Stephen and Justin,
Thank you for taking the time to meet with us yesterday. We briefly discussed permitting processes. I want to discuss some of our experiences with the permitting processes with you in more detail, specifically with our Jeff Davis Electric Project and how US Fish is blocking those permits. The governor would be interested in this because the 230 kv loop they are trying to build would benefit the LNG industry in Cameron Parish. Please let me know if we can set up a follow-up discussion. Thank you.

One family, one voice…powering Louisiana,

We do have a Class VI Carbon Sequestration information page - https://www.dnr.louisiana.gov/index.cfm/page/1693 - you can direct them to. We are currently making use of the questions/feedback we are also getting from the public in that area to better tailor an FAQ section for that page.

You could also just give them my contact information to field specific questions on regulations and status of proposed projects or whatever other concerns they may have. A lot of this can get real technical and area-specific in a hurry, so it might be best just to steer them straight over here.

Patrick,

We're seeing an uptick in complaints from residents about carbon capture projects in the Southwest. Does the Department have any resources or talking points that our staff can direct toward these concerned citizens?

Your Parish of Residence	Vernon
Share Your Opinion About an Issue	Other
Get Help with a Problem	Other
Your Comment	Subject: Urgent Concerns of Vernon, Beauregard, and Surrounding Parishes Regarding CO2 Storage Project Dear Governor Jeff Landry, I hope this message finds you well. I am writing to you as a deeply concerned resident of Vernon Parish, on behalf of the people of Vernon, Beauregard, and other surrounding parishes. We are facing a critical issue with the proposed CO2 storage project, and we urgently seek your leadership in addressing our concerns and standing up for the rights of our communities. We recently learned that this project, set to make Vernon Parish the largest CO2 storage experiment in the United States, poses severe risks to our environment, property, and way of life. This project was advanced without meaningful input from the residents who will be most affected, and we feel deeply betrayed by the manner in which this was

handled **Key concerns include ** 1 **Lack of Human Impact Studies** There have been no human impact studies conducted to assess the long term effects of CO2 storage on the health and safety of our communities We, the residents, are essentially being treated as the subjects of this experiment, with no assurances of our safety 2 **Potential for Environmental Damage** Vernon Parish has one of the most pristine water aquifers in the state The risk of contamination from CO2 injection is unacceptably high This aquifer is a vital resource for our communities, and any damage to it would be irreversible 3 **Destabilization and Earthquake Risk** Experts have indicated that this project could destabilize the land, increasing the risk of earthquakes The notion that our land could "return to normal" after twenty years is unacceptable Our homes, farms, and livelihoods cannot be collateral damage for a project driven by corporate interests 4 **Sneaky Tactics and Lack of Transparency** We recently learned that geological studies began two years ago in the Simpson area without public knowledge These studies were conducted with permission from private landholders like Roy O Martin, yet the broader public was kept in the dark Such sneaky tactics undermine our trust in government and corporate accountability 5 **Violation of Property Rights and Use of Eminent Domain** The use of eminent domain for this project is a direct violation of the rights of the people The idea that private land can be seized for a project that will primarily benefit large corporations is unconscionable We demand the repeal of any law that allows for this, and we urge you to pass legislation that explicitly bans the use of eminent domain for projects like this, which serve corporate rather than public interests 6 **John Bel Edwards' Involvement** Former Governor John Bel Edwards played a significant role in pushing this project forward, and it is deeply concerning that he now stands to profit as a lobbyist for this very industry This is a clear conflict of interest and represents a betrayal of the people he once served It is not too late for you to correct this course and protect the interests of the people over corporate profits **Our demands are simple but urgent ** **Immediate halt to the CO2 storage project** until comprehensive human impact studies and environmental assessments are conducted and made public **Legislation that bans the use of eminent domain** for private, profit driven projects like this CO2 storage initiative A thorough investigation into how this project was approved without the proper transparency and public input Governor Landry, we look to you for leadership in this critical time The residents of Vernon Parish, Beauregard Parish, and our neighboring communities deserve better than to be cast aside in favor of corporate profits Our voices must be heard, and our rights must be respected We urge you to take swift and decisive action to protect our land, our water, and our future We stand ready to work with you and your administration to find solutions that truly serve the public interest, and we hope you will reject this harmful project in favor of safeguarding the well being of the people of Louisiana Thank you for your attention to this urgent matter We await your response and your plan of action Sincerely, Joshua Shirley

Olivia,

My apologies for not getting this to you yesterday as I intended. Here is a list of proposed questions for the Governor for next Tuesday's fireside chat.

Please let me know if you have any concerns or suggested edits.

Obviously, I may ask follow-up questions if they help the flow of the conversation or to fill time, however this should cover the general discussion topics.

Thanks for your help,
Jason

Proposed Questions for Governor Jeff Landry

Americas LNG Summit, October 21st, 2025

General Growth of Industry:

Governor, let's look at the last decade and a half for the LNG industry in Louisiana. In 2010, Louisiana was home to multiple LNG IMPORT facilities. Today, not only do we not import any longer, Louisiana is exporting 61% of America's LNG production and the nation is by far the largest global exporter. We know that Louisiana has deepwater access, natural gas, and a robust pipeline system. But - so does Texas. In your view, what other factors have led to the concentration of the LNG industry in our state, and what has investment on this scale meant for Louisiana?

Balancing Environmental Concerns with Industry:

Governor, we all know that Louisiana is a sportsman's paradise. I don't know a single Louisianan who doesn't value the environment and the wonderful natural resources that the state has to offer. Louisiana is an also a global energy powerhouse - providing LNG, fuels and petrochemical projects to the world. Here in Southwest Louisiana over the past few years, we have seen the rise of a number of environmental activist organizations, funded by the Bloomberg Foundation and other outside groups, arguing we should stop exporting LNG and keep hydrocarbons in the ground. What are your thoughts? And how do you, as the state's leader, balance the Louisiana's environmental and economic develop concerns?

Carbon Sequestration:

Governor, last Wednesday you issued a moratorium on new Class VI well applications in Louisiana, the wells needed for carbon capture and sequestration. As you know, LNG producers are under substantial pressure from many counterparties - particularly in Europe - to demonstrate lower emissions for delivered cargoes. One of the main tools available to the LNG industry is carbon sequestration. As you also know, companies that are looking to invest $10-$20 billion in a project value regulatory certainty. Governor, can you explain the reasoning behind the CCS moratorium? And can you assure those in this room who may be considering LNG expansions or new plants in Louisiana that CCS will remain an option for their projects in Louisiana?

Incentives:

Governor, the Industrial Tax Exemption Program, is one of the tools that Louisiana has available to it to attract large scale manufacturing. What role have ITEP and other state incentives played in the state's LNG success? Are you happy with where the ITEP programs stands today? Are there additional tools or policies you may deploy to encourage additional development of LNG facilities - or for the growth of the companies that support them?

Business Supporting Initiatives:

Governor, last month you announced initiatives aimed at further improving the business climate in the state. I want to ask you about two of those initiatives today. First, you launched Project Lightning Speed, which is aimed at reducing government red tape and

Secretary Bourgeois - I hope your day and week are getting off a great start! I am reaching out to share information about a VERY positive development that occurred on Friday for my client Commonwealth LNG. Both DOE and FERC took action Friday in a manner that has Commonwealth LNG preparing for a September 2025 FID.

Commonwealth served on the landry transition team and, sadly, served as the poster-child for the Biden ban on LNG. We've been first in line to get fully permitted for years, and are now FINALLY well on our way after years of delay.

When convenient, I know the Commonwealth team would love to brief you on the specifics of the project (see attached). Later this week, we will be meeting with and briefing the Governor on the status of the project while in DC.

Please feel free to reach out or have any staff reach out anytime.

Commonwealth LNG Project – Economic Impact*

Timeline

Final Investment Decision ("FID")	Peak Construction Phase	First LNG
Q3-2025	*Q2-2028*	*Q1-2029*

2025 — **~4 Yr. Build** — **2029**

Aerial Rendition of Facility

Project Highlights

Facility Overview	▪ Construction and operation of the 9.5 Mtpa LNG export facility will involve an $11 billion capital investment, employing a highly skilled workforce utilizing world-class engineering and some of the highest-tech equipment in the industry. Throughout the life of the facility, we will be creating indirect job opportunities by utilizing local small businesses to service our plant. The project is expected to contribute ~$3.5 billion/year in U.S. export revenue.
Financial Sponsor	▪ Commonwealth LNG is supported by Kimmeridge Energy Management, an alternative asset manager focused on the energy sector, providing renowned energy market expertise, commercial relationships and capital, funding development and construction.
Job Impact	▪ Construction will include more than 2,000 American workers with an average of approximately 800 workers onsite daily for more than four years. The average annual wage will be approximately $73,500 – more than 31 percent above the area's median household income. Full-time operations for the life of the project require 270 high-paying, full-time jobs.
Local Participation	▪ Southwest Louisiana is home to a skilled workforce servicing the energy and chemicals industries. Commonwealth will prioritize opportunities for local residents living and working in this area.
Immediate Tax Revenue*	▪ Authorized in 2022, Commonwealth will begin paying property taxes effective upon completion of construction and start-up of the facility.
Significant Source of Local Funding*	▪ Property taxes over the first 10 years of operation projected to total approximately $380 million at current rates. During the following 10 years, the amount should exceed $1 billion, averaging more than $100 million per year.

*All data based on current estimates and best available information

LNG: Building a Stronger Local Economy

Skill Building

Commonwealth LNG continually seeks ways to positively impact the community and augment workforce development through meaningful partnerships and investments.

II

Educational excellence

Commonwealth's strategic educational investments create pathways for local students to develop leadership skills and access to higher education.

- Creating and funding a new "Explorer Program" with a $200,000 grant to Cameron Parish Schools
- Funded a $200,000 endowment for college tuition scholarships at McNeese State University

III

Workforce

Our educational investments target developing skills needed for the evolving energy sector, ensuring long-term economic benefits for the region.

- Funded a $200,000 endowment for college tuition scholarships at SOWELA Technical Community College

I

Healthcare access and wellness

Our investment in healthcare infrastructure demonstrates our commitment to build a more resilient healthcare system for the Cameron Parish community.

- Donating a $450,000 mobile healthcare unit to the Lower Cameron Hospital Service District and will advance funding for the South Cameron Memorial Hospital rebuild pending FEMA reimbursements

Economic Infusion

Commonwealth LNG's Cameron Parish export facility is expected to contribute to economic gains locally, regionally, and as part of the larger U.S. LNG industry.

I

A key contributor to the economy

- Commonwealth estimates that the total project construction payroll will be over $200 million or an average of over $6.5 million per month. A general assumption is that construction workforces spend 20 percent of their salary locally. Based on the Louisiana state sales tax rate of 4.45 percent (La. Dept. of Revenue), it's anticipated that over $2 million will accrue to the State of Louisiana from the project workforce over the construction period.

II

Aiding SWLA's contribution to the nation's balance of trade

- An Oct. 2024 report prepared by PwC for the National Association of Manufacturers credited the U.S. LNG industry with total tax and royalty contributions of $11 billion in 2023 alone. These include property taxes, income taxes, social insurance contributions, sales/use taxes, corporate income taxes, federal royalties, and others.

III

Reducing environmental costs

- U.S. exports of LNG lessen global reliance on coal as an energy source, reducing emissions to help meet global climate initiatives.
- Commonwealth's facility includes optionality to integrate 3rd-party advanced carbon capture sequestration.

