than the world's second-largest LNG- exporting nation is exporting today.

State of Louisiana
OFFICE OF THE GOVERNOR
P.O. BOX 94004
BATON ROUGE
70804-9004

Jeff Landry
Governor

September 29, 2025

The Honorable Howard Lutnick
Secretary, U.S. Department of Commerce
1401 Constitution Avenue NW
Washington, DC 20230

Secretary Lutnick,

I begin by commending the Trump Administration's strong leadership on energy policy. By strengthening American energy security, advancing U.S. energy dominance, and promoting domestic manufacturing, you have positioned our Nation for long-term growth and resilience. These priorities are deeply important to Louisiana, which continues to serve as the epicenter of America's energy and LNG industries.

I must call your attention to a project in Southwest Louisiana that was stalled under the Biden Administration – a setback that undermined Louisiana's workforce, blocked major private investment, and slowed progress toward energy security. Thanks to the Trump Administration's leadership, Commonwealth LNG is now well-positioned to move forward and strengthen America's role as the global leader in LNG exports.

Commonwealth is developing a 10 mtpa liquefaction and export terminal in Cameron Parish. Once operational, this facility will represent a $4.5 billion direct investment in Louisiana – creating over 2,000 construction jobs and more than 200 permanent, high-paying jobs. Within Caturus, Commonwealth will be the sole LNG exporter operating in a fully integrated natural gas and export platform, supported by the company's 650 mmcfe/d net production, ramping to more than 1 Bcfe/d during the next few years, in the Eagle Ford Shale of South Texas. This innovative wellhead-to-water strategy exemplifies the kind of forward-looking energy development the administration has championed.

However, as you know, there are currently no U.S. manufacturing yards with the scale or technical expertise to construct the specialized liquefaction modules required for this project. For Commonwealth to proceed with certainty, it must have clarity around the tariff liability associated with its overseas build.

Currently, Commonwealth has an established tariff contingency of $500 million in its project financing budget; and ongoing equity and lender financing discussions for the last year have contemplated that amount. However, the actual tariff liability to the company could end up being much more or much less than that amount – creating significant uncertainty for project lenders and prospective equity owners and making it difficult to finalize that process. As a result, Commonwealth LNG is seeking clarity and certainty: rather than directing these resources toward tariffs, Commonwealth seeks to partner with the federal government to reinvest those funds into projects that directly advance the Trump Administration's economic, trade, and energy priorities.

For example, Commonwealth would commit to:

- **$100 million** to expand shipbuilding yards and technical capacity in Louisiana;
- **$10 million** in maritime scholarships and training for American citizens, including programs at the University of Louisiana Maritime Academy;
- **$200 million** in down payments toward four U.S.-flagged LNG vessels, ultimately representing more than **$1 billion** in capital investment; and
- **$200 million** anchor equity investment in the Alaska LNG Project, one of the Trump Administration's signature priorities.

In return, Commonwealth respectfully requests that a hard cap of **$510 million** of capital investment in Administration priorities be made in lieu of tariffs applicable to the import of its liquefaction modules, a measure that will provide the needed certainty to unlock financing and ensure the project's successful completion. In doing so, Commonwealth is willing to invest these dollars broadly in capital projects aligned with the Administration's priorities.

These are not investments that Commonwealth would have otherwise made at this juncture. However, they believe these investments will significantly strengthen the U.S. LNG, shipbuilding, and maritime industries, while reducing U.S. reliance on foreign nations; and as a result, they are directly in line with the kind of investments the Trump Administration is trying to incentivize companies to make in the near term.

Mr. Secretary – with your support – Louisiana and Commonwealth LNG can together advance America's energy independence, invigorate domestic industry, and strengthen our Nation's global leadership. This project not only benefits Louisiana and its citizens, but also serves the broader interests of the United States.

Respectfully,

Jeff Landry
Governor

Dear Dep. Sec. Swiber,

I hope all is well with you. I've intended to reach out since we met at the Tulane Future of Energy Symposium last month, but I know you and Sec. Davidson have been swamped with limited resources, permitting demands, and LDENR reorganization.

As I know you're well aware, there was quite a trio of impactful votes held in Vernon Parish supporting CCUS on the Monday following our Friday meeting in New Orleans. And I just wanted to say thank you for all you're doing to streamline the permitting review process and for keeping us and our partners at CapturePoint in mind.

I'd planned to be in Baton Rouge tomorrow for the LSU Energy conference but am obligated at some community engagement meetings related to our project in central Louisiana. But please don't hesitate to give me a shout in the days ahead if you or your team have any questions, concerns, or need any support from us about the economic boon to come from our capital investments in rural LA. One key distinguishing factor of our CCS projects is that we partner exclusively with pulp & paper mills. The JV partnership provides a new revenue stream to the mills, setting them apart in a forestry product market facing significant foreign competition, and keeps those rural domestic mill jobs secure for decades to come.

Would love to talk more soon.

Sincerely,
Alex

Importance: Normal

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Millard and James,
Please see update below regarding ExxonMobil's pending permits for awareness.
I'm updating you, LC&E and LED, per the Governor's request, on our upcoming CO2 related permits.

Thanks,
Stephanie

- **ExxonMobil Pipeline Company will have an item for introduction only on tomorrow's (Oct. 15) St. James Parish Council agenda.** This item is related to its recently approved CO2 pipeline lateral. A formal vote on the item will take place Nov. 5. If you recall, the lateral will connect Nucor to the US Gulf Coast CO2 pipeline system. This new agenda item enables administrative clean up to ensure right-of-way access to property that is owned by St. James Parish but is leased by Nucor. While we anticipate full council approval, we want to ensure that you are aware of this upcoming agenda item.

- ExxonMobil originally filed three pipeline applications for a short pipeline connecting the proposed **Lake Charles Methanol** facility to the existing CO2 pipeline in Calcasieu parish. The three applications were: One Application to Construct and Operate; two Certificate of Public Convenience and Necessity—one certificate for EOR and one certificate for CCS. EM withdrew the Application to construct/operate, and the September hearing for the Certificates was paused indefinitely. In 4Q 2025, ExxonMobil plans to **file for an amendment to the existing EOR certificate** that Denbury obtained in 2014. We anticipate a hearing in December. Per regulatory requirements, information will be mailed to landowners on the pipeline route, and the company plans additional outreach as well. **No other certificates regarding the CO2 pipeline will be pursued at this time.**

- To support safety and operational integrity, we are proactively planning a series of modernization initiatives at our **enhanced oil recovery (EOR)** site in and around **Delhi, La, located in Richland Parish**. As part of this scope, our organization will conduct a seismic survey across portions of Richland and Madison Parishes. The seismic survey campaign is tentatively scheduled for late this year or early Q1 2026. Permitting will occur via the Louisiana Department of Wildlife and Fisheries and require a public hearing anticipated to occur in November. Outreach is planned for local and state stakeholders.

