

Since 2018, Aypa Power has been operating energy storage and clean energy projects to build more resilient communities and move our nation toward energy independence. Today, we operate over 35 energy projects across North America, with an additional 22 gigawatts of projects in various stages of development or construction.

Aypa Power has proposed to build the Cajun Crescent Energy Center, a state-of-the-art, 375-megawatt solar facility located in Calcasieu and Jefferson Davis Parishes. Together, we're building a more reliable and affordable power grid while strengthening the Southwest Louisiana economy.

Local Tax Revenue

An estimated $87.2+ Million* in new tax revenue will flow into Calcasieu Parish and Jefferson Davis Parish, funding that can be used to support local community needs.

*30-year estimate, subject to change.

Global Competitiveness

Southwest Louisiana is increasingly looking to solar and other zero-emissions energy projects to stay competitive in the global market. By integrating renewables into its energy framework, the region attracts international investment and strengthens its position as a hub for major employers in manufacturing and the traditional oil, gas, and power industries. At a time when businesses are seeking innovative solutions to strengthen their supply chains, clean energy is emerging as a critical resource.

“In almost every project – expansion, new business, greenfield, brownfield – their request is ‘Can we get lower carbon or no carbon energy?’ – these

“LAIA does not see solar and a threat to traditional fossil energy production. Alternative sources are seen as complime established energy source

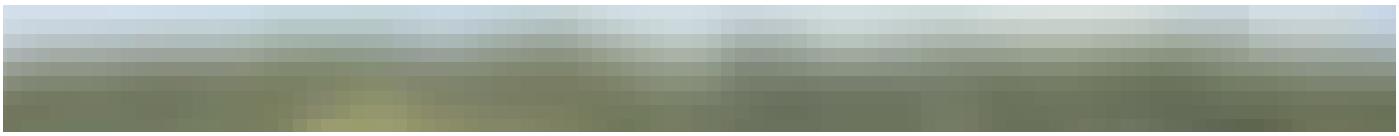

folks have commitments that they've made, and so they need clean, renewable energy. The best way for us to do that at this time is through solar. That's the lowest cost … Not only do I believe it's an efficient and economic way to serve load; it also is an enabler of new economic growth.

Transformative Tax Revenue Boost

Throughout its lifespan, the Cajun Crescent Energy Center is projected to generate an impressive
$87.2+ million* in local net tax revenue—over 250 times more than the current estimate if the site remains unchanged! This substantial influx of funds can be utilized by local Police Juries, School Boards, and Sheriffs to bolster essential public services, including education, infrastructure, public safety, and other community needs, thereby significantly enhancing the quality of life for residents.

Frequently Asked Questions

- Who will own and operate this project? +
- Where will this project be located? +
- How visible will this project be, and will I be able to see it? +
- How will the local community benefit from this project? +
- When will project construction begin? +

- What measures are in place in the event of extreme weather? +
- How will stormwater runoff be managed? +
- Do solar facilities affect local temperatures? +
- How much noise does solar equipment generate during operation? +
- How will this project prevent and/or mitigate glare? +
- How do electromagnetic fields (EMF) from solar compare to common sources of EMF? +
- Do solar panels pose environmental risks? +
- What measures are being taken to protect and preserve local wildlife? +
- Will this project impact local property values? +
- How does the project decommissioning process work? +
- What steps are being taken for the responsible reuse/recycling of the project's solar panels? +
- Can land used for solar be restored for farming and agricultural uses? +
- How can I reach someone at Aypa with more questions? +