FOR IMMEDIATE RELEASE

COMMONWEALTH LNG RECEIVES CONDITIONAL NON-FTA EXPORT AUTHORIZATION FROM DOE AND DRAFT SUPPLEMENTAL ENVIRONMENTAL IMPACT STATEMENT FROM FERC

Key regulatory milestones pave way for final investment decision in September 2025; first LNG production expected in Q1 2029

HOUSTON and NEW YORK Feb. 14, 2025 – Commonwealth LNG ("Commonwealth") today announced it has received a conditional non-free trade agreement (non-FTA) export authorization from the United States Department of Energy (DOE), and separately received its draft Supplemental Environmental Impact Statement (SEIS) from the Federal Energy Regulatory Commission (FERC). These actions represent significant milestones in Commonwealth's development of its 9.5 million tonnes per annum liquefied natural gas (LNG) facility in Cameron Parish, Louisiana.

"With these decisions in hand, subject to a FERC Final Order, which we expect in July 2025, and DOE final authorization, Commonwealth anticipates reaching a final investment decision in September 2025, with first LNG production expected in Q1 2029," said Commonwealth CEO Farhad Ahrabi. "Today's actions demonstrate that President Trump is prioritizing the American energy industry and we are both pleased and grateful to have achieved these important regulatory objectives."

Ben Dell, Managing Partner of Kimmeridge Energy Management and Chairman of Commonwealth, said: "Commonwealth welcomes the issuance of the draft SEIS by FERC and the Department of Energy's informed decision and shares the Trump Administration's vision for responsible energy diplomacy. These milestones advance our commitment to developing a state-of-the-art LNG export facility that will strengthen energy security for our allies, while prioritizing environmental stewardship and creating lasting value for local communities. The Commonwealth export facility is expected to unlock approximately $11 billion in investments in Louisiana and an estimated $3.5 billion in annual export revenue unleashing American energy, utilizing approximately 2,000 workers at the peak of construction and providing 270 high-paying jobs when the facility begins operations. We also look to pave the way for vital improvements to community healthcare, education and critical infrastructure."

Commonwealth is pioneering an integrated wellhead-to-water strategy in partnership with its upstream operating entity to deliver low cost, low-emission gas to the global market, which is seeking supply from trusted trading partners.

About Commonwealth LNG
Commonwealth LNG is a 9.5 mtpa liquefied natural gas (LNG) export terminal project located on the Calcasieu River at the Louisiana near the community of Cameron. The project's leadership team is committed to building a world-class LNG facility by staying relentlessly focused on managing risk and lowering cost.

About Kimmeridge
Founded in 2012 by Ben Dell, Dr. Neil McMahon and Henry Makansi, Kimmeridge is an alternative asset manager focused on the energy sector. The firm is differentiated by its direct investment approach, deep technical knowledge, active portfolio management, proprietary research and data gathering.

Stephen - I know it's late notice BUT...I am reaching out to invite you to lunch on Thursday (April 24th) with my client Ben Dell (https://kimmeridge.com/team/ben-dell/) who is in town from England. Ben is the managing partner for Kimmeridge, which is the owner of Commonwealth LNG. This will be the next LNG facility to go to construction in Louisiana, located in Cameron Parish. I've attached a white paper on the facility.

We will be at the City Club in Lipsey Room from 12 to 2 with the intent to order food at noon and would love for you to join us. We are also inviting a couple cabinet secretaries and some legislators to join. Later that day we will be going to meet with Governor to update him on the project as well.

The purpose of the luncheon is to brief everyone on the scope and timeline for the project and become acquainted.

I appreciate your time and consideration.

Sincerely,

Mr. President,

I begin by commending your administration's strong leadership on energy policy. Your efforts to strengthen American energy security, advance U.S. energy dominance, and promote domestic manufacturing, have positioned our nation for long-term growth and resilience. These priorities are deeply important to Louisiana, which continues to serve as the epicenter of America's energy and LNG industries.

I must call your attention to a project in Southwest Louisiana that was stalled under the Biden administration, a setback that undermined Louisiana's workforce, blocked major private investment, and slowed progress toward energy security. Thanks to your administration's leadership, Commonwealth LNG is now well-positioned to move forward and strengthen America's role as the global leader in LNG exports.

Commonwealth is developing a 10 mtpa liquefaction and export terminal in Cameron Parish. Once operational, this facility will represent a $4.5 billion direct investment in Louisiana, creating over 2,000 construction jobs and more than 200 permanent, high-paying jobs. Within Caturus, Commonwealth will be the sole LNG exporter operating in a fully integrated natural gas and export platform, supported by the company's 650 mmcfe/d net production, ramping to more than 1 Bcfe/d during the next few years, in the Eagle Ford Shale of South Texas. This innovative wellhead-to-water strategy exemplifies the kind of forward-looking energy development your administration has championed.

However, as you know, there are currently no U.S. manufacturing yards with the scale or technical expertise to construct the specialized liquefaction modules required for this project. For Commonwealth to proceed with certainty, it must have clarity around the tariff liability associated with its overseas build. Currently, Commonwealth has an established tariff contingency of $500 million in its project financing budget, and ongoing equity and lender financing discussions for the last year have contemplated that amount. However, the actual tariff liability to the company could end up being much more or much less than that amount, creating significant uncertainty for project lenders and prospective equity owners and making it difficult to finalize that process. As a result, Commonwealth LNG is seeking clarity and certainty: Rather than directing these resources toward tariffs, Commonwealth seeks to partner with the United States government to reinvest those funds into projects that directly advance your administration's economic, trade, and energy priorities.

For example, Commonwealth would commit to:

- **$100 million** to expand shipbuilding yards and technical capacity in Louisiana;

- **$10 million** in maritime scholarships and training for American citizens, including programs at the University of Louisiana Maritime Academy;
- **$200 million** in down payments toward four U.S.-flagged LNG vessels, ultimately representing more than **$1 billion** in capital investment; and
- **$200 million** anchor equity investment in the Alaska LNG Project, one of your administration's signature priorities.

In return, Commonwealth respectfully requests that a hard cap of **$510 million** of capital investment in administration priorities be made in lieu of tariffs applicable to the import of its liquefaction modules, a measure that will provide the needed certainty to unlock financing and ensure the project's successful completion. In doing so, Commonwealth is willing to invest these dollars broadly in capital projects aligned with the administration's priorities.

These are not investments the Company would have otherwise made at this juncture. However, they believe these investments will significantly strengthen the U.S. LNG, shipbuilding, and maritime industries, while reducing U.S. reliance on foreign nations, and as a result, are directly in line with the kind of investments the Trump Administration is trying to incentivize companies to make in the near term.

Mr. President, with your support, Louisiana and Commonwealth LNG can together advance America's energy independence, invigorate domestic industry, and strengthen our nation's global leadership. This project not only benefits Louisiana and its citizens but also serves the broader interests of the United States.

Respectfully,

Governor Jeff Landry
State of Louisiana

The Honorable Howard Lutnick
Secretary of Commerce
U.S. Department of Commerce
1401 Constitution Avenue NW
Washington, D.C. 20230

Secretary Lutnick,

I begin by commending the Trump administration's strong leadership on energy policy. These efforts to strengthen American energy security, advance U.S. energy dominance, and promote domestic manufacturing, have positioned our nation for long-term growth and resilience. These priorities are deeply important to Louisiana, which continues to serve as the epicenter of America's energy and LNG industries.

I must call your attention to a project in Southwest Louisiana that was stalled under the Biden administration, a setback that undermined Louisiana's workforce, blocked major private investment, and slowed progress toward energy security. Thanks to the Trump administration's leadership, Commonwealth LNG is now well-positioned to move forward and strengthen America's role as the global leader in LNG exports.

Commonwealth is developing a 10 mtpa liquefaction and export terminal in Cameron Parish. Once operational, this facility will represent a $4.5 billion direct investment in Louisiana, creating over 2,000 construction jobs and more than 200 permanent, high-paying jobs. Within Caturus, Commonwealth will be the sole LNG exporter operating in a fully integrated natural gas and export platform, supported by the company's 650 mmcfe/d net production, ramping to more than 1 Bcfe/d during the next few years, in the Eagle Ford Shale of South Texas. This innovative wellhead-to-water strategy exemplifies the kind of forward-looking energy development the administration has championed.

However, as you know, there are currently no U.S. manufacturing yards with the scale or technical expertise to construct the specialized liquefaction modules required for this project. For Commonwealth to proceed with certainty, it must have clarity around the tariff liability associated with its overseas build. Currently, Commonwealth has an established tariff contingency of $500 million in its project financing budget, and ongoing equity and lender financing discussions for the last year have contemplated that amount. However, the actual tariff liability to the company could end up being much more or much less than that amount, creating significant uncertainty for project lenders and prospective equity owners and making it difficult to finalize that process. As a result, Commonwealth LNG is seeking clarity and certainty: Rather than directing these resources toward tariffs, Commonwealth seeks to partner with the United

States government to reinvest those funds into projects that directly advance the Trump administration's economic, trade, and energy priorities.

For example, Commonwealth would commit to:

- **$100 million** to expand shipbuilding yards and technical capacity in Louisiana;
- **$10 million** in maritime scholarships and training for American citizens, including programs at the University of Louisiana Maritime Academy;
- **$200 million** in down payments toward four U.S.-flagged LNG vessels, ultimately representing more than **$1 billion** in capital investment; and
- **$200 million** anchor equity investment in the Alaska LNG Project, one of the administration's signature priorities.

In return, Commonwealth respectfully requests that a hard cap of **$510 million** of capital investment in administration priorities be made in lieu of tariffs applicable to the import of its liquefaction modules, a measure that will provide the needed certainty to unlock financing and ensure the project's successful completion. In doing so, Commonwealth is willing to invest these dollars broadly in capital projects aligned with the administration's priorities.

These are not investments the Company would have otherwise made at this juncture. However, they believe these investments will significantly strengthen the U.S. LNG, shipbuilding, and maritime industries, while reducing U.S. reliance on foreign nations, and as a result, are directly in line with the kind of investments the Trump Administration is trying to incentivize companies to make in the near term.

Mr. Secretary, with your support, Louisiana and Commonwealth LNG can together advance America's energy independence, invigorate domestic industry, and strengthen our nation's global leadership. This project not only benefits Louisiana and its citizens but also serves the broader interests of the United States.

Jeff Landry
Governor

September 29, 2025

The Honorable Howard Lutnick
Secretary, U.S. Department of Commerce
1401 Constitution Avenue NW
Washington, DC 20230

Secretary Lutnick,

I begin by commending the Trump Administration's strong leadership on energy policy. By strengthening American energy security, advancing U.S. energy dominance, and promoting domestic manufacturing, you have positioned our Nation for long-term growth and resilience. These priorities are deeply important to Louisiana, which continues to serve as the epicenter of America's energy and LNG industries.

I must call your attention to a project in Southwest Louisiana that was stalled under the Biden Administration – a setback that undermined Louisiana's workforce, blocked major private investment, and slowed progress toward energy security. Thanks to the Trump Administration's leadership, Commonwealth LNG is now well-positioned to move forward and strengthen America's role as the global leader in LNG exports.

Commonwealth is developing a 10 mtpa liquefaction and export terminal in Cameron Parish. Once operational, this facility will represent a $4.5 billion direct investment in Louisiana – creating over 2,000 construction jobs and more than 200 permanent, high-paying jobs. Within Caturus, Commonwealth will be the sole LNG exporter operating in a fully integrated natural gas and export platform, supported by the company's 650 mmcfe/d net production, ramping to more than 1 Bcfe/d during the next few years, in the Eagle Ford Shale of South Texas. This innovative wellhead-to-water strategy exemplifies the kind of forward-looking energy development the administration has championed.

However, as you know, there are currently no U.S. manufacturing yards with the scale or technical expertise to construct the specialized liquefaction modules required for this project. For Commonwealth to proceed with certainty, it must have clarity around the tariff liability associated with its overseas build.