EXTERNAL EMAIL: Please do not click on links or attachments unless you know the content is safe.

Kyle,

Thanks for your kind works and support yesterday at BCI. The State's show of support continues to impress our executive leadership team and reinforces that Louisiana is open for business. Flagging last nights LALNG announcement for your below.

Thanks,

Jon

Woodside Energy just announced a strategic partnership with Williams, a leader in US natural gas infrastructure, for an integrated investment in Louisiana LNG.

The partnership with Williams includes the sale of a 10% interest in Louisiana LNG and an 80% interest and operatorship of the project's permitted lateral pipeline for US$250 million, effective 1 January 2025.

The partnership combines Woodside's proven track record in developing and operating LNG facilities and global marketing with Williams' expertise in pipelines and gas sourcing. This creates a tremendous partnership to realise opportunities as global energy demand grows.

- Woodside has reached a key milestone for Louisiana LNG, signing and closing a transaction with Williams, a world leader in US natural gas infrastructure, for an integrated investment in the game-changing project.
- The strategic partnership involves the sale by Woodside of a 10% interest in Louisiana LNG and an 80% interest and operatorship of the permitted lateral pipeline (Line 200) for $250 million, at the effective date of 1 January 2025. The total proceeds received are $378 million including proportionate CAPEX reimbursement since the effective date.
- Williams will contribute its share of the capital expenditure for the LNG facility and pipeline, approximately $1.9 billion and assume LNG offtake obligations for 1.5 Mtpa.
- Williams is a well-established operator in the US, currently managing over 33,000 miles of pipeline across 24 states. Their expertise will be integral as they construct and operate the Line 200 Pipeline to the Louisiana LNG Terminal.
- This partnership secures capital and offtake commitments for Woodside and brings onboard a strategic partner with complementary capabilities.
- It marks a significant step towards realising Woodside's strategy for Louisiana LNG and establishing the company as a global LNG powerhouse.

- Williams' investment in Louisiana LNG is a testament to the quality of the project and the compelling opportunity of the rapidly growing global LNG markets.

In other LALNG project news, we announced in our Q3 report the first LNG train is 25% complete and the overall three train project is 19% complete. LNG tank vertical construction has commenced, and first deliveries of structural steel and process piping were received for Train 1 construction.

Thanks,

Jon

Good afternoon,

Please find attached a copy of the following Executive Orders that were recently issued by Governor Landry:

JML 25-119- CO2 Capture and Storage Limits and Moratorium;
JML 25-120- State of Emergency Maximum Security Camp J Repairs and Operation Louisiana State Penitentiary;
JML 25-121- Renewal of State of Emergency- Hurricane Ida;
JML 25-122- Renewal of State of Emergency- Threat of Subsidence, Subsurface Instability, and Presence of Hydrocarbons in Sulphur Mines Salt Dome Area; and,
JML 25-123- State of Emergency Schumer Shutdown Creates Food Insecurity.

Thank you.

Monica Reed
Assistant to Executive Counsel
Office of Governor Jeff Landry

State of Louisiana

EXECUTIVE DEPARTMENT
OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER JML 25-119

CO_2 CAPTURE AND STORAGE LIMITS AND MORATORIUM

WHEREAS, on January 20, 2025, President Trump signed Executive Order 14154, titled "Unleashing American Energy," which directs all agencies to review regulations and propose deregulation through efficient permitting, specifically removing the social costs of CO_2 from calculations in any federal permitting or regulatory decision;

WHEREAS, on February 14, 2025, President Trump established the National Energy Dominance Council, through Executive Order 14213, finding it necessary to expand all forms of reliable and affordable energy production to drive down inflation, grow the economy, create good-paying jobs, reestablish American leadership in manufacturing, lead the world in artificial intelligence, and restore peace through strength by wielding commercial and diplomatic levers to end wars across the world;

WHEREAS, on April 8, 2025, President Trump signed Executive Order 14261, to reinvigorate American's clean coal industry and make it a national policy and priority to support "the domestic coal industry by removing Federal regulatory barriers that undermine coal production, encouraging the utilization of coal to meet growing domestic energy demands, increasing American coal exports, and ensuring that federal policy does not discriminate against coal production or coal-fired electricity generation;"

WHEREAS, President Trump continues to champion energy innovation by advancing technologies such as clean coal and CO_2 capture and storage, in order to secure a more sustainable, reliable, and prosperous energy future;

WHEREAS, President Trump has identified dangerous state and local energy policies as direct threats to the nation's domestic energy supply, warning that such actions jeopardize "our Nation's core national defense and security needs, and devastate the prosperity of not only local residents but the entire United States population;"

WHEREAS, Louisiana plays a central role in our nation's energy, transportation, and petrochemical sectors, producing the second-largest volume of oil and gas in the United States and President Trump's executive orders on energy necessitate constant evaluation of Louisiana's own energy policies and laws;

WHEREAS, Louisiana's refineries account for 16% ($1/6^{th}$) of the country's refining capacity, and its network of pipelines transport 90% of the nation's offshore energy production and 30% of the total oil and gas supply, making it essential to national energy security. However, the volatility of the oil and gas industry has, at times, created a stagnant economy for our state;

WHEREAS, Louisiana's extensive industrial infrastructure—including pipelines, liquefied natural gas ("LNG") facilities, a highly skilled energy workforce, and expansive port system, is in conformity with President Trump's policies, and it uniquely positions the State as a national leader in CO_2 capture and storage, capable of seamlessly integrating CO_2 capture into existing processes, enhancing America's energy competitiveness globally;

WHEREAS, Louisiana, for over 40 years, has injected CO_2 into the geological formations of our state for the use of enhanced oil recovery ("EOR") in projects;

WHEREAS, CO_2 has been safely transported via pipelines across Louisiana since 1986;