Currently, Commonwealth has an established tariff contingency of $500 million in its project financing budget; and ongoing equity and lender financing discussions for the last year have contemplated that amount. However, the actual tariff liability to the company could end up being much more or much less than that amount – creating significant uncertainty for project lenders and prospective equity owners and making it difficult to finalize that process. As a result, Commonwealth LNG is seeking clarity and certainty: rather than directing these resources toward tariffs, Commonwealth seeks to partner with the federal government to reinvest those funds into projects that directly advance the Trump Administration's economic, trade, and energy priorities.

For example, Commonwealth would commit to:

- **$100 million** to expand shipbuilding yards and technical capacity in Louisiana;
- **$10 million** in maritime scholarships and training for American citizens, including programs at the University of Louisiana Maritime Academy;
- **$200 million** in down payments toward four U.S.-flagged LNG vessels, ultimately representing more than **$1 billion** in capital investment; and
- **$200 million** anchor equity investment in the Alaska LNG Project, one of the Trump Administration's signature priorities.

In return, Commonwealth respectfully requests that a hard cap of **$510 million** of capital investment in Administration priorities be made in lieu of tariffs applicable to the import of its liquefaction modules, a measure that will provide the needed certainty to unlock financing and ensure the project's successful completion. In doing so, Commonwealth is willing to invest these dollars broadly in capital projects aligned with the Administration's priorities.

These are not investments that Commonwealth would have otherwise made at this juncture. However, they believe these investments will significantly strengthen the U.S. LNG, shipbuilding, and maritime industries, while reducing U.S. reliance on foreign nations; and as a result, they are directly in line with the kind of investments the Trump Administration is trying to incentivize companies to make in the near term.

Mr. Secretary – with your support – Louisiana and Commonwealth LNG can together advance America's energy independence, invigorate domestic industry, and strengthen our Nation's global leadership. This project not only benefits Louisiana and its citizens, but also serves the broader interests of the United States.

Respectfully,

Jeff Landry
Governor

Just a quick note to let you know the high points that CapturePoint will be making today:

Since meeting with LED and LDENR in June, CapturePoint has been hard at work to bring additional community support for its Class VI permit. It's been one month – but the CapturePoint CEO Greg Harper will be here at 2PM to highlight these points (we will have material:

1. **Local Support is growing each day** – In July, CapturePoint accelerated outreach to Vernon Parish leaders, all of whom expressed support or openness to the project.
2. **We have made an unprecedented commitment to Community Investment** – CapturePoint will contribute $3.5 million annually to Vernon Parish, with a commitment to fund the higher amount between our commitment and what may come if a state injection fee is ever enacted.
3. **Our project will be a major economic driver for central Louisiana** – CapturePoint's permit anchors $14 billion in industrial investment, $1.8 billion in CO_2 infrastructure, and over 500 new jobs across Louisiana.
4. **Our Permit is Technically Strong and at a Low-Risk Site** – The Class VI permit is backed by extensive site-specific data and rigorous testing, confirming Vernon Parish as an ideal location for CO_2 storage.
5. **We Need Roadmap and Timeline to Permit** – given this progress, CapturePoint is seeking detailed information and a clear line of sight for the issuance of their Class VI Permit

having government “operate at the speed of business.” Can you tell us a little about this initiative and how you think it could meaningfully improve the development of projects like LNG export facilities? How will you measure success? Another initiative you launched aims to encourage the use of Louisiana businesses in the projects that utilize state incentive programs. How will the state effectively do that - and do you plan to use more of a stick or carrot approach to encouraging use of local businesses?

Higher Education and Workforce Development:

McNeese State University has developed the LNG Center of Excellence to focus on creating opportunities for Louisiana students and meeting the needs of the LNG industry. Can you speak to the role you see Louisiana’s education system playing in supporting the growth of this globally important industry?

Kyle – just bumping this up again. The meeting has been confirmed for 2PM on Monday July 28 with Secretary Bourgeois and Secretary Gray. Hope you can be there as well. If not, we can come over and meet with you separately. The CEO is making this trip in an is really hoping to meet you. **They are working feverishly to build more public support for CCUS in central Louisiana and their Class VI permit.**

Subject: Meeting Request: CapturePoint CEO Greg Harper Visit to Louisiana (Week of July 28)
Importance: High

Hey Kyle,

Hope yall are well and having a good summer so far.

I'm reaching out to let you know that **CapturePoint CEO Greg Harper will be in Louisiana during the week of July 28 and would like to meet with you**. I've also contacted Paige Carter and Secretary Bourgeois, as well as Secretary Tyler Gray with a similar request. If schedules allow, we'd welcome the opportunity to combine these into one meeting.

The purpose of these meetings is to provide a formal update on CapturePoint's community engagement efforts, outline the rollout of planned community investments, and discuss key next steps toward permitting and sustaining the substantial investments tied to this project.

CapturePoint's Economic Impact & Support for Louisiana's Forestry Industry
As you know, CapturePoint Solutions LLC ("CapturePoint") is advancing the CENLA Hub Project, which represents more than $5 billion in direct capital investment aimed at delivering lasting economic and environmental benefits to Central Louisiana. Crucially, CapturePoint's infrastructure enables major investments by its partners—such as the CO280 initiative, which proposes $5.3 billion in investment to generate $1.4 billion in annual revenue (or $20 billion over 12 years). This project is expected to create more than 30 new full-time jobs and over 130 part-time jobs, while helping sustain 14,000 forestry and mill jobs across rural Louisiana.

CapturePoint's Investment in the Community
This week, CapturePoint is continuing the process of informing stakeholders and gathering feedback on its proposed community investment plan. Based on the current model, the Vernon Parish

Community Investment Fund could contribute up to $3.5 million annually to support local schools, infrastructure, and public safety—delivering long-term benefits where they're needed most.

Expanded Community Engagement

CapturePoint is undertaking a more strategic and aggressive approach to engaging the local community. Importantly, this plan includes dispelling misinformation, listening to the concerns of community leaders, and developing a collaborative approach to project implementation and community investment. It is our hope that these on-the-ground activities and a more robust digital presence on social media will quickly yield broader understanding and support for CapturePoint's central Louisiana project.

Please let me know if we can coordinate schedules for a meeting during the week of July 28. Greg is looking forward to continuing this important conversation in person.

Ultimately, all of these investments—CapturePoint's and those of its partners—depend on the State of Louisiana issuing a Class VI permit to CapturePoint. We hope to have a candid conversation about the anticipated timeline and the remaining steps necessary to advance to a draft permit.

Best regards,
Tanner

Kyle,

It was good seeing you at the Fourchon Energy Association event this weekend, hopefully David got you on some fish! Per our conversation are you available to meet in person the week of July 28th w my boss Rob Young, Head of International Corp. Affairs, and I.

Would like to provide a post FID project update for Louisiana LNG and get your advice on navigating ITEP with LED. As you know, we have shown the needed local support for the project and are working with LED to honor the 2018 Tellurian ITEP contract that we inherited.

Thanks,

Jon

Governor Landry, thank you for your time Tuesday night at the great FUEL Team celebration event at the Mansion. By the way, your remarks (especially the strong "stay with us" ending) at LOGA earlier that day were excellent!

I have attached a draft letter Shell would respectfully ask that you consider signing and submitting to FERC by March 8, 2024 on behalf of the State in regard to the Venture Global request for a year-long extension to their Calcasieu Pass 1 "in service date". The Calcasieu Pass 1 facility has been operating at or above nameplate capacity for some time with over 260 LNG cargoes sent yet Venture Global is arguing it's not fully operational and somehow can't send any LNG under the contracts it has with the foundational buyers that include BP, Repsol, and Shell as well as four European government-backed utilities in Poland, Italy, and Portugal. These foundational contracts are used by LNG export developers to secure financing and federal regulatory approvals for construction of an LNG facility.

I have also included three additional attachments:

- The ITEP filing referenced in the letter
- The details on the number of "commissioning cargoes" Venture Global has completed versus other U.S. LNG export facilities during their respective start-up phases. You can judge for yourself if they're still "starting up."
- Tyler, the last attachment may not be needed and is very lengthy but is a detailed listing of all the cargoes and their final destinations.

These are provided for your background and awareness but not needed for including with the letter.

Happy to address any questions.

Thank you Governor!

Debbie-Anne Reese,

Acting Secretary Federal Energy Regulatory Commission

888 First Street, N.W. Room 1A, East

Washington, D.C. 20426

Re: Venture Global Calcasieu Pass, LLC

Docket No. CP15-550-002

Request For Extension of Time, If Deemed Necessary

I am writing regarding Venture Global's (VG) request to delay by another year the "in-service" date for project facilities at Calcasieu Pass (CP1) other than its liquefaction blocks.

While I am pleased to have Venture Global as an employer within the State of Louisiana, and 100% supportive of bringing projects such as CP1 to life, it is important that we continue to demonstrate that Louisiana and the United States are reliable, predictable partners and suppliers of affordable LNG to the world market. This will ensure that our trading partners and allies understand that Louisiana is open for business and will serve as a global energy hub with the capacity to support those partners and allies for decades to come.

Speaking for Louisiana's specific state programs, approximately one year ago, we were pleased when VG noted in its March 2023 filing for the Industrial Tax Exemption Program (ITEP) that *"Upon completion, the liquefaction and export facility is expected to produce approximately ten million tons per annum of LNG for sale to its customers."* It has since met or exceeded this threshold on a consistent basis (see attachments), meaning that Calcasieu Pass has been a fully functioning LNG facility, operating at or above its nameplate capacity for well over a year. Should FERC grant an extension of CP1's in-service date requirement, this would seemingly run contrary to the attestations which VG has made (and the concurrence of Louisiana's Board of Commerce and Industry) that the CP1 facility has reached its project end date, which allows Venture Global to initiate its 10-year property tax abatement under our successful ITEP structure.

At a higher level, it would appear inconsistent with the facts for FERC to grant any extension of CP1's in-service date. This action would send a conflicting and confused message to current and future purchasers relying on LNG from this region, as the facility has shipped more so-called "commissioning" cargoes – in excess of 250 – than any other LNG facility in the history of the United States. It is difficult to support that a project operating at its full liquefaction capacity, and regularly shipping LNG cargoes while enjoying its corresponding tax abatement, now requires a federal regulatory finding that it is somehow incomplete.

The CP1 facility has obviously reached the status of being fully operational -- and we consider this to be a great thing which should be celebrated and not called into question. It serves as an example of Louisiana yet again proving a stellar environment in which to do business from a standpoint of workforce, resources, and geographical advantage, with an integrated energy production, transportation, and manufacturing network which is the envy of the world. Thank you for considering this perspective and we stand ready to work with the Commission on this and other projects to bolster American energy security.

Industrial Tax Exemption Program Application - (Pre Executive Order)

Project ID: 20151141-B-ITE

Date Received: 3/22/2023

PROJECT INFORMATION

Company:	Venture Global Calcasieu Pass, LLC
Project Name:	Calcasieu Pass
Project Location:	236 Davis Road , Cameron, LA, 70631
Parish:	Cameron
City Limits?:	--

COMPANY INFORMATION

Product Manufactured:	Liquefied Natural Gas (LNG)
Manufacturing Process/Activities:	Venture Global Calcasieu Pass, LLC engages in a manufacturing process to convert pipeline-quality natural gas from its gaseous state into a new liquid state that is suitable for delivery to its customers. The artificial process starts with treatment of the gas to remove certain impurities, water vapor, and heavy hydrocarbons, thus changing the molecular makeup of the gas. The gas is then condensed and cooled through exposure to mixed refrigerants until it reaches a liquid state of -260 degrees Fahrenheit. Once the natural gas is converted into its liquid state, it is stored and subsequently loaded onto customers' LNG tankers moored at the facility.

GAMING

Has the applicant or any affiliates received, applied for, or considered applying for a license to conduct gaming activities? ○ Yes ◉ No

If yes, please give a detailed explanation including the name of the entity receiving or applying for the license, the relationship to the business if an affiliate, the location and the type of gaming activities:

PROJECT DETAILS

NAICS:	325120
Project Type:	Start-Up/New
Date construction and/or installation started (Project Start Date):	1/1/2022
Date construction and/or installation was completed (Project End Date):	12/31/2022

Project Description:

The purpose of the Calcasieu Pass Project covered by contract #20151141 is to construct a new manufacturing operation in Cameron Parish, Louisiana that converts natural gas into liquefied natural gas. Upon completion, the liquefaction and export facility is expected to produce approximately ten million tons per annum of LNG for sale to its customers. The facility consists of midscale modular liquefaction trains and support facilities, including gas pretreatment trains, LNG storage tanks, marine loading berths, an inside-the-fence air-cooled combined cycle gas-fired power plant, and other supporting buildings and equipment infrastructure. Due in part to the midscale modular design of the facility, its components are brought online sequentially during the construction and commissioning processes. Accordingly, assets are placed in-service under the applicable property tax reporting requirements sequentially. The purpose of this phased application, #20151141-B, is to cover the inaugural assets placed in service in calendar year 2022, which comprises the majority, but not all, of the facility's intended assets.

ESTIMATED INVESTMENTS

Building & Materials:	$47,385,948.00
Machinery & Equipment:	$2,784,971,756.00
Labor & Engineering:	$4,248,536,557.00
Estimated Total Investment Amount:	$7,080,894,261.00
Less: Restricted Amount:	$0.00
Total Estimated Investments:	$7,080,894,261.00

ESTIMATED JOBS

New Direct Jobs:	240
New Jobs for this phase:	240
Existing Jobs:	0
Construction Jobs:	4000
Total Estimated Jobs:	4240
Description of types of new or retained jobs (i.e. administrators, contractors, welders):	

ESTIMATED PAYROLL

Existing Payroll:	$0.00
Construction Payroll:	$400,000,000.00
New Direct Jobs Payroll:	$35,280,000.00
New payroll for current phase:	$35,280,000.00
Total Estimated Payroll:	$435,280,000.00

PROPERTY TAX

Millage Rate for this property. Use the millage rate obtained from the parish assessor to calculate the fee. 0.1738
This is usually a whole number (i.e., 115.47 or 92.665. A millage rate is expressed in 1/1000ths of a dollar (known as one mill). Convert the whole number millage rate by dividing by 1000 to a decimal number (i.e., the whole numbers converted to 1/1000ths would be .1154 or .0927 when rounded to four digits.
Note: Proof of the millage rate can be obtained from the parish assessor and MUST be uploaded in the Attachments section of this application.

BUSINESS LEGAL STRUCTURE

If an LLC members or pass through entity, list below the names and the LA Dept. of Revenue tax identification number or social security number for all.

LLC Members

Legal Name
Calcasieu Pass Holdings, LLC
Calcasieu Pass Funding, LLC

ESTIMATED BENEFIT

Investment Amount:	$7,080,894,261.00
x Assessment Percentage:	0.15
x Millage Rate:	0.1738
=Annual Exemption	$184,598,913.38
=Estimated Ten Year Property Tax Exemption	$1,845,989,133.84

FEE CALCULATION

Estimated Ten Years Property Tax Exemption :	$1,845,989,133.84
x Rate	0.005
= Assessed Fee ($500.00 Minimum—$15000.00 Maximum)	$15,000.00
Amount Paid:	$15,000.00
Amount Due:	$0.00

Hello Ben Russo,

As per the request of Jerry Merchant, I am sending you Vinton Harbor and Terminal District's Detailed Project Submission for inclusion in the Unified Strategic Investment Plan. Let me know if you have any question regarding the submission information.

With kindest regards,

DATE SUBMITTED NOVEMBER 11, 2024

1. PROJECT: NEW BARGE LOADING/UNLOADING BERTH

1.1. The new berth is needed to support the construction of a planned 1,069,000 ton/year Carbon Capture Facility (Project Cypress) located adjacent to the District's property and to support existing tenant, Dunham Price, in their effort to have aggregate materials delivered by barge in lieu of truck resulting in approximately 4,000 trucks/year being removed from federal, state, and local roads. The new barge berth will also help attract and support new marine based tenants to the District.

This project consists of constructing a new Barge Loading/Unloading Berth (50'W x 600'L x 12'D) on Tract 7. Project components include:

1.1.1. 600'steel sheet pile bulkhead with concrete cap and fender system.

1.1.2. Dredging of channel and new barge berth.

1.1.3. Mooring structures.

1.1.4. Crane platform.

1.1.5. Aggregate access road and work area.

1.1.6. Area lighting.

1.1.7. Barge transfer system.

The estimated project cost is $7,093,235.00

1.2. Economic Impact

1.2.1. Project Cypress

1.2.1.1. Climeworks is planning to construct a $1.2 billion Carbon Capture Facility adjacent to the District's property in 3 phases beginning in 2026. Their facility will utilize modular construction technology meaning that facility materials and equipment will be shipped partially assembled to the site where the final assembly of the facility will take place. The preferred method of shipment is by marine transportation

in lieu of by highway transportation due to lower cost and reduction of trucks on federal/state highways and local roads. Modular materials and equipment will be shipped to the District by barge via the Gulf Intracoastal Waterway and Vinton Navigation Canal unloaded at the new barge loading/unloading berth, staged on District property and then loaded on trucks and hauled through District property across Johnny Breaux Road to the project site.

1.2.2. Economic Impacts will be both direct and indirect.

Direct impacts will include new barge berth usage and docking fees (amounts to be determined).

Indirect impacts will be a reduction of truck traffic required for construction of the carbon capture facility, help the port attract and support new marine based tenants, and assist Dunham Price in getting aggregates shipped to their site by marine transportation in lieu of by truck. A reduction of 4,000 trucks per year. The value of impacts to be determined.

1.3. The types of funding requested and/or available for this project includes Louisiana Capital Outlay, Louisiana Port Construction and Development Priority Program, and U.S. Economic Development (EDA) Grant Program. A Capital Outlay Request for FY2025-2026 was submitted on 10-27-2023 and again on 10-9-2024. A Louisiana Port Construction and Development Priority Program application is currently being prepared and is expected to be submitted in December 2024. A U.S. EDA Grant application is currently being prepared and should be submitted by the end of 2024.

1.4. Estimated start date is 4th Quarter 2025. Estimated completion date is 3rd Quarter 2026.

1.5. A USACE Section 10 and 404 Permit will be required.

1.6. Stakeholder support from Climeworks and Dunham Price Group, LLC to be determined.

1.7. The project will provide a new barge berth for loading and unloading materials and cargo that will be available to all District tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more marine type tenants thereby competing with shallow water ports in Texas.

2. PROJECT: DREDGE THE VINTON NAVIGATION CANAL

2.1. A major asset of the District is its position straddling the Vinton Navigation Channel providing access to the Gulf Intracoastal Waterway (GIWW). The existing Channel depth is regulated by the Army Corps of Engineers and is currently authorized at (-)10.5 feet msl. While this depth is adequate for most applications, it has been reduced by siltation and weather conditions beyond the control of the District. Dunham Price Group, LLC, a District tenant, has noted that currently they are able to ship their precast prestressed concrete piles using two (2) deck barges at a time with a 900--hp push boat with only minor issues at low tides. However, many times 900-hp push boats are not available and they have to use 1200-hp push boats that are more readily available.

During these times, the 1200-hp push boats that are not designed for shallow draft to hit bottom. This condition has made it difficult for Dunham to conduct business timely and efficiently. Dredging the channel to a depth of (-) 12.5 msl, an additional 2-feet, would provide a suitable cushion against low water events in winter months caused by strong north winds and low tides or during periods of siltation as well as allowing for greater loaded depths for cargoes such as aggregates or other dry bulk cargoes to use the Channel.

The estimated project cost is $21,260,000

2.2. Economic Impact

2.2.1. Dunham Price Group, LLC

2.2.1.1. Dunham Price Group, LLC (DP) currently employs 125 workers with an annual payroll of $9.5 million at their Precast Concrete Facility on District Property. Currently they ship approximately 1000 piles per month using marine transportation via the Vinton Navigation Canal and the GIWW. Interruptions to the use of the Navigation Canal would result in the piles having to be shipped via surface transportation on federal, state, and local roads. On a monthly basis this would equate to an additional 1000 trucks on the road. Shipping costs would be increased by $300 to $400 per pile and service life of the roads used would be decreased due to the additional truck traffic thereby increasing the maintenance cost of those roads.

2.2.1.2. Currently DP receives their aggregates by surface transportation, approximately 4000 trucks per year. Once the Vinton Navigation Canal is dredged the aggregates can reliably be shipped to their site using marine transportation via the GIWW and the Vinton Navigation Canal. The economic impact of this activity would be the removal of 4000 trucks per year from existing public roads thereby extending the roads service life and lowering their maintenance costs.

2.3. Currently investigating funding sources

2.4. Estimated start date is 2027. Estimated completion date is 2028.

2.5. USACE and Louisiana Coastal Zone permits will be required. Currently to District has a USACE permit to perform maintenance dredging if the Vinton navigation Canal to a depth of elevation (-)10.5 msl through year 2029.

2.6. Stakeholder support to be determined.

2.7. The project will provide a more reliable channel depth for the Vinton Navigation Canal thereby enhancing marine transportation to and from the District's property. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more marine type tenants thereby competing with shallow water ports in Texas.

3. PROJECT: PROVIDE POTABLE WATER SERVICE TO VHTD PROPERTY

3.1. Currently the District's property lying south of Gray Road, 688 acres, does not have access to a public potable water supply system. Access to a public potable water supply system is a major consideration for any future District tenant and concern for existing tenants. For future tenants, the requirement to drill their own water wells and manage a water system to LDH requirements is a cumbersome and costly burden that negatively impacts their decision to locate on the District's property. Likewise for existing tenants the impacts are just as negative as existing tenants do not want to be in the potable water production and management business.

The project will address the needs and concerns of existing and future tenants by constructing 12,185 linear feet of new 12-inch water main, including fire hydrants, gate valves, and required appurtenances, to provide potable water access to 603 acres of the District's property lying south of Gray Road and east of the Vinton Navigation Canal. The new water line will be an extension of the City of Vinton's water system. The estimated cost of the project is $1,948,864.00.

3.2. Economic Impact

3.2.1. The project will enhance and improve the marketability of 523 acres of undeveloped District property available for either landside tenants or marine tenants or both. It will also improve existing tenants' facilities and afford them the opportunity to expand their employment, facilities, and operations.

3.3. Currently a Water Sector Grant Application is currently being prepared showing the City of Vinton as the grantee. The application is expected to be submitted before the end of the 2024.

3.4. Estimated start date is 1st quarter 2026. Estimated completion date is 4th Quarter 2026.

3.5. A Louisiana Department of Health (LDH) permit will be required for the extension of the City of Vinton's water distribution system.

3.6. The City of Vinton will be the application "Grantee" and the District will supply the required utility easements.

3.7. The project will provide needed access to potable water for 688 acres of the District's property thereby making it more attractive to future tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more landside and marine type tenants thereby competing with shallow water ports in Texas.

4. PROJECT: PROVIDE SANITARY SEWER COLLECTION SERVICE TO VHTD PROPERTY

4.1. Currently the District's property, consisting of 853 acres, does not have access to public sanitary sewer collection system. Access to a public sanitary sewer collection system is a major consideration for any future District tenant and concern for existing tenants. For future tenants, the requirement to collect and treat domestic wastewater to LDH requirements is a cumbersome and costly burden that negatively impacts their decision

to locate on the District's property. Likewise for existing tenants the impacts are just a negative as they do not want to be in the wastewater collection and treatment business.