WHEREAS, Louisiana's unparalleled capability to produce, transport, process, utilize, and liquefy natural gas while simultaneously sequestering CO_2 entirely within its borders, and its position on the Gulf of America, makes the state indispensable to the pursuit of energy dominance, fostering strategic reliance from European and Asian markets seeking dependable, large-scale carbon-neutral feedstocks, thereby solidifying Louisiana's role at the forefront of global energy leadership and economic competitiveness;

WHEREAS, CO_2 capture and storage will extend Louisiana's presence in energy by creating 17,000 potential new jobs, investing seventy-six billion dollars in potential capital for communities throughout Louisiana from announced projects alone, and driving economic growth on a scale unimaginable for Louisiana;

WHEREAS, CO_2 capture and storage will provide additional revenue sources for local governments, has the potential to create a more diversified economy for Louisiana, and continue to serve as a catalyst for multiple industries, while sustaining and enhancing existing industries;

WHEREAS, Louisiana, with its natural geological formations, provides a favorable subsurface environment for CO_2 storage;

WHEREAS, the Environmental Protection Agency ("EPA") is authorized to develop requirements and provisions for Underground Injection Control ("UIC") pursuant to the Safe Drinking Water Act ("SDWA") of 1974—a federal law establishing comprehensive standards to protect public drinking water from contaminants;

WHEREAS, since 1982, Louisiana has maintained primary enforcement authority ("primacy") for the UIC program, ensuring that the State's regulation of injection wells remains consistent with federal requirements;

WHEREAS, just five states, Arizona, Louisiana, North Dakota, West Virgina and Wyoming, have primacy for Class VI wells;

WHEREAS, Louisiana is the only state to have primacy in the U.S. Environmental Protection Agency ("EPA") Region 6; however, neighboring states are rapidly pursuing primacy for Class VI underground injection well permits for CO_2;

WHEREAS, in the summer of 2025, the EPA announced its proposed approval of permitting for Class VI underground injection wells in Texas under the SDWA, and we anticipate that Class VI permits will be issued in Texas in the very near future;

WHEREAS, Louisiana, ahead of other states with regard to CO_2 regulations, has continued to enact laws to ensure the health and safety of Louisiana citizens with regard to CO_2. The Louisiana Legislature passed, unanimously, Act No. 517 of the 2009 Regular Session, the Louisiana Geologic Sequestration of Carbon Dioxide Act, granting the Louisiana Department of Conservation and Energy (the "Department"), the authority, now codified in R.S. 30:1104, to promulgate rules, regulations, and issue orders and permits;

WHEREAS, Class VI wells must comply with existing laws and the rules, regulations, and orders issued by the Department including Louisiana's Statewide Order No. 29-N-6 (LAC 43:XVII, Subpart 6) and the SDWA of 1974;

WHEREAS, with a balanced approach, considering concerns of citizens and investing in economic growth, CO_2 capture and sequestration will provide an opportunity to lift citizens of Louisiana out of poverty;

WHEREAS, reasonable limits and regulation of CO_2 capture and sequestration is necessary, since Louisiana also has a vital obligation to protect the health, safety, and welfare of its citizens and the environment;

WHEREAS, the injection and long-term storage of CO_2 in deep geologic formations—commonly referred to as Class VI wells are specialized injection wells designed exclusively for the geologic sequestration of CO_2 distinct from other classes of injection wells regulated under separate statutory and regulatory frameworks;

WHEREAS, since Louisiana has obtained Class VI primacy, applications for 33 carbon sequestration projects have been filed with the Department, and each application is estimated to require approximately 2,000 hours of review between its submission and a permit decision being made;

WHEREAS, it is imperative that the Department be allowed to put into place a well-thought-out and methodical approach to application review and permitting that takes into consideration of the safety of our citizens and environment and that streamlines the process for greater efficiency;

WHEREAS, the federal government through the Pipeline and Hazardous Materials Safety Administration ("PHMSA") has been engaged in strengthening CO_2 pipeline safety requirements ("PHMSA–2022–0125"), and the proposed federal rules for CO_2 pipelines—consistent with Louisiana's Statewide Order 29-N-6 and LAC 33:V ("Hazardous Wastes and Hazardous Materials") requirements—provide a framework mandating that pipelines be designed, constructed, and operated with enhanced safety measures, including:

A. Clearly defined emergency planning zones
B. Thorough corrosion control measures.
C. Automatic shut-off valves in strategic locations.
D. Expanded public awareness programs.
E. Mandatory minimum setback distances from residential communities.
F. Comprehensive emergency response protocols.
G. Enhanced design features to protect against pipeline shearing or rupture and monitoring requirements.

WHEREAS, to support balanced economic growth and safeguard public trust, I, as Governor, have heard the concerns of citizens and communities and am stepping in to require agencies to work together—particularly the Department and Louisiana Economic Development ("LED") to:

A. Evaluate economic potential for projects associated with Class VI applications, reporting on their projected economic impact including local and regional economic growth, workforce opportunities, and any community benefit plan adopted by parish governments.

B. Ensure a process to incorporate stakeholder input from businesses, industry associations, and local communities, ensuring transparency and broad engagement.

C. Collaborate with other agencies, including but not limited to, Louisiana Department of Environmental Quality ("DEQ"), Louisiana Department of Revenue ("LDR"), and Louisiana Department of Wildlife and Fisheries ("LDWF"), to balance robust industrial development with rigorous environmental and safety protections.

D. Ensure a process where the applicant recommends strategies to prevent and mitigate long-term unintended consequences while fostering innovation and investment in CO_2 capture technologies so that projects not only offer broad economic benefits but also ensure diligent environmental and safety protections.

WHEREAS, in accordance with LAC 43:XVII.3615 promulgated by the Department, each Class VI applicant must conduct an area of review analysis and address any wells that could affect containment integrity, in addition to other critical site characterization and review steps;

WHEREAS, the Department has promulgated requirements for Class VI injection wells, including but not limited to plugging and abandonment (LAC 43:XVII.3631), pre-operational reviews (LAC 43:XVII.3619), emergency and remedial response (LAC 43:XVII.3623), financial assurance (LAC 43:XVII.3609), and public notification (LAC 43:XVII.3611) to ensure exhaustive analysis before granting a permit to operate;

WHEREAS, Department Guidance No. B-2025-01 and No. B-2025-01-A establish agency expectations for Class VI permit application review, including a standard two-year processing timeframe, structured technical review and public hearing stages, prioritization of projects with economic development significance, and alignment with federal EPA standards to ensure transparency and protection of underground sources of drinking water;

WHEREAS, in order to create further transparency for the citizens of our state, the Louisiana Legislature passed Senate Bill 244 of the 2025 Regular Session, Act 458, changing the

process that will be followed any time an applicant claims portions of records are confidential business information and exempt from production under the Public Records Law;

WHEREAS, local government and citizens, through their local government, have a right to be heard to ensure safety, transparency, and local input;

WHEREAS, Act Nos. 407 and 414 of the 2025 Regular Session require the Department to give substantial consideration to oral or written comments submitted by local governments in any matter requiring public comment or a public hearing;

NOW THEREFORE, I, JEFF LANDRY, Governor of the State of Louisiana, by virtue of the authority vested by the Constitution and laws of the State of Louisiana, do hereby order and direct as follows:

Section 1: Moratorium

I hereby direct the Department to suspend review of any new Class VI applications to construct that are submitted to it after the effective date of this order, unless directed otherwise.

Section 2: Concentration on Specific Class VI permits

Due to the Department's volume of applications received, over the next forty-five days, the Department is ordered to reevaluate the status of applications for assessment and prioritization for the Class VI permits listed in Section III. of Department Guidance No. B-2025-01.

For those Class VI applications to construct received prior to the effective date of this order, no other permit application shall be prioritized until there has been compliance with Sections 4 and 6-10 herein.

Section 3: Applicability and Purpose

The purpose of this Order is to provide a clear roadmap for citizens and local officials, ensuring that applications for proposed Class VI projects comply with existing Louisiana rules for carbon injection (LAC 43:XVII, Subpart 6 – Statewide Order 29-N-6) and carbon dioxide pipelines (LAC 33:V Hazardous Wastes and Hazardous Materials), including any forthcoming changes to pipeline safety regulations by PHMSA, and all relevant federal and state environmental laws.

Section 4: Permit Issuance Requirements

The Department shall not issue any Class VI permit to inject or operate a CO_2 injection well until the applicant has satisfactorily demonstrated compliance with rules, regulations, and

orders issued by the Department, including, but not limited to rules, regulations, and orders addressing the following:

A. Gathering necessary pre-application data in order to complete the required application components;

B. Application requirements found in LAC 43:XVII.3607, which include among other things: maps of the area of review showing ownership, topographical information, existing wells, surface bodies of water, roads, and habitable structures; comprehensive site characterization plan showing underground sources of drinking water, confining layer(s), geologic and geochemical data, minerology, and other pertinent data; proposed operating data and well operations plan with well controls and safeguards; determination of appropriate area of review ("AOR"); corrective action plan for addressing any deficient wells within the AOR; environmental analysis; proposed well design and construction plan including materials analysis; data collection and monitoring plan; proposed emergency response plan; post-injection monitoring plan; plug and abandonment plan; financial security and assurance to cover the costs of emergency response, post injection monitoring, and plugging, abandonment and restoration requirements;

C. Compliance with the State and Local Coastal Resources Management Act requirements (if the proposed project is located within the coastal zone);

D. Emergency Operations Plan;

E. Well Control procedures;

F. Identification and mitigation of any existing well, formerly plugged, abandoned, or otherwise; ensuring that all wells are properly plugged and abandoned or otherwise properly addressed with materials resistant to corrosion by CO2 potentially posing a risk consistent with LAC 43:XVII.3615;

G. Materials analysis ensuring that well casing for Class V monitor wells, Class VI injection wells, all prior, current, and future artificial penetrations within the AOR, including pipeline materials are fit for CO_2 service;

H. Construction Plan that meets all Class VI well design standards (LAC 43:XVII.3617);

I. Data Collection and Monitoring;

i. Receive approval of a Testing and Monitoring Plan in accordance with LAC 43:XVII.3625) to set forth monitoring requirements so as to protect USDWs and to use continuous recording devices to monitor injection pressure, rates, and volumes;

ii. Receive approval of a plan to delineate Area AOR and of a Corrective Action plan in accordance with LAC 43:XVII.3615, including a well-by-well plan for corrective action when required;

iii. Acquire 3D seismic or other acceptable forms of geophysical data to identify any faults or fractures;

iv. Conduct geologic data and analysis establishing adequate confining layers and injection zones;

J. Plume Modeling analysis (including pressure front) to demonstrate that all zones outside the approved injection and confining zones (including the USDWs) are protected;

K. Comprehensive Site Characterization describing geologic structures, geochemistry, and any risk factors pertinent to long-term CO_2 containment;

L. Submit a Plugging and Abandonment Plan that meets or exceeds the requirements of LAC 43:XVII.3631;

M. Demonstrate adequate Financial Responsibility in accordance with LAC 43:XVII.3609;

N. Minimum Financial Assurance Amount – Companies must maintain financial assurance to cover state-approved cost estimates for well closure, post-closure care, and emergency response. (LAC 43:XVII.3609.C);

O. Coverage Requirements – Financial assurance must specifically cover corrective action, well plugging, post-injection site monitoring and closure, address any endangerment of underground sources of drinking water, and emergency and remedial response actions (LAC 43:XVII.3615, 3623, 3631, and 3633);

P. Allowed Financial Instruments – Permitted instruments include surety bonds, letters of credit, third-party insurance, and trust accounts; Self-insurance or basic operator-held escrow accounts are strictly prohibited (LAC 43:XVII.3609.C);

Q. Annual Adjustments (Indexing and Cost-estimate Updates) – Financial assurance amounts are reviewed and updated yearly to match inflation and any changes in cost estimates (LAC 43:XVII.3609.C.);

R. Availability of Funds (Readiness) – Financial assurance must remain available until official state approval of well closure and post-closure care completion. Financial tools cannot be easily canceled, even if the company faces financial difficulties (LAC 43:XVII.3609.C);

S. Survey Plats identifying location and layout details of the proposed well and associated pipelines;

Section 5: Pipeline Safety Integration

For pipelines transporting CO_2 to or from Class VI wells, all operators shall adhere to the existing requirements found at LAC 33:V (Hazardous Wastes and Hazardous Materials) and any forthcoming federal CO_2 pipeline safety standards currently under PHMSA rulemaking (PHMSA–2022–0125). Where any provision has been delayed at the federal level but is consistent with LAC 33:V (Hazardous Wastes and Hazardous Materials) and Statewide Order 29–N-6, the Department shall require equivalent protective measures, including remote or automatic shut-off valves, robust emergency planning, and corrosion-control protocols.