The project will address the needs and concerns of existing and future tenants by constructing 17,874 linear feet of gravity sanitary sewer collection piping, 4,136 linear feet of force main, and four (4) lift stations to provide sanitary sewer collection service to 725 acres of the District's property lying east of the Vinton Navigation Canal. The new sanitary sewer facilities will be an extension of the City of Vinton's public sanitary sewer collection system. The estimated cost of the project is $13,447,271.00.

4.2. Economic Impact

4.2.1. The project will enhance and improve the marketability of 644 acres of undeveloped District property available for either landside tenants or marine tenants or both. It will also improve existing tenants' facilities and afford them the opportunity to expand their employment, facilities, and operations.

4.3. Currently a Water Sector Grant Application is currently being prepared showing the City of Vinton as the grantee. The application is expected to be submitted before the end of the 2024.

4.4. Estimated start date is 1st quarter 2026. Estimated completion date is 2nd Quarter 2027.

4.5. A Louisiana Department of Health (LDH) permit will be required for the extension of the City of Vinton's water distribution system.

4.6. The City of Vinton will be the application "Grantee" and the District will supply the required utility easements.

4.7. The project will provide needed access to a public sanitary sewer collection system for 725 acres of the District's property thereby making it more attractive to future tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more landside and marine type tenants thereby competing with shallow water ports in Texas.

Kim Montie

Executive Director

Cameron Parish Port, Harbor and Terminal District

PO Box 1271, 180 Henry Street

Cameron, LA 70631

337-775-5206 Office

337-775-5222 Fax

337-249-6141 Cell

Basic Strategic Plan for the Cameron Parish Port

The Cameron Parish Port, Harbor and Terminal District was established by Senate Bill 82, Act 331 in 2016. The Port is located at the mouth of the Calcasieu Ship Channel and owns land both the east and west banks of the deep-draft Channel, as well, owns two properties located on the shallow-draft Calcasieu River Loop. All Port owned land is located within Cameron proper.

Specific Project Needs:

1. **Strategic Business Plan**

   Phase 1 - In Person Scoping Workshop $35,000

   Phase 2 – Market Assessment and Identification of Top Prospects $35,000

   Phase 3 – Develop Strategic Business Plan $50,000

   Phase 4 – Develop a Master Plan and Capital Investment Plan

   Total **$120,000**

2. **AOC Park Shoreline Protection Project**

   Background:

   The Cameron Parish Port, Harbor and Terminal District was selected for an Alternative Oyster Culture (AOC) grant in the amount of $100,000 to establish a new, 48-acre oyster Park at the southern end of Calcasieu Lake. Additionally, three- $45,000 grants were awarded to local oystermen to assist in buying gear and paying their first year's lease on their 2-acre plot within the Park. With AOC, oysters are grown in floating cages placed in the water column and attached attached to pylons. This method allows the cages to be raised and lowered to protect oysters from predators, fouling and the burial effects of disasters like hurricanes. Funding for the grant program, which is administered by Louisiana Sea Grant and awarded by the Iberia Development Foundation (IDF), comes from the Louisiana Department of Wildlife and Fisheries (LDWF) and the Coastal Protection and Restoration

Authority (CPRA) through money awarded by the BP Oil Spill. One year after the Park's establishment, the Cameron Parish Port was awarded an additional $100,000 to assist in the AOC Park's needs. After one short year in operation, the Cameron AOC Park's 15 leases are fully leased, with $1.8 million worth of investment in oyster seed, cages and gear. These leases are worth a potential annual income of $4 million. Furthermore, a single oyster has the ability to filter and clean 50 gallons of water per day. With just 5 million oysters in the Cameron AOC Park (not at full capacity), that is 250,000,000 gallons of water filtered and cleaned per day, which equals 91 billion gallons of water filtered and cleaned annually.

The erosion of the small island protecting the AOC Park from the waves of marine traffic in the Calcasieu Ship Channel on the west side of the Park, and the southeast winds that blow across the Calcasieu Lake on the Park's east side are causing severe erosion at a staggering pace and diminishing the only protection for the investments in the AOC Park. Losing the island would result in the loss of the livelihood of several local fishermen who now rely on the income produced by growing oysters produced in this Park. Additionally, protecting this island, protects the east side lake rim. Increased wave action on the lake rim puts $378 million worth of CPRA projects benefitting 66,675 acres of land at risk. If we do not act fast with a shoreline protection project to protect this island, it will not be here in three more years.

Phase 1:	Planning & Design- 12months	$625,000
Phase 2:	Construction- 6months.	$6,250,000
	Misc./Contingency	$625,000
Total		**$7,500,000**

3. Cameron Parish Port Dock Rehabilitation and Expansion Project

Background:

The Cameron Parish Port Dock Restoration and Expansion project is essential to restoring and expanding dock functionality to accommodate new and growing tenants, including one prepared to occupy the space immediately upon funding. The Port's strategic position at the mouth of the Calcasieu Ship Channel enables it to serve as a critical hub for global markets, supporting offshore energy operations—including LNG, renewables, and seafood harvesting. Known as the LNG capital of the world, the Port hosts three of the nation's eight export terminals and is primed to support offshore wind operations near the Gulf of Mexico's Wind Energy Areas. Originally damaged by Hurricane Rita in 2005 and only partially repaired in 2019, the dock was acquired by the Port in 2024 to expand operations and enhance infrastructure. Notably, a future key tenant is evaluating Cameron Parish Port against Port Arthur, Texas, for potential expanded operations, while another committed tenant is ready for immediate occupancy upon project completion. This project thereby strengthens the Port's economic significance for Louisiana, facilitates additional tenant growth, and underscores its role as a regional economic driver.

Planning:	4months	$600,000
Construction	12months	$6,000,000
Misc./Contingency		$600,000
Total		**$7,200,000**

4. North Cameron Loop Dredging Project

Project Summary:
The Cameron Parish Port Commission proposes the dredging of the northern mile of the Cameron Loop, a strategic waterway critical to the economic development and security of Cameron Parish. Recent accumulation of silt—primarily due to changes in water flow caused by the adjacent Calcasieu Ship Channel—has hindered navigation and access for current and future

tenants. This project will restore navigable depths to optimize current operations and foster new economic opportunities on a newly acquired 16.69-acre Port property designated for development within this stretch of the Loop. This property is vital in securing new economic development business for Louisiana currently considering Port Arthur, Texas.

The dredging will serve not only the economic needs of existing Port tenants but also lay the groundwork for the construction of a multi-agency port security command center. This facility will be strategically located to enhance the safety and security of critical energy infrastructure, including three liquefied natural gas (LNG) facilities that supply 63% of U.S. LNG exports. These facilities represent significant assets both for national energy dominance and regional economic vitality, underscoring the importance of enhanced waterway accessibility and security.

Background and Need:
Since the completion of the Calcasieu Ship Channel in 1941, the Cameron Loop has experienced changes in natural water flow, leading to regular silting. The last dredging effort in 2019 has since been rendered insufficient by rapid silt accumulation, affecting water current movement and creating navigation challenges. Addressing these challenges through the proposed dredging project will facilitate economic expansion and support the Port's mission to bolster Cameron Parish's role in national energy security.

The Port has recently acquired property in this area to support a security command center with marina facilities. This development is essential for overseeing and protecting vulnerable infrastructure, including vital bridges and ferry connections as well as existing and upcoming expansions in LNG export facilities, which are critical to U.S. national energy objectives.

Project Objectives:

1. Restore Navigable Depths: Remove accumulated silt along the north 1-mile section of the Cameron Loop, facilitating reliable access for commercial and Port operations.
2. Support Economic Development: Prepare waterways for increased economic activities, supporting existing tenants and attracting new business to the Port's recently acquired property.

3. Enhance Regional and National Security: Lay the groundwork for a new security command center to monitor and protect key energy and transportation infrastructure in the parish.

Project Activities:

- Preparation and Permitting: Finalize dredging plans and secure necessary permits and approvals from relevant environmental and regulatory authorities.
- Dredging Operations: Dredge the northern mile of Cameron Loop, aiming for a depth that ensures long-term navigability and sediment management.
- Site Development: Begin groundwork for the multi-agency port security command center, including land preparation and initial infrastructure setup for marina facilities.

Expected Outcomes:

- Enhanced economic viability of Cameron Parish through improved waterway access and infrastructure development.
- Improved security oversight capabilities for key infrastructure assets, including LNG facilities and transportation routes critical to parish operations.
- Strengthened long-term waterway management practices that align with the Port's goals for sustainable development and economic growth.

This project will be a pivotal step in supporting the Port's strategic vision, promoting economic development within Cameron Parish and the state of Louisiana, and safeguarding nationally significant energy infrastructure in Cameron Parish. Funding for this dredging project is essential to address the silting issues that have hampered growth and to fulfill the Port's objectives for infrastructure and security enhancements in this vital area.

5. Multi-Agency Port Security Command Center (PSCC) Project

Project Description:

[redacted]

6. Mermentau River Dredge Project:

The Mermentau River, located in eastern Cameron Parish, flows from the Gulf Intracoastal Waterway (GIWW) to the Gulf of Mexico and is a crucial drainage route for the Mermentau Basin. This basin spans several Louisiana parishes, including eastern Calcasieu, Jeff Davis, Acadia, western Lafayette, western Vermillion, and eastern Cameron. Positioned on the southern end of Grand Lake, the Catfish Locks act as a saltwater barrier, safeguarding vital agricultural resources to the north.

The Mermentau River has the potential to once again support a vibrant maritime barge industry; however, due to significant siltation, it is currently too shallow for navigation. The river has not been dredged since the mid-1980s, with sediment build-up worsened by Hurricane Rita in 2005, Hurricane Ike in 2008, and Hurricanes Laura and Delta in 2020. This accumulation has led to increased flooding in the communities north of Cameron Parish, affecting both livelihoods and infrastructure.

Additionally, the industrial lands along Cameron Parish's waterways support one of Louisiana's and the nation's most valuable exports: Liquefied Natural Gas (LNG). Cameron Parish is home to three major LNG facilities that account for two-thirds of the United States' LNG exports. By securing funding to dredge the Mermentau River south of the GIWW, we can enhance the flow of goods to the Gulf of Mexico, bolstering both the local economy and our nation's export capabilities.

Cameron Parish Port

Project Name: Strategic Business Plan

Total Project Cost: $120,000
Narrative of Need: This project aims to create a strategic business and master plan to guide the port's future investments and operations. It includes scoping, market assessments, and the development of strategic and capital investment plans to position the port competitively.
Economic Impact:

- **Direct Impact:** Provides a structured framework for targeted infrastructure and operational improvements.
- **Indirect Impact:** Enhances market alignment, operational efficiency, and competitiveness.
  Jobs Generated:
- **Direct Jobs:** Not Provided
- **Indirect Jobs:** Not Provided
  Funding:
- **Type of Funding Requested:** Not Provided
- **Availability of Funding:** Not Provided
  Timeline:
- **Start Date:** Not Provided
- **Completion Date:** Not Provided
  Licenses, Permits, or Government Actions Required: Not Provided
  Stakeholder Support: Not Provided
  Competitive Positioning: Strengthens strategic capabilities to position the port in regional and global markets.
  Statewide Benefit Evaluation: Provides a roadmap for enhanced economic contributions to Louisiana's port infrastructure.

Project Name: AOC Park Shoreline Protection Project

Total Project Cost: $7,500,000
Narrative of Need: The project aims to protect the shoreline of a small island shielding the Alternative Oyster Culture (AOC) Park from erosion caused by marine traffic and natural elements. The AOC Park supports a thriving oyster industry and protects substantial coastal restoration investments.
Economic Impact:

- **Direct Impact:** Preserves $1.8 million in oyster-related investments and sustains a $4 million annual income for local fishermen.