The Department shall continue to monitor any updates to PHMSA rules and incorporate these updated federal standards into its requirements (LAC 33:V.Subpart 3) as warranted to protect public safety and environmental quality.

Section 6: Public Engagement Rules

Public Engagement recommendations will be considered as set forth in Department Guidance No. B-2025-01-A.

Section 7: Landowner Rights and Comments

It is the policy of the State of Louisiana that the requirements set forth in Act Nos. 407 and 414 of the 2025 Regular Session, codified in R.S. 30:1104, *et seq.*, shall serve as Louisiana's Landowner Bill of Rights for Geologic Sequestration Projects, and local governments shall be given due consideration in their comments, and that these protections shall help to guide all permitting, orders, authorizations, certificates of public necessity and convenience, unitization, negotiation undertaken pursuant to the Louisiana Geologic Sequestration of Carbon Dioxide Act.

The Department shall document, in writing, all relevant local government concerns received and demonstrate how these comments were taken into account in the permitting decision.

Section 8: Coordination on Other Regulatory Requirements

The Department shall ensure that Class VI projects address other applicable regulatory requirements under its purview and coordinate with other regulatory agencies to ensure that Class VI projects are addressing applicable requirements, including:

A. Compliance with the State and Local Coastal Resources Management Act requirements (if the proposed project is located within the coastal zone);
B. Analysis of Threatened and Endangered Species (in coordination with U.S. Fish and Wildlife Service);
C. Compliance with all relevant U.S. Army Corps of Engineers rules and regulations, including wetlands and waterbody impact review;
D. Compliance with requirements delegated to the DEQ, where applicable;
E. Compliance with State and federal Fish and Wildlife Conservation Acts to protect ecosystem health;
F. Preservation of Louisiana's Historic Items, if discovered, pursuant to the State Historic Preservation Office rules;

Section 9: Coordination with Department of Economic Development

For proposed projects applying for Class VI permits with potential for significant economic impact, LED shall be consulted to ensure that project benefits to the local economy are maximized without compromising public health, safety, or environmental standards. LED's economic impact figures shall be the figures the Department uses in its analysis.

Section 10: Public Transparency and Access to Information

The Department shall provide public access via its website to all draft permits, project summaries, and final approved permits, consistent with LAC 43:XVII.3611.

Where applicable, the Secretary may hold public meetings or hearings to address local concerns, consistent with LAC 43:XVII.3611 and the relevant requirements for notice and comment.

Section 11: Enforcement and Severability

This Order shall be enforced by the Department, in coordination with the Louisiana State Police, DEQ, and other authorities, if necessary.

If any provision of this Order, or the application thereof, is held to be invalid, such invalidity shall not affect other provisions or applications of this Order, which can be given effect without the invalid provision or application; the provisions of this Order are severable.

Section 12: Effective Date

This Order is effective upon signature and shall remain in effect unless amended, modified, rescinded, or terminated by further Executive Order. All state agencies, offices, boards, and commissions are hereby directed to comply with the provisions of this Order.

IN WITNESS WHEREOF, I have set my hand officially and caused to be affixed the Great Seal of Louisiana in the City of Baton Rouge, on this 15th day of October, 2025.

Jeff Landry
GOVERNOR OF LOUISIANA

ATTEST BY THE SECRETARY OF STATE

Nancy Landry
SECRETARY OF STATE

State of Louisiana

EXECUTIVE DEPARTMENT
OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER JML 25-120

STATE OF EMERGENCY
MAXIMUM SECURITY CAMP J REPAIRS AND OPERATION
LOUISIANA STATE PENITENTIARY

WHEREAS, the Governor is responsible for meeting the dangers to the state and people presented by emergencies and disasters;

WHEREAS, the Louisiana Homeland Security and Emergency Assistance and Disaster Act, La. R.S. 29:721, *et seq.*, confers upon the Governor of the State of Louisiana emergency powers to address disasters resulting from natural or man-made events that cause or threaten loss of life, injury, or property damage, as well as emergencies, which include actual or potential conditions created by such disasters, in order to ensure that preparations of this State will be adequate to deal with such emergencies or disasters and to preserve the lives and property of the people of the State of Louisiana;

WHEREAS, when the Governor determines that a disaster or emergency has occurred, or the threat thereof is imminent, La. R.S. 29:724(B)(l) empowers him to declare a state of emergency or disaster by executive order, which has the force and effect of law;

WHEREAS, La. R.S. 29:724 authorizes the Governor during a declared state of emergency to suspend the provisions of any state regulatory statute prescribing procedures for conducting state business, or the orders, rules, or regulations of any state agency, if strict compliance with the provision of any statute, order, rule, or regulation would in any way prevent, hinder, or delay necessary action in coping with the emergency;

WHEREAS, a declaration of emergency or disaster activates the state's emergency response and recovery program under the command of the director of the Governor's Office of Homeland Security and Emergency Preparedness ("GOHSEP");

WHEREAS, La. R.S. 29:274(D)(2) permits the Governor during a declared state of emergency the capacity to utilize all available resources of the state government and of each political subdivision of the state as reasonably necessary to cope with the disaster or emergency;

WHEREAS, La. R.S. 29:274(D)(3) authorizes the Governor during a declared state of emergency the capability to transfer the direction, personnel, or functions of state departments and agencies or units thereof for the purpose of performing or facilitating emergency services;

WHEREAS, La. R.S. 29:274(D)(4) gives the Governor during a declared state of emergency the ability to make provisions for the availability and use of temporary emergency housing;

WHEREAS, the Louisiana State Penitentiary lacks adequate bed capacity to accommodate violent offenders who require the highest degree of security and will be transferred to its facilities;

WHEREAS, Camp J, within the Louisiana State Penitentiary, was designed to provide that maximum security, but Camp J has deteriorated into a condition that creates a significant threat of injury to individuals and property who enter or are in and around its premises;

WHEREAS, in the first seven months of 2017, dozens of weapons were found at Camp J due to security malfunctions;

WHEREAS, within just one year, approximately 85 corrections officers assigned to Camp J had resigned, retired, or were terminated due to the complex challenges presented there;

WHEREAS, locks for the cells in Camp J malfunctioned, allowing offenders to jam cell doors and circumvent security checks, which resulted in a decision to close Camp J in 2018;

WHEREAS, the security conditions of Camp J present a threat of injury and a threat to the lives of offenders housed or working within Camp J as well as employees, contractors, or members of the public who may be within Camp J at any time;

WHEREAS, Camp J and the surrounding infrastructure requires facility improvements and maintenance to adequately hold any violent offenders and to protect the lives of any employees, contractors, or members of the public who may be within Camp J at any time;

NOW THEREFORE, I, JEFF LANDRY, Governor of the State of Louisiana, by virtue of the authority vested by the Constitution and laws of the State of Louisiana, order and direct as follows:

Section 1: Pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, *et seq.*, a state of emergency is hereby declared to exist that currently threatens the lives, safety, and property of the citizens in Louisiana.

Section 2: Pursuant to R.S. 29:724(A)(3), the designated emergency area, which is or may be affected, shall include Camp J and surrounding infrastructure, within the Louisiana State Penitentiary.

Section 3: The Director of the Governor's Office of Homeland Security and Emergency Preparedness (GOHSEP) and the Secretary of the Department of Public Safety and Corrections are hereby authorized to undertake any activity authorized by law that they deem appropriate in response to this declaration.

Section 4: Pursuant to R.S. 29:724(D)(l), the Louisiana Procurement Code (R.S. 39:1551, *et seq.*) and Louisiana Public Bid Law (R.S. 38:2211, *et seq.*) and their corresponding rules and regulations are hereby suspended for the purpose of the procurement of any good or services necessary to respond to this emergency, including emergency contracts, cooperative endeavor agreements, any other emergency amendments to existing contracts, or any public work necessary to respond to this emergency.

Section 5: All departments, commissions, boards, agencies and officers of the State, or any political subdivision thereof, are authorized and directed to cooperate in actions the State may take in response to this event.

Section 6: This Order is effective upon signature and shall remain in effect from Wednesday, October 22, 2025, until Friday, November 21, 2025, unless amended, modified, terminated, or rescinded earlier by the Governor, or terminated by operation of law.

IN WITNESS WHEREOF, I have set my hand officially and caused to be affixed the Great Seal of Louisiana in the City of Baton Rouge, on this 22nd day of October 2025.

JEFF LANDRY
GOVERNOR OF LOUISIANA

ATTEST BY THE
SECRETARY OF STATE

Nancy Landry
SECRETARY OF STATE

State of Louisiana

EXECUTIVE DEPARTMENT
OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER JML 25-121

RENEWAL OF STATE OF EMERGENCY – HURRICANE IDA

WHEREAS, the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, et seq., confers upon the Governor of the State of Louisiana emergency powers to deal with emergencies and disasters, including those caused by fire, flood, earthquake, or other natural or manmade causes, in order to ensure that preparations of this state will be adequate to deal with such emergencies or disasters and to preserve the lives and property of the people of the State of Louisiana;

WHEREAS, pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, *et seq.*, Governor John Bel Edwards declared a state of emergency in response to the imminent threat posed by Hurricane Ida on August 26, 2021, in Proclamation Number 165 JBE 2021;

WHEREAS, Proclamation Number 165 JBE 2021 has been renewed and extended every thirty (30) days through JML 25-107, which is in effect through Sunday, October 26, 2025;

WHEREAS, Hurricane Ida made landfall on the Louisiana coast as a major hurricane on Sunday, August 29, 2021, bringing devastating winds, widespread power-outages, and severe damage to Louisiana and its citizens.

WHEREAS, on August 27, 2021, President Joseph R. Biden approved an Emergency Declaration for the State of Louisiana, authorizing appropriate assistance under Title V of the Stafford Act, to be coordinated by the United States Department of Homeland Security and the Federal Emergency Management Agency;

WHEREAS, on August 29, 2021, President Biden approved a Major Disaster Declaration for the State of Louisiana, authorizing individual and public assistance for all impacted parishes;

WHEREAS, R.S. 29:724 authorizes the governor during a declared state of emergency to suspend the provisions of any state regulatory statute prescribing procedures for conducting

state business, or the orders, rules or regulations of any state agency, if strict compliance with the provision of any statute, order, rule, or regulation would in any way prevent, hinder, or delay necessary action in coping with the emergency;

WHEREAS, damage from this storm continues to pose a threat to citizens and communities across the Gulf Coast and create conditions that place lives and property in the state in jeopardy;

NOW THEREFORE, I, JEFF LANDRY, Governor of the State of Louisiana, by virtue of the authority vested by the Constitution and the laws of the State of Louisiana, do hereby order and direct as follows:

Section 1: Pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, *et seq.,* a state of emergency is hereby declared to continue to exist statewide in the State of Louisiana as a result of the threat of emergency conditions that threaten the lives and property of the citizens of the State.

Section 2: The Director of the Governor's Office of Homeland Security and Emergency Preparedness (GOHSEP) is hereby authorized to continue to undertake any activity authorized by law that he deems appropriate in response to this declaration.

Section 3: Pursuant to R.S. 29:732, during a declared state of emergency, the prices charged or value received for goods and services sold within the designated emergency area may not exceed the prices ordinarily charged for comparable goods and services in the same market area at or immediately before the time of the state of emergency, unless the price by the seller is attributable to fluctuations in applicable commodity markets, fluctuations in applicable regional or national market trends, or to reasonable expenses and charges and attendant business risk incurred in procuring or selling the goods or services during the state of emergency.

Section 4: Pursuant to R.S. 29:724(D)(1), the Louisiana Procurement Code (R.S. 39:1551, *et seq.*) and Louisiana Public Bid Law (R.S. 38:2211, *et seq.*) and their corresponding rules and regulations continue to be suspended for the purpose of the procurement of any goods or services necessary to respond to this emergency, including emergency contracts, cooperative endeavor agreements, and any other emergency amendments to existing contracts.

Section 5: Pursuant to R.S. 29:724(D)(1), the provisions of R.S. 39:126 regarding prior approval of change orders continue to be suspended.

Section 6: All departments, commissions, boards, agencies and officers of the State, or any political subdivision thereof, are authorized and directed to cooperate in actions the State may take in response to the effects of this severe weather event.

Section 7: This Order is effective upon signature and shall continue in effect from Friday, October 24, 2025 to Sunday, November 23, 2025, unless amended, modified, or terminated sooner.

IN WITNESS WHEREOF, I have set my hand officially and caused to be affixed the Great Seal of Louisiana in the City of Baton Rouge, on this 24th day of October, 2025.