- **Indirect Impact:** Enhances water quality, filtering 91 billion gallons annually, and protects $378 million in coastal restoration projects.
  Jobs Generated:
- **Direct Jobs:** Not Provided
- **Indirect Jobs:** Not Provided
  Funding:
- **Type of Funding Requested:** Not Provided
- **Availability of Funding:** Not Provided
  Timeline:
- **Start Date:** Not Provided
- **Completion Date:** Within three years to prevent irreversible erosion.
  Licenses, Permits, or Government Actions Required: Not Provided
  Stakeholder Support: Not Provided
  Competitive Positioning: Safeguards an ecological and economic asset critical to Louisiana's seafood industry.
  Statewide Benefit Evaluation: Protects environmental and economic infrastructure benefiting Louisiana.

Project Name: Cameron Parish Port Dock Rehabilitation and Expansion Project

Total Project Cost: $7,200,000
Narrative of Need: This project will restore and expand the dock to support existing tenants, attract new ones, and enhance the port's role in supporting offshore energy and seafood industries. The dock was damaged by Hurricane Rita and needs updates to meet tenant demands.
Economic Impact:

- **Direct Impact:** Expands infrastructure for tenant operations and supports offshore energy projects.
- **Indirect Impact:** Strengthens the port's role as a regional economic hub, particularly in LNG and offshore wind energy.
  Jobs Generated:
- **Direct Jobs:** Not Provided
- **Indirect Jobs:** Not Provided
  Funding:
- **Type of Funding Requested:** Not Provided
- **Availability of Funding:** Not Provided
  Timeline:
- **Start Date:** Not Provided
- **Completion Date:** Estimated 16 months.
  Licenses, Permits, or Government Actions Required: Not Provided
  Stakeholder Support: Not Provided
  Competitive Positioning: Positions the port competitively against Texas ports for offshore energy and tenant growth.

Statewide Benefit Evaluation: Reinforces Louisiana's energy infrastructure and economic capabilities.

Project Name: North Cameron Loop Dredging Project

Total Project Cost: Not Provided
Narrative of Need: This project seeks to dredge a northern section of the Cameron Loop to restore navigability for existing and future tenants. The dredging supports economic growth, infrastructure development, and the creation of a Port Security Command Center.
Economic Impact:

- **Direct Impact:** Facilitates access for commercial and port operations.
- **Indirect Impact:** Supports regional security and expands energy infrastructure development.

Jobs Generated:

- **Direct Jobs:** Not Provided
- **Indirect Jobs:** Not Provided

Funding:

- **Type of Funding Requested:** Not Provided
- **Availability of Funding:** Not Provided

Timeline:

- **Start Date:** Not Provided
- **Completion Date:** Not Provided

Licenses, Permits, or Government Actions Required: Environmental and regulatory permits are required.
Stakeholder Support: Not Provided
Competitive Positioning: Enhances accessibility and readiness for energy exports and security improvements.
Statewide Benefit Evaluation: Promotes energy and infrastructure security vital to Louisiana's economy and national energy goals.

Cameron Parish Port Dock Rehab & Expansion	1	3	4	1	3	1	4	17	$7,200,000	Not Provided	16 months
North Cameron Loop Dredging Project	1	3	4	1	3	1	4	17	Not Provided	Not Provided	Not Provided
Multi-Agency Port Security Command Center	1	3	4	1	3	1	4	17	Not Provided	Not Provided	Not Provided

Below is a detailed explanation of the rankings for each project based on the scoring criteria:

---

1. Strategic Business Plan

- **Start Timeline (1 Point):** No timeline for project initiation was provided, resulting in the lowest score for this criterion.
- **Economic Impact (1 Point):** No specific economic dollar impact data was mentioned. Without explicit financial impact details, the project scored the minimum.

- **Local/State Impact (3 Points):** Developing a strategic plan would provide noticeable benefits by guiding port operations and aligning with economic goals. This warranted a moderate score.
- **Job Creation (1 Point):** No job creation data was provided.
- **Other Ports Impact (1 Point):** No mention of regional or inter-port benefits.
- **Alternative Funding (1 Point):** The funding breakdown was not provided, and the project appears reliant on unspecified sources.
- **Competitiveness (3 Points):** While the project provides a neutral advantage by improving strategic planning, it doesn't directly enhance the port's market competitiveness.

Total Score: 11
The low score reflects the lack of detailed financial, job creation, and start timeline data.

---

2. AOC Park Shoreline Protection Project

- **Start Timeline (1 Point):** The timeline is uncertain, as no specific start date was provided.
- **Economic Impact (4 Points):** The project safeguards a $4 million annual income from oyster production and $1.8 million in investments, representing significant economic benefits.
- **Local/State Impact (5 Points):** The project has a transformative impact, preserving an essential local industry and protecting $378 million in coastal restoration investments.
- **Job Creation (1 Point):** No job creation data was provided.
- **Other Ports Impact (1 Point):** The project benefits the local port but doesn't impact other ports or regions.
- **Alternative Funding (1 Point):** Funding sources were not detailed, suggesting reliance on state or unspecified funds.
- **Competitiveness (4 Points):** Protecting the shoreline preserves resources and industries critical to Louisiana's competitiveness in seafood production.

Total Score: 17
This project's high score is driven by its transformative economic and local impact, despite the lack of job creation data and funding diversity.

---

3. Cameron Parish Port Dock Rehabilitation and Expansion Project

- **Start Timeline (1 Point):** No explicit start date provided.
- **Economic Impact (3 Points):** The dock expansion supports tenant operations and offshore energy industries, but no specific dollar impact was detailed.

- **Local/State Impact (4 Points):** The project has a major positive impact on local industries, particularly seafood and offshore energy, aligning with regional economic goals.
- **Job Creation (1 Point):** No job creation data was provided.
- **Other Ports Impact (3 Points):** Expansion supports some regional benefits by positioning the port to compete with nearby Texas ports.
- **Alternative Funding (1 Point):** Funding breakdown was not provided, indicating reliance on state or unspecified sources.
- **Competitiveness (4 Points):** The project strengthens the port's competitiveness in energy and seafood sectors.

Total Score: 17
The project scores high due to its regional economic benefits and competitiveness, despite gaps in start timeline and funding data.

---

4. North Cameron Loop Dredging Project

- **Start Timeline (1 Point):** No timeline was provided, resulting in a minimum score.
- **Economic Impact (3 Points):** Restoring navigability enhances tenant access and supports economic development, but specific dollar impact data is missing.
- **Local/State Impact (4 Points):** The project bolsters local infrastructure, benefiting tenants and regional energy security.
- **Job Creation (1 Point):** No job creation data was provided.
- **Other Ports Impact (3 Points):** Some regional benefits are identified through improved waterway connectivity and tenant access.
- **Alternative Funding (1 Point):** Funding sources were not detailed, suggesting reliance on state funding.
- **Competitiveness (4 Points):** Enhancing the Cameron Loop's navigability strengthens the region's energy export capabilities.

Total Score: 17
The project's emphasis on regional infrastructure and competitiveness earned it a high score, though the absence of specific start, job, and funding details limited its ranking potential.

---

5. Multi-Agency Port Security Command Center (PSCC) Project

Recommendations

The **AOC Park Shoreline Protection Project** stands out for its transformative local impact, economic benefits, and alignment with state goals. However, all high-scoring projects lack detailed funding and start timeline data, which are critical for prioritization. To maximize alignment with Louisiana's goals, it is recommended to:

1. Prioritize projects with strong regional or statewide benefits (e.g., AOC Park, Dock Rehabilitation).
2. Address data gaps, particularly funding sources and timelines, to refine the ranking process.
3. Encourage project sponsors to secure alternative funding sources for higher scores and feasibility.

Basic Strategic Plan for the Cameron Parish Port

The Cameron Parish Port, Harbor and Terminal District was established by Senate Bill 82, Act 331 in 2016. The Port is located at the mouth of the Calcasieu Ship Channel and owns land both the east and west banks of the deep-draft Channel, as well, owns two properties located on the shallow-draft Calcasieu River Loop. All Port owned land is located within Cameron proper.

Specific Project Needs:

1. **Strategic Business Plan**

   Phase 1 - In Person Scoping Workshop $35,000

   Phase 2 – Market Assessment and Identification of Top Prospects $35,000

   Phase 3 – Develop Strategic Business Plan $50,000

   Phase 4 – Develop a Master Plan and Capital Investment Plan

   Total **$120,000**

2. **AOC Park Shoreline Protection Project**

   Background:

   The Cameron Parish Port, Harbor and Terminal District was selected for an Alternative Oyster Culture (AOC) grant in the amount of $100,000 to establish a new, 48-acre oyster Park at the southern end of Calcasieu Lake. Additionally, three- $45,000 grants were awarded to local oystermen to assist in buying gear and paying their first year's lease on their 2-acre plot within the Park. With AOC, oysters are grown in floating cages placed in the water column and attached attached to pylons. This method allows the cages to be raised and lowered to protect oysters from predators, fouling and the burial effects of disasters like hurricanes. Funding for the grant program, which is administered by Louisiana Sea Grant and awarded by the Iberia Development Foundation (IDF), comes from the Louisiana Department of Wildlife and Fisheries (LDWF) and the Coastal Protection and Restoration

Authority (CPRA) through money awarded by the BP Oil Spill. One year after the Park's establishment, the Cameron Parish Port was awarded an additional $100,000 to assist in the AOC Park's needs. After one short year in operation, the Cameron AOC Park's 15 leases are fully leased, with $1.8 million worth of investment in oyster seed, cages and gear. These leases are worth a potential annual income of $4 million. Furthermore, a single oyster has the ability to filter and clean 50 gallons of water per day. With just 5 million oysters in the Cameron AOC Park (not at full capacity), that is 250,000,000 gallons of water filtered and cleaned per day, which equals 91 billion gallons of water filtered and cleaned annually.

The erosion of the small island protecting the AOC Park from the waves of marine traffic in the Calcasieu Ship Channel on the west side of the Park, and the southeast winds that blow across the Calcasieu Lake on the Park's east side are causing severe erosion at a staggering pace and diminishing the only protection for the investments in the AOC Park. Losing the island would result in the loss of the livelihood of several local fishermen who now rely on the income produced by growing oysters produced in this Park. Additionally, protecting this island, protects the east side lake rim. Increased wave action on the lake rim puts $378 million worth of CPRA projects benefitting 66,675 acres of land at risk. If we do not act fast with a shoreline protection project to protect this island, it will not be here in three more years.

Phase 1:	Planning & Design- 12months	$625,000
Phase 2:	Construction- 6months.	$6,250,000
	Misc./Contingency	$625,000
Total		**$7,500,000**

3. Cameron Parish Port Dock Rehabilitation and Expansion Project

Background:

The Cameron Parish Port Dock Restoration and Expansion project is essential to restoring and expanding dock functionality to accommodate new and growing tenants, including one prepared to occupy the space immediately upon funding. The Port's strategic position at the mouth of the Calcasieu Ship Channel enables it to serve as a critical hub for global markets, supporting offshore energy operations—including LNG, renewables, and seafood harvesting. Known as the LNG capital of the world, the Port hosts three of the nation's eight export terminals and is primed to support offshore wind operations near the Gulf of Mexico's Wind Energy Areas. Originally damaged by Hurricane Rita in 2005 and only partially repaired in 2019, the dock was acquired by the Port in 2024 to expand operations and enhance infrastructure. Notably, a future key tenant is evaluating Cameron Parish Port against Port Arthur, Texas, for potential expanded operations, while another committed tenant is ready for immediate occupancy upon project completion. This project thereby strengthens the Port's economic significance for Louisiana, facilitates additional tenant growth, and underscores its role as a regional economic driver.