EXECUTIVE ORDER NUMBER JML 25-122

RENEWAL OF STATE OF EMERGENCY - THREAT OF SUBSIDENCE, SUBSURFACE INSTABILITY, AND PRESENCE OF HYDROCARBONS IN SULPHUR MINES SALT DOME AREA

WHEREAS, pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721, et seq., a state of emergency was declared through Proclamation Number 160 JBE 2023;

WHEREAS, Proclamation Number 160 JBE 2023 has been renewed and extended every thirty (30) days through JML 25-108 which is in effect through Sunday, October 26, 2025;

WHEREAS, when the Governor determines that a disaster or emergency has occurred, or the threat thereof is imminent, R.S. 29:724(B)(1) empowers the Governor to declare a state of emergency by executive order or proclamation, or both;

WHEREAS, local, state, and federal agencies began monitoring subsurface seismic activity occurring in the vicinity of the Sulphur Mines salt dome in Calcasieu Parish in December of 2021, with a true seismic monitoring array being ordered by the Office of Conservation, which came online in January of 2023;

WHEREAS, the Office of Conservation began investigating unexplained hydrocarbon bubbling within the area of concern in January of 2023, as well as monitoring seismicity, and the rate of subsidence in the area of concern;

WHEREAS, on Wednesday September 20, 2023, in response to this subsidence and seepage, Commissioner of Conservation, Monique M. Edwards made a declaration of emergency under the authority of Louisiana Revised Statutes 30:1 *et seq.*, ordering the operator of the salt cavern underneath the area of subsidence to undertake all necessary activities to evaluate and abate any deterioration of the cavern's integrity;

WHEREAS, the State anticipates that further assistance may be needed to assist Calcasieu Parish in their response to this continuing threat; and

WHEREAS, it is necessary to continue the measures provided in Proclamation Number 160 JBE 2023 to further protect the health and safety of the citizens of Louisiana;

NOW THEREFORE I, JEFF LANDRY, Governor of the State of Louisiana, by virtue of the authority vested by the Constitution and laws of the State of Louisiana, do hereby order and direct as follows:

Section 1: Pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, R.S. 29:721 *et seq.*, a state of emergency is hereby declared to exist in the Parish of Calcasieu, as a result of seismic activity, lost cavern integrity, increased hydrocarbon bubbling, and accelerated subsidence, that collectively indicate a potential for structural failure that could potentially threaten the lives and property of the citizens of the State.

Section 2: The Director of the Governor's Office of Homeland Security and Emergency Preparedness is hereby authorized to undertake any activity authorized by law which he deems appropriate in response to this declaration.

Section 3: All departments, commissions, boards, agencies, and officers of the State or any political subdivision thereof, are authorized and directed to cooperate in actions, the State may take in response to this incident.

Section 4: This Order is effective upon signature and shall continue in effect from Friday, October 24, 2025, through Sunday, November 23, 2025, to, unless amended, modified, or terminated sooner.

IN WITNESS WHEREOF, I have set my hand officially and caused to be affixed the Great Seal of Louisiana in the City of Baton Rouge, on this 24th day of October, 2025.

EXECUTIVE DEPARTMENT
OFFICE OF THE GOVERNOR
EXECUTIVE ORDER NUMBER JML 25-123

STATE OF EMERGENCY
SCHUMER SHUTDOWN
CREATES FOOD INSECURITY

WHEREAS, the Governor is responsible for meeting the dangers to the state and people presented by emergencies and disasters;

WHEREAS, the Louisiana Homeland Security and Emergency Assistance and Disaster Act, La. R.S. 29:721, *et seq.*, confers upon the Governor of the State of Louisiana emergency powers to address disasters resulting from natural or man-made events that cause or threaten loss of life, injury, or property damage, as well as emergencies, which include actual or potential conditions created by such disasters;

WHEREAS, when the Governor determines that a disaster or emergency has occurred, or the threat thereof is imminent, La. R.S. 29:724 (B)(l) empowers him to declare a state of emergency or disaster by executive order which has the force and effect of law;

WHEREAS, the Democratic Party's failure, under U.S. Senate Democrat Leader Chuck Schumer, to reach a federal funding agreement has resulted in a shutdown of the United States Government as of October 1, 2025;

WHEREAS, the ongoing federal government shutdown has resulted in a lapse of federal funding for numerous programs administered by the U.S. Department of Agriculture ("USDA");

WHEREAS, on October 10, 2025, the USDA directed States to hold November SNAP benefits as the USDA would be delaying transmission to State EBT vendors due to the Schumer Shutdown;

WHEREAS, any interruption in SNAP benefits will significantly increase food insecurity among Louisiana's most vulnerable populations, including the elderly, children, and individuals with disabilities;

WHEREAS, as of October 2025, an estimated 792,769 Louisianians rely on SNAP benefits to meet their basic nutritional needs;

WHEREAS, over 120,000 of SNAP recipients in Louisiana are disabled;

WHEREAS, approximately 356,825 Louisiana children live in households that receive SNAP assistance;

WHEREAS, an estimated 88,208 elderly residents of Louisiana depend on SNAP benefits for essential food support;

WHEREAS, Congressional Republicans, under the leadership of Speaker Mike Johnson of Louisiana, voted to fund the federal government and our U.S. Senators representing Louisiana have repeatedly done the same to ensure federal employees are paid, federal services continue, and funding for programs like the Supplemental Nutrition Assistance Program ("SNAP") is provided, at the same time Washington, D.C. Democrats in large part have voted over and over again to keep the federal government closed; the Revenue Stabilization Fund is intended to be available for appropriation to deal with emergency situations;

WHEREAS, the legislative leadership and I share a deep concern for Louisiana's elderly, disabled, and children in light of the potential shortage of SNAP benefits created by the Schumer Shutdown;

WHEREAS, this Executive Order declares and recognizes that an emergency situation exists in the State of Louisiana;

WHEREAS, Louisiana Constitution Article 7, Section 10.5 allows the Legislature to authorize an appropriation from the Revenue Stabilization Fund at any time for any purpose with the consent of two-thirds of the elected members of each house of the legislature, even while out of session in writing;

WHEREAS, the Legislature is currently convened in a special legislative session and can easily arrange a vote to consent and authorize such an appropriation to support our most vulnerable citizens;

NOW THEREFORE, I, JEFF LANDRY, Governor of the State of Louisiana, by virtue of the authority vested by the Constitution and laws of the State of Louisiana, order and direct as follows:

Section 1: Pursuant to the Louisiana Homeland Security and Emergency Assistance and Disaster Act, La. R.S. 29:721, *et seq.*, a state of emergency is hereby declared to exist as a result of the emergency conditions that currently threaten the people of Louisiana.

Section 2: Pursuant to La. R.S. 29:724 (A)(3), the designated emergency area is the State of Louisiana.

Section 3: This emergency declaration shall be transmitted to the Speaker of the Louisiana House of Representatives and the President of the Louisiana Senate;

Section 4: Pursuant to La. R.S. 29:732, during a declared state of emergency, the prices charged or value received for goods and services sold within the designated emergency area may not exceed the prices ordinarily charged for comparable goods and services in the same market area at or immediately before the time of the state of emergency, unless the price by the seller is attributable to fluctuations in applicable commodity markets, fluctuations in applicable regional or national market trends, or to reasonable expenses and charges and attendant business risk incurred in procuring or selling the goods or services during the state of emergency.

Section 5: All departments, commissions, boards, agencies and officers of the State, or any political subdivision thereof, are authorized and directed to cooperate in actions the State may take in response to this disaster.

Section 6: This Order is effective upon signature and shall continue in effect from Friday, October 24, 2025, through Tuesday, November 4, 2025, unless amended, modified, terminated, or rescinded earlier by the Governor, or terminated by operation of law.

IN WITNESS WHEREOF, I have set my hand officially and caused to be affixed the Great Seal of Louisiana in the City of Baton Rouge, on this 24th day of October 2025.

Sec. Davidson,
Attached is the notification whereby, in response to agency guidance regarding permitting streamlining, ExxonMobil is withdrawing its pending Draco permit application.

As you know, the potential Draco project has been a key component to future investment opportunities. Our two remaining Class VI permits in that region (Allen Parish) are priorities for future investments as well.

Our work on **community engagement in Allen Parish** continues to progress. This week, we hosted 33 Allen Parish first responders, including 3 fire chiefs and a police chief, and provided education on **our no-cost responder training** program. We've also launched a **community engagement panel** with broad representation from local business, education, and civic leaders, and are hosting a **community resource fair** next week, which focuses on small business growth, workforce development, and economic opportunity.

We look forward to meeting with LC&E and LED to share more information on current and future commercial contracts and projects, especially as they relate to pipeline infrastructure and future permitting.
Sincerely
Stephanie

RE: Class VI Permit Application Withdrawal
Draco – Allen, Vernon, Beauregard Parishes

Dear Mr. Secretary,

In light of recent Department Guidance Nos. B-2025-01, B-2025-01-A, and Executive Order JM 25-119, ExxonMobil Low Carbon Solutions Onshore Storage, LLC respectfully submits this letter to formally withdraw the following Class VI permit application currently under review by your agency:

- Draco – Application Nos. 45069 – 45074

We recognize the significant effort and resources your staff dedicates to the review and processing of Class VI permit applications and as such, we believe that withdrawing this application is the most responsible course of action to facilitate the agency's most advantageous use of its resources and staff time.

ExxonMobil has dedicated significant resources in Louisiana and is committed to advancing Carbon Storage projects across the state, as evidenced by our seven appraisal wells that we have either drilled or are in the process of drilling. We appreciate the agency's continued professionalism and collaboration, and we look forward to engaging the Louisiana Department of Conservation and Energy on our current and future projects.

Should you require any additional information regarding this request, please contact Cody Todd (cody.todd@exxonmobil.com).

Best Regards,

Kyle and Stephen,

Today, Secretary Wright signed an amendment order authorizing additional time for exports of liquefied natural gas (LNG) to commence the Woodside Louisiana LNG project under construction in Calcasieu Parish, Louisiana. The order authorizes Woodside Energy's Louisiana LNG project until December 31, 2029 to commence LNG exports to non-free trade agreement countries. Once fully constructed, the Woodside Louisiana LNG Project will be capable of exporting up to 3.88 billion cubic feet per day (Bcf/d) of natural gas as LNG.

Press Release below:

Energy Department Grants Woodside Louisiana LNG Project Additional Time to Commence Exports

WASHINGTON – U.S. Secretary of Energy Chris Wright today signed an amendment order granting an additional 44 months for Woodside Energy to commence exports of liquefied natural gas (LNG) to non-free trade agreement (non-FTA) countries from the Woodside Louisiana LNG Project under construction in Calcasieu Parish, LA. Once fully constructed, the project will be capable of exporting up to 3.88 billion cubic feet per day (Bcf/d) of natural gas as LNG.

Woodside Louisiana took final investment decision on its first phase earlier this year and has off-take agreements with Germany's Uniper as well as U.S. pipeline operator Williams who will be marketing natural gas through the Woodside Louisiana LNG project.

"It is exciting to take this action to provide the needed runway for this project to fully take off and realize its potential in providing reliable and secure energy to the world," said **Kyle Haustveit, Assistant Secretary of the Office of Hydrocarbons and Geothermal Energy**. "Thanks to President Trump's leadership, the Department of Energy is redefining what it means to unleash American energy to strengthen energy reliability and affordability for American families, businesses, and our allies."

The United States is the largest global producer and exporter of natural gas. There are currently eight large-scale LNG projects operating in the United States and several additional projects are expanding or under construction. Under President Trump's leadership, the Department has approved applications from projects authorized to export more than 17.7 Bcf/d of natural gas as LNG, an increase of approximately 25% from 2024 levels. So far in 2025, over 8 Bcf/d of U.S. LNG export capacity, including from Woodside Louisiana LNG, has reached a final investment decision and gone under construction.

Hi Kyle,

We sat next to each other at the RGA event in New Orleans last year. I believe I spoke to you then about my company's expansion plans into your state. It took more time than I would have preferred, but we're slated to kick off our first project in Louisiana starting in January to support Commonwealth LNG's export terminal build.

However, although I registered with the SOS long ago, I did not realize until yesterday that it's also required that I have a contractor's license. My application is buried in a stack of renewals and the LSLBC told me it likely wouldn't even begin to be processed until after the holidays.

I have over 15 local subcontractors lined up to break ground in January during what is seasonally a slow time of year for small businesses in oil & gas. Do you have any suggestions of how I can expedite this process or someone I can talk to about the urgency of the matter? Thank you for your consideration, sir.

Best,
Luke