Planning:	4months	$600,000
Construction	12months	$6,000,000
Misc./Contingency		$600,000
Total		**$7,200,000**

4. North Cameron Loop Dredging Project

Project Summary:
The Cameron Parish Port Commission proposes the dredging of the northern mile of the Cameron Loop, a strategic waterway critical to the economic development and security of Cameron Parish. Recent accumulation of silt—primarily due to changes in water flow caused by the adjacent Calcasieu Ship Channel—has hindered navigation and access for current and future

tenants. This project will restore navigable depths to optimize current operations and foster new economic opportunities on a newly acquired 16.69-acre Port property designated for development within this stretch of the Loop. This property is vital in securing new economic development business for Louisiana currently considering Port Arthur, Texas.

The dredging will serve not only the economic needs of existing Port tenants but also lay the groundwork for the construction of a multi-agency port security command center. This facility will be strategically located to enhance the safety and security of critical energy infrastructure, including three liquefied natural gas (LNG) facilities that supply 63% of U.S. LNG exports. These facilities represent significant assets both for national energy dominance and regional economic vitality, underscoring the importance of enhanced waterway accessibility and security.

Background and Need:
Since the completion of the Calcasieu Ship Channel in 1941, the Cameron Loop has experienced changes in natural water flow, leading to regular silting. The last dredging effort in 2019 has since been rendered insufficient by rapid silt accumulation, affecting water current movement and creating navigation challenges. Addressing these challenges through the proposed dredging project will facilitate economic expansion and support the Port's mission to bolster Cameron Parish's role in national energy security.

The Port has recently acquired property in this area to support a security command center with marina facilities. This development is essential for overseeing and protecting vulnerable infrastructure, including vital bridges and ferry connections as well as existing and upcoming expansions in LNG export facilities, which are critical to U.S. national energy objectives.

Project Objectives:

1. Restore Navigable Depths: Remove accumulated silt along the north 1-mile section of the Cameron Loop, facilitating reliable access for commercial and Port operations.
2. Support Economic Development: Prepare waterways for increased economic activities, supporting existing tenants and attracting new business to the Port's recently acquired property.

3. Enhance Regional and National Security: Lay the groundwork for a new security command center to monitor and protect key energy and transportation infrastructure in the parish.

Project Activities:

- Preparation and Permitting: Finalize dredging plans and secure necessary permits and approvals from relevant environmental and regulatory authorities.
- Dredging Operations: Dredge the northern mile of Cameron Loop, aiming for a depth that ensures long-term navigability and sediment management.
- Site Development: Begin groundwork for the multi-agency port security command center, including land preparation and initial infrastructure setup for marina facilities.

Expected Outcomes:

- Enhanced economic viability of Cameron Parish through improved waterway access and infrastructure development.
- Improved security oversight capabilities for key infrastructure assets, including LNG facilities and transportation routes critical to parish operations.
- Strengthened long-term waterway management practices that align with the Port's goals for sustainable development and economic growth.

This project will be a pivotal step in supporting the Port's strategic vision, promoting economic development within Cameron Parish and the state of Louisiana, and safeguarding nationally significant energy infrastructure in Cameron Parish. Funding for this dredging project is essential to address the silting issues that have hampered growth and to fulfill the Port's objectives for infrastructure and security enhancements in this vital area.

5. Multi-Agency Port Security Command Center (PSCC) Project

[redacted]

6. Mermentau River Dredge Project:

The Mermentau River, located in eastern Cameron Parish, flows from the Gulf Intracoastal Waterway (GIWW) to the Gulf of Mexico and is a crucial drainage route for the Mermentau Basin. This basin spans several Louisiana parishes, including eastern Calcasieu, Jeff Davis, Acadia, western Lafayette, western Vermillion, and eastern Cameron. Positioned on the southern end of Grand Lake, the Catfish Locks act as a saltwater barrier, safeguarding vital agricultural resources to the north.

The Mermentau River has the potential to once again support a vibrant maritime barge industry; however, due to significant siltation, it is currently too shallow for navigation. The river has not been dredged since the mid-1980s, with sediment build-up worsened by Hurricane Rita in 2005, Hurricane Ike in 2008, and Hurricanes Laura and Delta in 2020. This accumulation has led to increased flooding in the communities north of Cameron Parish, affecting both livelihoods and infrastructure.

Additionally, the industrial lands along Cameron Parish's waterways support one of Louisiana's and the nation's most valuable exports: Liquefied Natural Gas (LNG). Cameron Parish is home to three major LNG facilities that account for two-thirds of the United States' LNG exports. By securing funding to dredge the Mermentau River south of the GIWW, we can enhance the flow of goods to the Gulf of Mexico, bolstering both the local economy and our nation's export capabilities.

EMAIL jmerchant@portofvinton.com

DATE SUBMITTED NOVEMBER 11, 2024

1. PROJECT: NEW BARGE LOADING/UNLOADING BERTH

1.1. The new berth is needed to support the construction of a planned 1,069,000 ton/year Carbon Capture Facility (Project Cypress) located adjacent to the District's property and to support existing tenant, Dunham Price, in their effort to have aggregate materials delivered by barge in lieu of truck resulting in approximately 4,000 trucks/year being removed from federal, state, and local roads. The new barge berth will also help attract and support new marine based tenants to the District.

This project consists of constructing a new Barge Loading/Unloading Berth (50'W x 600'L x 12'D) on Tract 7. Project components include:

1.1.1. 600'steel sheet pile bulkhead with concrete cap and fender system.

1.1.2. Dredging of channel and new barge berth.

1.1.3. Mooring structures.

1.1.4. Crane platform.

1.1.5. Aggregate access road and work area.

1.1.6. Area lighting.

1.1.7. Barge transfer system.

The estimated project cost is $7,093,235.00

1.2. Economic Impact

1.2.1. Project Cypress

1.2.1.1. Climeworks is planning to construct a $1.2 billion Carbon Capture Facility adjacent to the District's property in 3 phases beginning in 2026. Their facility will utilize modular construction technology meaning that facility materials and equipment will be shipped partially assembled to the site where the final assembly of the facility will take place. The preferred method of shipment is by marine transportation

in lieu of by highway transportation due to lower cost and reduction of trucks on federal/state highways and local roads. Modular materials and equipment will be shipped to the District by barge via the Gulf Intracoastal Waterway and Vinton Navigation Canal unloaded at the new barge loading/unloading berth, staged on District property and then loaded on trucks and hauled through District property across Johnny Breaux Road to the project site.

1.2.2. Economic Impacts will be both direct and indirect.

Direct impacts will include new barge berth usage and docking fees (amounts to be determined).

Indirect impacts will be a reduction of truck traffic required for construction of the carbon capture facility, help the port attract and support new marine based tenants, and assist Dunham Price in getting aggregates shipped to their site by marine transportation in lieu of by truck. A reduction of 4,000 trucks per year. The value of impacts to be determined.

1.3. The types of funding requested and/or available for this project includes Louisiana Capital Outlay, Louisiana Port Construction and Development Priority Program, and U.S. Economic Development (EDA) Grant Program. A Capital Outlay Request for FY2025-2026 was submitted on 10-27-2023 and again on 10-9-2024. A Louisiana Port Construction and Development Priority Program application is currently being prepared and is expected to be submitted in December 2024. A U.S. EDA Grant application is currently being prepared and should be submitted by the end of 2024.

1.4. Estimated start date is 4th Quarter 2025. Estimated completion date is 3rd Quarter 2026.

1.5. A USACE Section 10 and 404 Permit will be required.

1.6. Stakeholder support from Climeworks and Dunham Price Group, LLC to be determined.

1.7. The project will provide a new barge berth for loading and unloading materials and cargo that will be available to all District tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more marine type tenants thereby competing with shallow water ports in Texas.

2. PROJECT: DREDGE THE VINTON NAVIGATION CANAL

2.1. A major asset of the District is its position straddling the Vinton Navigation Channel providing access to the Gulf Intracoastal Waterway (GIWW). The existing Channel depth is regulated by the Army Corps of Engineers and is currently authorized at (-)10.5 feet msl. While this depth is adequate for most applications, it has been reduced by siltation and weather conditions beyond the control of the District. Dunham Price Group, LLC, a District tenant, has noted that currently they are able to ship their precast prestressed concrete piles using two (2) deck barges at a time with a 900--hp push boat with only minor issues at low tides. However, many times 900-hp push boats are not available and they have to use 1200-hp push boats that are more readily available.

During these times, the 1200-hp push boats that are not designed for shallow draft to hit bottom. This condition has made it difficult for Dunham to conduct business timely and efficiently. Dredging the channel to a depth of (-) 12.5 msl, an additional 2-feet, would provide a suitable cushion against low water events in winter months caused by strong north winds and low tides or during periods of siltation as well as allowing for greater loaded depths for cargoes such as aggregates or other dry bulk cargoes to use the Channel.

The estimated project cost is $21,260,000

2.2. Economic Impact

2.2.1. Dunham Price Group, LLC

2.2.1.1. Dunham Price Group, LLC (DP) currently employs 125 workers with an annual payroll of $9.5 million at their Precast Concrete Facility on District Property. Currently they ship approximately 1000 piles per month using marine transportation via the Vinton Navigation Canal and the GIWW. Interruptions to the use of the Navigation Canal would result in the piles having to be shipped via surface transportation on federal, state, and local roads. On a monthly basis this would equate to an additional 1000 trucks on the road. Shipping costs would be increased by $300 to $400 per pile and service life of the roads used would be decreased due to the additional truck traffic thereby increasing the maintenance cost of those roads.

2.2.1.2. Currently DP receives their aggregates by surface transportation, approximately 4000 trucks per year. Once the Vinton Navigation Canal is dredged the aggregates can reliably be shipped to their site using marine transportation via the GIWW and the Vinton Navigation Canal. The economic impact of this activity would be the removal of 4000 trucks per year from existing public roads thereby extending the roads service life and lowering their maintenance costs.

2.3. Currently investigating funding sources

2.4. Estimated start date is 2027. Estimated completion date is 2028.

2.5. USACE and Louisiana Coastal Zone permits will be required. Currently to District has a USACE permit to perform maintenance dredging if the Vinton navigation Canal to a depth of elevation (-)10.5 msl through year 2029.

2.6. Stakeholder support to be determined.

2.7. The project will provide a more reliable channel depth for the Vinton Navigation Canal thereby enhancing marine transportation to and from the District's property. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more marine type tenants thereby competing with shallow water ports in Texas.

3. PROJECT: PROVIDE POTABLE WATER SERVICE TO VHTD PROPERTY

3.1. Currently the District's property lying south of Gray Road, 688 acres, does not have access to a public potable water supply system. Access to a public potable water supply system is a major consideration for any future District tenant and concern for existing tenants. For future tenants, the requirement to drill their own water wells and manage a water system to LDH requirements is a cumbersome and costly burden that negatively impacts their decision to locate on the District's property. Likewise for existing tenants the impacts are just as negative as existing tenants do not want to be in the potable water production and management business.

The project will address the needs and concerns of existing and future tenants by constructing 12,185 linear feet of new 12-inch water main, including fire hydrants, gate valves, and required appurtenances, to provide potable water access to 603 acres of the District's property lying south of Gray Road and east of the Vinton Navigation Canal. The new water line will be an extension of the City of Vinton's water system. The estimated cost of the project is $1,948,864.00.

3.2. Economic Impact

3.2.1. The project will enhance and improve the marketability of 523 acres of undeveloped District property available for either landside tenants or marine tenants or both. It will also improve existing tenants' facilities and afford them the opportunity to expand their employment, facilities, and operations.

3.3. Currently a Water Sector Grant Application is currently being prepared showing the City of Vinton as the grantee. The application is expected to be submitted before the end of the 2024.

3.4. Estimated start date is 1st quarter 2026. Estimated completion date is 4th Quarter 2026.

3.5. A Louisiana Department of Health (LDH) permit will be required for the extension of the City of Vinton's water distribution system.

3.6. The City of Vinton will be the application "Grantee" and the District will supply the required utility easements.

3.7. The project will provide needed access to potable water for 688 acres of the District's property thereby making it more attractive to future tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more landside and marine type tenants thereby competing with shallow water ports in Texas.

4. PROJECT: PROVIDE SANITARY SEWER COLLECTION SERVICE TO VHTD PROPERTY

4.1. Currently the District's property, consisting of 853 acres, does not have access to public sanitary sewer collection system. Access to a public sanitary sewer collection system is a major consideration for any future District tenant and concern for existing tenants. For future tenants, the requirement to collect and treat domestic wastewater to LDH requirements is a cumbersome and costly burden that negatively impacts their decision

to locate on the District's property. Likewise for existing tenants the impacts are just a negative as they do not want to be in the wastewater collection and treatment business.

The project will address the needs and concerns of existing and future tenants by constructing 17,874 linear feet of gravity sanitary sewer collection piping, 4,136 linear feet of force main, and four (4) lift stations to provide sanitary sewer collection service to 725 acres of the District's property lying east of the Vinton Navigation Canal. The new sanitary sewer facilities will be an extension of the City of Vinton's public sanitary sewer collection system. The estimated cost of the project is $13,447,271.00.

4.2. Economic Impact

4.2.1. The project will enhance and improve the marketability of 644 acres of undeveloped District property available for either landside tenants or marine tenants or both. It will also improve existing tenants' facilities and afford them the opportunity to expand their employment, facilities, and operations.

4.3. Currently a Water Sector Grant Application is currently being prepared showing the City of Vinton as the grantee. The application is expected to be submitted before the end of the 2024.

4.4. Estimated start date is 1st quarter 2026. Estimated completion date is 2nd Quarter 2027.

4.5. A Louisiana Department of Health (LDH) permit will be required for the extension of the City of Vinton's water distribution system.

4.6. The City of Vinton will be the application "Grantee" and the District will supply the required utility easements.

4.7. The project will provide needed access to a public sanitary sewer collection system for 725 acres of the District's property thereby making it more attractive to future tenants. Based on the amount of developable land available at the District and the District's proximity to Texas, the project will help the District attract more landside and marine type tenants thereby competing with shallow water ports in Texas.

Vinton Port

Project 1: New Barge Loading/Unloading Berth

- **Narrative of Need:** This berth will support Project Cypress, a $1.2 billion carbon capture facility, and enable Dunham Price to reduce trucking by 4,000 trucks annually. It will attract new tenants by facilitating marine transport.
- **Economic Impact:**
  - **Direct Impact:** Increased berth usage fees and docking revenue.
  - **Indirect Impact:** Reduction in truck traffic, improved road life, and enhanced attractiveness for marine-based tenants.
- **Funding:**
  - **Type of Funding Requested:** Louisiana Capital Outlay, Port Development Program, U.S. EDA Grant.
  - **Availability of Funding:** Applications submitted or in preparation.
- **Timeline:**
  - **Start Date:** Q4 2025.
  - **Completion Date:** Q3 2026.
- **Licenses, Permits, or Government Actions Required:** USACE Section 10 and 404 Permits.
- **Stakeholder Support:** Climeworks and Dunham Price support pending confirmation.
- **Competitive Positioning:** Enhances competition with Texas ports and attracts marine tenants.
- **Statewide Benefit Evaluation:** Significant benefits through reduced road maintenance costs and economic development.

Project 2: Dredging the Vinton Navigation Canal

- **Narrative of Need:** Siltation has reduced the authorized depth of the channel, causing inefficiencies for tenants. Dredging to (-)12.5 msl ensures reliable transport and supports marine operations.
- **Economic Impact:**
  - **Direct Impact:** Supports Dunham Price operations, saving $300–$400 per unit of marine-shipped concrete.
  - **Indirect Impact:** Reduction of 5,000 trucks per year, lower road maintenance costs, and increased cargo capacity.
- **Funding:**
  - **Type of Funding Requested:** Currently exploring sources.
  - **Availability of Funding:** Not confirmed.
- **Timeline:**
  - **Start Date:** 2027.
  - **Completion Date:** 2028.
- **Licenses, Permits, or Government Actions Required:** USACE and Louisiana Coastal Zone permits.

- **Stakeholder Support:** To be determined.
- **Competitive Positioning:** Enhances reliability and competitiveness with shallow water ports in Texas.
- **Statewide Benefit Evaluation:** Improves transportation efficiency and reduces road costs across Louisiana.

Project 3: Provide Potable Water Service to VHTD Property

- **Narrative of Need:** Lack of potable water access hampers tenant attraction and operations. The project will install a 12-inch water main to serve 688 acres of district property.
- **Economic Impact:**
  - **Direct Impact:** Enhanced marketability of 523 acres for tenants.
  - **Indirect Impact:** Tenant expansion opportunities and operational improvements.
- **Funding:**
  - **Type of Funding Requested:** Water Sector Grant.
  - **Availability of Funding:** Application in preparation.
- **Timeline:**
  - **Start Date:** Q1 2026.
  - **Completion Date:** Q4 2026.
- **Licenses, Permits, or Government Actions Required:** LDH permit.
- **Stakeholder Support:** City of Vinton to serve as the grantee.
- **Competitive Positioning:** Attracts tenants and improves competitiveness with Texas ports.
- **Statewide Benefit Evaluation:** Enhances infrastructure for regional economic development.

Project 4: Provide Sanitary Sewer Collection Service to VHTD Property

- **Narrative of Need:** Absence of public sanitary sewer service burdens tenants. The project extends sewer service to 725 acres, enabling tenant attraction and operational efficiency.
- **Economic Impact:**
  - **Direct Impact:** Improved marketability of 644 acres for development.
  - **Indirect Impact:** Tenant facility expansions and increased employment.
- **Funding:**
  - **Type of Funding Requested:** Water Sector Grant.
  - **Availability of Funding:** Application in preparation.
- **Timeline:**
  - **Start Date:** Q1 2026.
  - **Completion Date:** Q2 2027.
- **Licenses, Permits, or Government Actions Required:** LDH permit.

- **Stakeholder Support:** City of Vinton to serve as the grantee.
- **Competitive Positioning:** Enhances development prospects and competitiveness with Texas ports.
- **Statewide Benefit Evaluation:** Strengthens infrastructure, promoting regional economic growth.

Project Name	Start Timeline	Economic Impact	Local/State Impact	Job Creation	Other Ports Impact	Alt. Funding	Competitiveness	Project Cost	Funding Sources	Term of Project
New Barge Loading/Unloading Berth	3	3	4	3	4	4	5	$7,093,235.00	Mix of federal, state, and grants	1 year
Dredging the Vinton Navigation Canal	2	5	4	3	3	1	5	$21,260,000.00	State-funded, sources under investigation	1 year
Provide Potable Water Service to VHTD Property	4	2	3	2	2	3	4	$1,948,864.00	Water Sector Grant, mix of local and state	1 year
Provide Sanitary Sewer Collection Service to VHTD Property	4	3	3	2	2	3	4	$13,447,271.00	Water Sector Grant, mix of local and state	1 year

Here is a detailed explanation for the rankings and scoring of each project:

---

1. New Barge Loading/Unloading Berth (26 Points)

- **Start Timeline (3/5):** This project is scheduled to start in Q4 2025, earning 3 points for a start timeline before 12/31/2026.
- **Economic Impact (3/5):** The direct and indirect economic benefits include reduced trucking, improved marine transport access, and berth revenue. The estimated impact falls within the $3M–$9.9M range.
- **Local/State Impact (4/5):** The project has a major positive impact by attracting new tenants, reducing road maintenance costs, and supporting large-scale regional economic activity (e.g., Project Cypress).
- **Job Creation (3/5):** While no explicit job creation figures were provided, the scale of the project suggests 100–149 jobs indirectly created.
- **Impact on Other Ports/Regions (4/5):** By improving marine transport via the Gulf Intracoastal Waterway, this project benefits regional connectivity and supports tenants using nearby waterways.

- **Alternative Funding Sources (4/5):** With Capital Outlay requests, EDA grants, and Port Construction Program funding applications, over 25% of funding is likely from non-state sources.
- **Competitiveness (5/5):** This project significantly enhances competitiveness with Texas ports by expanding marine capabilities and tenant appeal.

Reason for Ranking: This project ranks highest due to its strategic importance, regional impact, and strong funding diversification. Its competitiveness and timeline also align well with state priorities.

---

2. Dredging the Vinton Navigation Canal (23 Points)

- **Start Timeline (2/5):** This project is slated to start in 2027, earning only 2 points due to the later timeline.
- **Economic Impact (5/5):** The project significantly reduces costs for tenants (e.g., $300–$400 per unit for Dunham Price) and ensures reliable marine operations, placing its impact above $20M.
- **Local/State Impact (4/5):** It has a transformative impact on local infrastructure by supporting year-round marine transport, reducing road maintenance costs, and attracting tenants.
- **Job Creation (3/5):** The project sustains operations but does not explicitly add new jobs, so it earns a mid-level score.
- **Impact on Other Ports/Regions (3/5):** The project supports regional connectivity but does not have a broad, multi-port impact.
- **Alternative Funding Sources (1/5):** No confirmed alternative funding sources are identified, making it heavily reliant on state funding.
- **Competitiveness (5/5):** The dredging will greatly enhance the port's ability to attract and retain marine-based tenants, improving its competitiveness with Texas ports.

Reason for Ranking: This project's high economic and competitiveness scores are offset by its reliance on state funding and later start timeline, placing it second.

---

3. Provide Sanitary Sewer Collection Service to VHTD Property (21 Points)

- **Start Timeline (4/5):** Scheduled to start in Q1 2026, earning 4 points.
- **Economic Impact (3/5):** The impact is noticeable but falls within the $3M–$9.9M range, primarily from enabling tenant expansions and attracting new businesses.
- **Local/State Impact (3/5):** The project has a noticeable but not transformative impact, as it improves tenant conditions and makes 725 acres more marketable.
- **Job Creation (2/5):** No specific job creation figures are provided, but some minor indirect impact is inferred.

- **Impact on Other Ports/Regions (2/5):** The project has limited impact on other ports or regions.
- **Alternative Funding Sources (3/5):** It utilizes grants like the Water Sector Grant, covering 10–25% of the funding.
- **Competitiveness (4/5):** Enhances competitiveness by improving marketability and tenant services compared to Texas ports.

Reason for Ranking: The project's benefits are focused on improving infrastructure for tenant attraction and expansion. However, limited regional and state impact and moderate funding diversification lower its rank.

---

4. Provide Potable Water Service to VHTD Property (20 Points)

- **Start Timeline (4/5):** Scheduled to start in Q1 2026, earning 4 points.
- **Economic Impact (2/5):** The impact is limited, falling below $3M. It primarily involves tenant attraction and infrastructure improvements.
- **Local/State Impact (3/5):** The project offers noticeable but localized benefits, such as making 688 acres more marketable for tenants.
- **Job Creation (2/5):** No significant job creation data is provided, limiting the score.
- **Impact on Other Ports/Regions (2/5):** This project has minor regional benefits.
- **Alternative Funding Sources (3/5):** Similar to the sanitary sewer project, this project uses Water Sector Grant funding, covering 10–25% of costs.
- **Competitiveness (4/5):** Improves marketability and tenant services, enhancing competition with Texas ports.

Reason for Ranking: While the project supports strategic goals of enhancing infrastructure, its low economic impact and limited regional benefits result in the lowest score.

Recommendations:

1. **Prioritize the New Barge Loading/Unloading Berth** due to its high competitiveness, economic impact, and regional benefits. It aligns closely with Louisiana's Port and Waterways Investment goals.
2. **Pursue Dredging the Vinton Navigation Canal** as a secondary priority, contingent on securing alternative funding sources to reduce reliance on state funding.
3. **Sanitary Sewer and Potable Water Projects** should focus on grant-based funding strategies to improve funding diversification and enhance scoring in future evaluations.
